

CONTENTS

I. ANATOMY AND PHYSIOLOGY OF THE UDDER	
Anatomy of the Udder	1
Physiology of lactation	7
II. ENGINEERING ASPECTS	
History and Development	12
Action of the Milking Machine	21
The Modern Milking Machine	26
Design and Construction of Components	29
Installation and Mechanical Maintenance	49
III. USE OF THE MILKING MACHINE	56
Action of the Milking Machine	57
Operation of Milking Machines	70
Milking Machine Equipment	81
Organization of machine Milking	83
IV. MILKING MACHINES AND MASTITIS	104
Milking by Hand and Machine	107
Types of Milking Machines	109
Comparisons between Milking Machines	111
Injury to the Teat	113
Vacuum Level	116
Pulsators	120
Air Admission Holes	121
Teat-cup Liner	122
Stripping by Hand and Machine	124
Duration of Milking	126
Hygiene	127
Electric Shocks	135
Summary and Discussion	136

V. HYGIENE	160
Use of Detergents	161
Sterilization by Heat	163
Sterilization by Chemicals	166
Immersion Cleaning	175
Combined use of Heat and Chemicals	177
Care of Rubber	178
Descaling	182
Vacuum line	183
Bacteriological Testing	184
VI. RUBBER	
Molecular Make-up	186
Manufacture	189
Properties of Rubber	190
Ageing of Rubber	190
Deterioration of Liners	192
Future Developments	194
