PART I: MILK

	1
1. Composition, Structure, and Properties	3
1.1 Composition and Structure	3
1.1.1 Principal Components	3
1.1.2 Structure	4
1.2 Some Properties	7
1.2.1 Density	9
1.2.2 Acidity	10
1.2.3 Redox Potential	12
1.3 Variability	13
1.3.1 Sources of Variation	14
1.3.2 Nature of the Variation	19
1.3.3 Some Important Variables	22
1.4 Changes	24
Suggested Literature	26
2. Milk Components	27
2.1 Carbohydrates	27

2.1.1	Chemical Properties of Lactose	27
2.1.2	Physicochemical Aspects of Lactose	29
2.1.3	Lactic Acid Fermentation	37
2.2	Salts	37
2.2.1	Composition and Distribution Among the Phases	37
2.2.2	Properties of the Salt Solution	41
2.2.3	Colloidal Calcium Phosphate	45
2.2.4	Changes in Salts	46
2.3	Lipids	50
2.3.1	Composition	51
2.3.2	Some Properties	53
2.3.3	Autoxidation	58
2.3.4	Crystallization	63
2.4	Proteins	71
2.4.1	Chemistry of Proteins	71
2.4.2	Survey of Milk Proteins	77
2.4.3	Serum Proteins	82
2.4.4	Casein	86
2.5	Enzymes	91
2.5.1	Enzyme Activity	93
2.5.2	Some Milk Enzymes	94
2.5.3	Inactivation	97
2.6	Other Components	99
2.6.1	Natural Components	99
2.6.2	Contaminants	101
2.6.3	Radionuclides	102
2.6.4	Flavor Compounds	103
	Suggested Literature	104
3.	Colloidal Particles of Milk	107
3.1	Fat Globules	107
3.1.1	Properties	107
3.1.2	Emulsion Stability	112
3.1.3	Interactions with Air Bubbles	117
3.1.4	Creaming	119
3.1.5	Lipolysis	122
3.2	Casein Micelles	125
3.2.1	Description	125
3.2.2	Changes	129
3.2.3	Colloidal Stability	135
3.3	Physical Properties	143
3.3.1	Optical Properties	143

3.3.2	Viscosity (η)	145
	Suggested Literature	147
4.	Microbiology of Milk	149
4.1	General Aspects	149
4.1.1	Growth	150
4.1.2	Milk as a Substrate for Bacteria	153
4.2	Undesirable Microorganisms	158
4.2.1	Spoilage Microorganisms	158
4.2.2	Pathogenic Microorganisms	163
4.3	Sources of Contamination	165
4.3.1	Microorganisms Present in the Udder	165
4.3.2	Contamination During and After Milking	166
4.4	Hygienic Measures	168
4.4.1	Protection of the Consumer Against Pathogenic Microorganisms	169
4.4.2	Measures Against Spoilage Organisms	169
	Suggested Literature	170
 PART II: PROCESSES		 171
5.	General Aspects	173
5.1	Introduction	173
5.2	Quality Assurance	176
5.2.1	Concepts	176
5.2.2	HACCP	178
5.2.3	Quality Assurance of Raw Milk	179
5.3	Milk Storage and Transport	181
5.3.1	Milk Collection and Reception	181
5.3.2	Milk Storage	182
5.3.3	Transport of Milk in the Dairy	185
5.4	Standardizing	186
	Suggested Literature	187
6.	Heat Treatment	189
6.1	Objectives	190
6.2	Changes Caused by Heating	190
6.2.1	Overview of Changes	190
6.2.2	Reactions of Proteins	194
6.2.3	Reactions of Lactose	198
6.2.4	Heat Coagulation	200
6.3	Heating Intensity	206

6.3.1	Processes of Different Intensity	208
6.3.2	Kinetic Aspects	209
6.3.3	Thermobacteriology	216
6.3.4	Inactivation of Enzymes	223
6.4	Methods of Heating	226
6.4.1	Considerations	226
6.4.2	Equipment	227
6.4.3	Heat Regeneration	232
6.4.4	Control	234
6.5	Appendix: Heat Transfer	235
	Suggested Literature	239
7	Centrifugation	241
	Bactofugation	244
8.	Homogenization	245
8.1	Objectives	245
8.2	Operation of the Homogenizer	246
8.3	Theory of Kolmogorov	249
8.4	Factors Affecting the Fat Globule Size	253
8.5	Surface Layers	255
8.6	Stability	257
8.7	Homogenization Clusters	259
8.8	Other Effects of Homogenization	260
8.9	Creaming	261
8.10	Other Ways of Working	262
	Suggested Literature	264
9.	Concentration Process	265
9.1	General Aspects	265
9.1.1	Concentration of Solutes	265
9.1.2	Water Activity	269
9.1.3	Changes Caused by Concentrating	271
9.1.4	Reaction Rates	271
9.2	Evaporating	274
9.3	Drying	281
9.3.1	Objectives	281
9.3.2	Drying Methods	283
9.3.3	Atomization	285
9.3.4	Change of State of the Drying Air	289
9.3.5	Changes of State of the Drying Droplets	293
9.3.6	Two-Stage Drying	301
9.4	Membrane Processes	303

9.4.1	Ultrafiltration	305
9.4.2	Reverse Osmosis	314
9.4.3	Electrodialysis	317
	Suggested Literature	319
10.	Cooling and Freezing	321
10.1	Cooling	321
10.2	Freezing	322
	Suggested Literature	323
11.	Lactic Fermentations	325
11.1	Lactic Acid Bacteria: Types	326
11.1.1	Sugar Metabolism	326
11.1.2	Type of Lactic Acid Formed	335
11.1.3	Citrate Metabolism	335
11.1.4	Production of Acetaldehyde	336
11.1.5	Growth in Milk and Stimulation of Growth	336
11.1.6	Proteolytic and Lipolytic Activities	338
11.1.7	Formation of Polysaccharides	338
11.1.8	Plasmid-Encoded Properties	338
11.2	Acid Production	339
11.3	Bacteriophages	341
11.3.1	Phage Growth in the Bacterial Cell	342
11.3.2	Structure and Function	344
11.3.3	Cell Wall Resistance and Restriction	345
11.3.4	Inactivation	347
11.4	Starters	347
11.4.1	Composition	347
11.4.2	Properties	349
11.4.3	Shifts in the Flora	351
11.4.4	Aspects of Traditional Starter Manufacture	353
11.4.5	Applications in the Dairy Industry	354
	Suggested Literature	362
12.	Fouling, Cleaning, and Disinfection	363
12.1	Deposit Formation	363
12.2	Cleaning	369
12.3	Disinfection	370
	Suggested Literature	372
13.	Packing	373
	Suggested Literature	379

PART III: MILK PRODUCTS	381
14. Milk for Liquid Consumption	383
14.1 Pasteurized Milk	384
14.1.1 Manufacture	384
14.1.2 Shelf Life	390
14.1.3 Use of Microfiltration	393
14.2 Sterilized Milk	393
14.2.1 Description	393
14.2.2 Methods of Manufacture	395
14.2.3 Shelf Life	399
14.3 Flavor	400
14.4 Nutritive Value	401
Suggested Literature	404
15. Cream Products	405
15.1 Sterilized Cream	405
15.1.1 Manufacture	406
15.1.2 Heat Stability	406
15.1.3 Stability in Coffee	408
15.1.4 Clustering	408
15.2 Whipping Cream	410
15.2.1 Desirable Properties	411
15.2.2 Manufacture	411
15.2.3 The Whipping Process	413
15.2.4 Variables	414
15.3 Ice Cream	416
15.3.1 Manufacture	417
15.3.2 Physical Structure: Formation and Stability	420
15.3.3 Role of the Various Components	423
Suggested Literature	424
16. Concentrated Milks	425
16.1 Evaporated Milk	425
16.1.1 Description	425
16.1.2 Manufacture	426
16.1.3 Organoleptic Properties	430
16.1.4 Heat Stability	431
16.1.5 Creaming	432
16.1.6 Age Thickening and Gelation	433
16.2 Sweetened Condensed Milk	435
16.2.1 Description	435
16.2.2 Manufacture	436

16.2.3	Microbial Spoilage	439
16.2.4	Chemical Deterioration	440
16.2.5	Lactose Crystals	441
	Suggested Literature	443
17.	Milk Powder	445
17.1	Objectives	445
17.2	Manufacture	446
17.3	Hygienic Aspects	449
17.3.1	Bacteria in the Original Milk	450
17.3.2	Growth During Manufacture	452
17.3.3	Incidental Contamination	453
17.3.4	Sampling and Checking	454
17.4	Physical Properties	455
17.5	Ease of Dispersing; Instant Powder	457
17.6	Influence of Process Variables on Product Properties	459
17.6.1	Flavor	459
17.6.2	WPN Index	459
17.6.3	Insolubility	461
17.6.4	Specific Volume	462
17.6.5	Free Flowingness	463
17.6.6	Free Fat Content	463
17.6.7	Dispersibility	464
17.6.8	Stability	464
17.6.9	Conclusion	464
17.7	Deterioration	464
17.8	Other Types of Milk Powder	469
17.9	Reconstituted Products	469
	Suggested Literature	470
18.	Protein Preparations	471
18.1	Introduction	471
18.2	Manufacturing Processes	472
18.2.1	Casein	474
18.2.2	Whey Protein (WP) Concentrates and WP Complexes	474
18.2.3	Lactalbumin	475
18.2.4	Coprecipitate	476
18.2.5	Separation and Modification	476
18.3	Functional Properties	477
18.3.1	Solubility	478
18.3.2	Gelling Properties	479
18.3.3	Swelling	479
18.3.4	Viscosity of Solutions	479

	18.3.5 Emulsifier Properties	479
	18.3.6 Foaming	481
18.4	Other Properties	482
	Suggested Literature	483
19.	Butter	485
19.1	Description and Manufacture	485
	19.1.1 Description	485
	19.1.2 Manufacturing Scheme	486
	19.1.3 The Churning Process	490
	19.1.4 Working	493
19.2	Structure and Properties	498
	19.2.1 Microstructure	498
	19.2.2 Consistency	500
	19.2.3 Cold Storage Defects	504
19.3	Cultured Butter from Sweet Cream	506
19.4	High-Fat Products	508
	19.4.1 Anhydrous Milk Fat	509
	19.4.2 Modification of Milk Fat	510
	19.4.3 Recombined Butter	512
	19.4.4 Butter Products with a Low Fat Content	514
	Suggested Literature	515
20.	Fermented Milks	517
20.1	General Aspects	517
	20.1.1 Preservation	517
	20.1.2 Nutritive Value	518
20.2	Various Types	521
	20.2.1 Type of Fermentation	522
	20.2.2 Fat Content	523
	20.2.3 Concentration of the Milk	524
	20.2.4 Withdrawal of Whey	524
	20.2.5 Milk of Various Animal Species	524
20.3	Yogurt	526
	20.3.1 The Yogurt Bacteria	526
	20.3.2 Manufacture; Set and Stirred Yogurt	530
	20.3.3 Physical Properties	533
	20.3.4 Flavor Defects and Shelf Life	537
	Suggested Literature	537
PART IV: CHEESE		539
21.	Principles of Cheese Making	541

21.1	Introduction	542
21.2	Essential Process Steps	543
21.3	Clotting and Syneresis	544
	21.3.1 Chymosin	545
	21.3.2 The Enzyme-Catalyzed Reaction	545
	21.3.3 The Flocculation	547
	21.3.4 The Renneting Time	548
	21.3.5 Clotting of Heated Milk	549
	21.3.6 Gel Formation and Syneresis	550
21.4	Chemical Changes	551
	Suggested Literature	553
22.	Process Steps	555
22.1	Pretreatment of Milk	555
	22.1.1 Raw Milk	555
	22.1.2 Milk Treatment	556
22.2	Curd Making	558
	22.2.1 Concentrating the Protein	558
	22.2.2 Curd Treatment in the Vat	566
22.3	Shaping and Pressing	577
22.4	Salting	579
	22.4.1 Mass Transport During Salting	580
	22.4.2 Important Variables	586
	22.4.3 Distribution of Salt and Water After Salting	587
	22.4.4 Diffusion Rate of Other Components	588
22.5	Storage and Handling	588
	22.5.1 Temperature	589
	22.5.2 Air Humidity and Air Velocity	590
	22.5.3 Rind Treatment	591
	22.5.4 Packing	593
22.6	Standardization and Yield	594
	22.6.1 Standardization	594
	22.6.2 Yield	596
	Suggested Literature	600
23.	Cheese Ripening and Properties	601
23.1	Lactic Fermentation	601
23.2	Enzyme Sources	603
23.3	Proteolysis	604
	23.3.1 Methods of Characterization	605
	23.3.2 Milk Proteinases	605
	23.3.3 Rennet Enzymes	606
	23.3.4 Enzymes of Lactic Acid Bacteria	608

23.3.5	Enzymes of Nonstarter Organisms	611
23.3.6	Interaction Between Enzyme Systems	612
23.4	Lipolysis	615
23.5	Development of Flavor	616
23.5.1	Description	616
23.5.2	Changes During Maturation	617
23.6	Development of Texture	620
23.6.1	Structure	620
23.6.2	Consistency	622
23.7	Accelerated Ripening	630
23.7.1	Increase of Ripening Temperature	632
23.7.2	Use of Enzyme Preparations	632
23.7.3	Increase of the Number of Lactic Acid Bacteria	633
23.7.4	Increasing the Rate of Lysis of Starter Cells	633
23.7.5	Addition of Other Bacteria	633
23.8	Nutritive Value and Safety	634
	Suggested Literature	636
24.	Microbial Defects	639
24.1	Coliform Bacteria	640
24.2	Butyric Acid Bacteria	642
24.3	Lactobacilli	646
24.3.1	Common Lactobacilli	646
24.3.2	Salt-Tolerant Lactobacilli	646
24.4	Heat-Resistant Streptococci	647
24.5	Propionic Acid Bacteria	647
24.6	Organisms on the Rind	648
24.7	Some Other Microbial Defects	648
24.8	Establishing Types of Microbial Defects with Gas Production	649
	Suggested Literature	649
25.	Cheese Varieties	651
25.1	Overview	651
25.1.1	Variations in Manufacture	652
25.1.2	Types of Cheese	659
25.2	Fresh Cheese	663
25.2.1	Quarg	663
25.2.2	Cottage Cheese	666
25.3	Gouda-Type Cheeses	668
25.3.1	Manufacture	669
25.3.2	Properties and Defects	676
25.4	Swiss and Pasta Filata Types	679

Contents

xv

25.4.1	Emmentaler	681
25.4.2	Mozzarella	684
	Cheddar-Type Cheeses	687
25.5.1	Manufacture	687
25.5.2	Properties	691
25.6	Cheeses with a Specific Flora	693
25.6.1	Soft Cheese with a Surface Flora	693
25.6.2	Blue-Veined Cheese	703
	Processed Cheese	706
	Suggested Literature	708
