

CONTENTS

| | | |
|----|---|-----|
| 1 | Aggregation Mechanisms in Food Colloids and the Role of Biopolymers | 1 |
| 2 | Conformation and Physical Properties of the Bacterial Polysaccharides Gellan, Welan, and Rhamsan | 22 |
| 3 | Developments in Polyelectrolyte Adsorption: Theory and Experiment | 34 |
| 4 | Probe Studies of the Gelation of Gelatin using the Forced Rayleigh Scattering Technique | 47 |
| 5 | Interactions Between Small Amphipathic Molecules and Proteins | 65 |
| 6 | Surface Adsorption Studies of Amino-acids and Proteins at a Platinum Electrode | 81 |
| 7 | Preliminary Studies of B-Lactoglobulin Adsorbed on Polystyrene latex | 96 |
| 8 | Dimensions and Possible Structures of Milk Proteins at Oil-Water Interfaces | 113 |
| 9 | Phase Diagrams of Mixed Soybean Phospholipids | 123 |
| 10 | Stability of Food Emulsions Containing Both Protein and Polysaccharide | 132 |
| 11 | Function of Tending Emulsifiers and Proteins in Whippable Emulsions | 147 |
| 12 | Importance of peptides for Food Emulsion Stability | 159 |
| 13 | Monitoring Crystallization in Simple and Mixed Oil-in-Water Emulsions using Ultrasonic Velocity Measurement | 171 |
| 14 | Reactivity of Food Preservatives in Dispersed Systems | 180 |
| 15 | Biochemical and Physical Analysis of Beers – Roles for Macromolecular Species in Foam Stabilization at Dispense | 194 |
| 16 | On Static Drainage of Protein-Stabilized Foams | 207 |
| 17 | Factors affecting the Formation-Stabilized Foams | 227 |
| 18 | Behaviour of Low-Calorie Spreads Based on Protein Stabilized Oil-in-Water Systems | 232 |

| | |
|--|-----|
| 19 Creaming in Flocculated Oil-in –Water Emulsions | 224 |
| 20 Computer Simulations of the Flow of Deformable Particles | 262 |
| 21 Molecular Diffusion at Interfaces and Relationship to Disperse Phase Stability | 272 |
| 22 Melting and Glass/Rubber Transitions of Starch | 277 |
| 23 Calorimetric Study of the Glass Transition occurring in Sucrose Solutions | 289 |
| 24 Small-angle X-Ray Scattering and Differential Scanning Calorimetry from Starch and Retrograded Starch | 301 |
| 25 Weak and Strong Polysaccharide Gels | 310 |
| 26 Structural and Mechanical Properties of Biopolymer Gels | 322 |
| 27 Mixed Gels Formed with Konjac Mannan and Xanthan Gum | 339 |
| 28 Flow and Viscoelastic Properties of Mixed Xanthan + Galactomannan systems | 349 |
| 29 Concentration Dependence of Gelation Time | 357 |
| 30 On the Fractal Nature of Particle Gels | 369 |
| 31 Mechanical Properties and Structure of Model Composite Foods | 383 |
| 32 Fracture and Yielding of Gels | 392 |
| 33 Light Scattering Studies of Milk Gel Systems | 404 |
| 34 Relationships between Sensory Perception of Texture and the Psychophysical Properties of Processed Cheese | 415 |
| 35 Discussions | 432 |
| 36 Food Chemistry Group Senior Medal Lecture | 450 |
| 37 Steric Interactions between Microemulsion Droplets in a Plastic-Crystalline Phase | 469 |
| 38 Foaming Properties of Well Defined Protein Systems | 477 |

| | |
|--|-----|
| 39 Interaction between Polystyrene Latices and Catalase: Primarily Ionic or Hydrophobic? | 482 |
| 40 Competitive Adsorption of B-Lactoglobulin in Mixed Protein Emulsions | 485 |
| 41 Effect of Molecular Weight on the Emulsifying Behaviour of Gum Arabic | 490 |
| 42 Bridging Flocculation in Emulsions Made with a Mixed of Protein Polysaccharide | 494 |
| 43 Emulsifying and Surface Properties of the 11S and 7S | 498 |
| 44 Effect of Ethanol on the Foaming of Food Macromolecules | 503 |
| 45 Gelation in a Synthetic Polypeptide System | 508 |
| 46 Electrokinetic Properties of Gels | 513 |
| 47 New Improved Method for Measuring the Surface Dilational Modulus of a Liquid | 519 |
| 48 Application of Fractal Aggregation Theory to the Heat Coagulation of Milk Products | 523 |
| 49 Sedimentation in Aqueous Xanthan + Galactomannan Mixtures | 527 |
| 50 Molecular Motion Carbohydrate + Water Mixtures in the Liquid and Glassy States as Studied by Spin-probe ESR | 531 |
| 51 Mechanical Properties of Wheat Starch Plasticized with Glucose and Water | 537 |
| 52 Structure of Microemulsion-based Organo-Gels | 542 |
| 53 Factors affecting the Formation and Stabilization of Gas Cells in Bread Doughs | 546 |
| 54 Galactomannans as Emulsifiers | 549 |
| 55 Computer Simulation of Macromolecular Adsorption | 557 |
| 56 Models of Protein Adsorption at Gas-Liquid Interfaces | 564 |
| 57 Interactions between Whey Proteins and Lipids in Emulsions | 571 |
