Foreword	v
Acknowledgments	vii
Introduction	1
Production methods and cultural practices	3
Requirements, objectives and benefits of mechanization	11
Problems associated with the introduction of mechanization	15
Labor and power requirements for producing rice	21
Water control	27
Co-operation between agricultural engineers and other to increase rice production	29
1. Power Sources	30
Manpower	30
Animal power	31
Engines and tractors	36
2. Tillage	46
Objectives	46
Primary tillage	47
Secondary tillage	59
3. Planting techniques and equipment	69
Direct seeding versus transplanting	69
Plant population and spacing	70
Obtaining uniform stands	71
Direct seeding	72
Transplanting	77
4. Fertilizer Applicators	85
Recommended practices	85
Applying fertilizers by hand	86
Equipment for distributing fertilizers	86
5. Equipment and Techniques for Weed Control	91
Weed control methods	91
Effect of weeds on rice yields	92
Hand tools and implements for weeding	92
Animal-powered implements for weeding	93
Tractor-powered weeding equipment	97
Chemicals for weed control	97
6. Sprayers and Dusters	98
Selecting equipment	99
Hand sprayers	100
Engine-powered sprayers	101
Dusters	103
Aerial application of sprays and dusts	103
7. Harvesting and threshing	105
Factors affecting the method of harvest	105
Harvesting (cutting and collecting the straw)	114

	Drying before threshing	120
	Threshing	121
	Combine harvesters	133
8.	Grain Cleaning and Drying Equipment	140
	Winnowing	140
	Rice drying	142
9.	Transportation Requirements and Equipment	149
	Operations requiring transport	149
	Types of containers	150
	Types of transport equipment	151
	References	155
