Introductory Remarks	1
SESSION I – Potentials for Soybean Production and Use as Related to World Protein Needs	2
Soybean production in the World : limitations and potentials	2
Soybean acceptability and consumer adoptability in relation to food habits in different parts of the world	20
Soybeans as a source of protein for human feeding in Latin America	28
Specific protein deficiencies and needs in Africa	38
Protein needs and its deficiency in Asia	46
SESSION II – Nutritional and Chemical Studies	64
Dietary protein quality in malnourished infants : Soy proteins	64
Formulated soy beverages for infants and preschool children	67
Soybean protein in mixed foods	75
Iodine, vitamins, minerals, and phytic acid as related to soybean protein	81
Physiological effects of soybean fractions	94
Isolation and characterization of flavor and flatulence factors in soybean meal	100
Trypsin inhibitors, hemagglutinin, saponins and isoflavones of soybeans	112
SESSION III – Manufactured Soy Products	129
Defatted and full-fat soy flours by conventional processes	129
Soy protein concentrates and isolates	142
Alternative processes for full-fat soy flours for use in developing countries	156
Meat analogues from modified vegetable tissues	163
Fermented products—miso, sufu, and tempeh	170
SESSION IV – Marketing and Use of Soybean Protein Products in Various Countries	181
Taiwan program—extruded full-fat soy flour	181
Feeding of infants with full-fat soybean-rice foods	183
Marketing soy protein products and problems of acceptance in foreign countries	195
Problems associated with marketing low-cost soy foods in Colombia	205
Potentials in marketing of soy foods	213
Role of the United Nations in the industrial advancement of developing countries	216
Program for furthering the production of soybeans in India by the University of Illinois	221
Potential and use of soy Protein for low-cost infant foods in India	223
Banquet Address : Closing the Protein Gap	225
