Preface by the Editor	ix
PART I THE PLANT COMPONENT	
1. Classification of the Legumes	3
2. Some Aspects of Mineral Nutrition in Legumes	15
3. The Effect of Aluminium on Legume Nutrition	43
4. The Effect of Climatic Conditions on Aluminium and Manganese Toxicities	62
5. The Interaction of Copper and Phosphorus in Legume Nutrition	69
PART II THE RHIZOBIAL COMPONENT	
6. The Classification of the Rhizobia	75
7. The Physiology of Nodule Formation	87
8. Survival of the Root Nodule Bacteria	108
9. The Legume-Rhizobia Symbiosis	124
PART III THE SYMBIOTIC SYSTEM	
10. Some Factors Affecting the Uptake of Nitrogen by Legumes	137
11. Lime in Relation to the Nodulation of Tropical Legumes	164
12. Nutritional Factors Affecting Nodulation	183
13. Some Factors Affecting Nodulation in the Tropics	202
14. Symbiotic Nitrogen Fixation by Non-legumes	216
15. Regent Belgian Studies on Symbiosis	232
PART IV BIOCHEMICAL ASPECTS	
16. Some Biochemical Aspects of Nitrogen Fixation	239
17. Transport of Amino Acids in Leguminous Plants	256
18. The Effect of Iron Deficiency on the Amino-Acid Metabolism of Yellow Lupin	266
PART V FIELD ASPECTS	
19. The Selection of Lucerne for Tolerance to Manganese Toxicity	277
20. Field Observations of Copper Deficiency in Legumes	280
21. The Effect of Translocated Herbicides on Rhizobia and the Nodulation of legumes	284
22. Phosphate-Dissolving Micro-Organisms in the Rhizosphere of Legumes	289
23. The Growth of a Clover Sward	295
24. The Role of Legumes in farm Ecology	308
PART VI DEMONSTRATIONS	
25. Demonstrations	
Levels of Adaptation in Symbiosis	325
Root Hair Infection in <i>Trifolium Parviflorum</i>	325
Water Culture of Seedlings in Growth Rooms	325
Methods Used in the Netherlands for the Production of Legume Inoculants	328
Bacteriology of the Genus <i>Rhizonium</i>	333
Distribution of Manganese and Aluminium in Lucerne Clones in Relation to the Degree of Tolerance to Toxicity	340
Effect of Nutrient and Osmotic Factors on Fruiting in Sweet Peas	341
List of Members	343
Author Index	349
Plant Index	355
General Index	357
