1.	Algal Systems – from Pilot to Field Scale Applications	
	Algal Production – Problems, achievements and potential	1
	The scope of microalgae for food and feed	9
	Research and development in applied algology and the protein shortage problem	21
2.	Algal Biomass Production Systems	
	Microalgae production systems in Asia	25
	Production and processing of algae in pilot plant scale experiences of the Indo-German Project	35
	Product and use of Spirulina in Mexico	51
	Environmental limitation in outdoor production of algal biomass	65
	Algal mass cultivation experiments in South Africa	73
	Rural oriented fresh water cultivation and production of algae in India	81
	Production and development of Chlorella and Spirulina in Taiwan	97
	Microalgal biomass production in Thailand	115
	Production and ecological implications of algae mass culture under Peruvian Conditions	123
3.	Combined Algae Production and Wastewater Treatment Systems	
	Pond isolation and phase isolation for control of suspended solids concentration in sewage oxidation pond effluents	135
	Algal mass production as an integral part of a wastewater treatment and reclamation system	163
	The production of microalgae on human wastes and their harvest by herbivorous fish	191
	Factors limiting algal growth in high rate oxidation ponds	205
	Recent trends in the research on wastewater reclamation by photosynthetic bacterial and algal systems	217
	An integrated microalgae system	229
	Controlling algal genera in high rate wastewater oxidation ponds	245
	First results of outdoor treatment of pig manure with algal-bacterial systems	255
4.	Biomass Production of Marine Algae	
	Mass culture of algae : a bottleneck in the nursery culturing of molluscs	265
	American experience in the mass culture of micro-algae for feeding larvae of the American oyster, <i>Crassostrea Virginica</i>	287
	A simple and inexpensive system for continuous monoxenic culture of <i>Brachionus plicatilis</i> Muller as a basis for mass production	307
	Heated and unheated outdoor cultures of marine algae with animal manure	315
5.	Physiological and Environmental Factors Affecting Algal Systems	
	Physiological aspects in algal mass cultures	343
	Modelling of algal production systems	361
	Temperature as an important climatic factor during mass production of microscopic algae	385
	Alkalinity induced aggregate formation in <i>Chlorella vulgaris</i>	401
	Time measurements in unicellular algae and its influence on productivity	411
	Effect of heterotrophic bacteria on the green algae growing in wastewater	421
	Fresh water cyanophyte toxins : Types and their effects on the use of microalgae biomass	437
	Physiological responses of <i>Anacystis nidulans</i> to Phenyl mercury acetate	449
6.	Pond Operations, Harvesting and Processing of Algae	
	Development of microalgae harvesting and high-rate pond technologies in California	457
	An optimization model for high-rate algae ponds	497
	Air-lift pumps and the effect of mixing on algal growth	505
	Alternative operating strategies for high-rate sewage oxidation ponds	523

Recovery of sewage-borne algae : Flocculation, and centrifugation techniques	531
Experiences and strategies in the recovery of biomass from mass cultures of microalgae	547
Thermal dewatering of algal slurries	573
Microalgae as a source of chemicals and natural products	575
Glycerol, β -carotene and dry algal meal production by commercial cultivation of <i>Dunaliella</i>	603
Products and chemicals from <i>Spirulina platensis</i>	611
Some considerations on the production of lipid substances by microalgae and cyanobacteria	619
Phytoplankton lipids : environmental influences on production and possible commercial applications	627
Toxicological and nutritional considerations in evaluating new feed ingredients	647
Protein nutritive value of several microalgae species for young chickens and rats	655
Nutritional evaluation of the microalgae <i>Scenedesmus ubliquus</i> and <i>Spirulina platensis</i> by protein synthesis in vitro in rat skeletal muscle and liver	661
The nutritional and economic value of algae poultry	667
Studies on some physico-chemical properties on commercial cultivated chlorella powder	687
Microalgae grown in wastewater as an ingredient in the diet of warm water fish	697
Use of continuous culture techniques to control nutritional quality	707
Influence of ammonium and nitrate on protein content, amino acid pattern, storage and fine structure of <i>Chlorella 8H</i> Recovering from N-starvation	723
Studies on some nutritive effects of the green algae <i>scenedesmus acutus</i> with pigs andbroilers	733
A nutritional ecosystem model to conserve nutrients for man	745
Certain contaminants in algae and in animals fed algae-containing diets, and secondary toxicity of the algae	757
Comparative toxicological studies with algae in India, Thailand and Peru	767
Review of the Nutritional and toxicological properties of the green alga <i>Scenedesmus obliquus</i> as a singel cell protein	787
Economic aspects of algal animal food production	799
