

CONTENTS

Introduction: Molecules, the Unseen Actors	1
PART ONE	
THE ENERGY NUTRIENTS: CARBOHYDRATE, FAT, PROTEIN	10
1 The Carbohydrates	13
Highlight One: Sugar: Is It Bad for You?	39
2 The Lipids	53
Highlight Two: Cholesterol and Atherosclerosis	72
3 Proteins; (A) Structure and Need	83
Highlight Three: Meat Eaters vs Vegetarians	102
4 Proteins: (B) Roles and Deficiency	117
Highlight Four: World Protein Calorie Malnutrition	129
5 Digestion	143
Highlight Five: Common GI Tract Problems	162
6 Absorption	175
Highlight Six: Mind and Body	193
7 Metabolism	201
Highlight Seven: An Optional Chapter	
Extracting Energy from Carbohydrate, Fat Protein	216
8 Energy Balance and Weight Control	233
Highlight Eight: Diet Fallacies	254
PART TWO	
VITAMINS, MINERALS, WATER	267
Introduction: Supporting Actors	269
9 The B Vitamins	275
Highlight Nine: Alcohol and the Liver	298
10 Vitamin C: Ascorbic Acid	311
Highlight Ten: Vitamin C and the Common cold:	
The Importance of Controlled Research	324
11 The Fat-Soluble Vitamins; A, D, E, K	337
Highlight Eleven: Vitamin E: A Cure-all?	361
12 The Major minerals	369
Highlight Twelve: Hunger in America	384
13 The Trace Minerals	397
Highlight Thirteen: Consumer Protection Legislation	415

14	Water and Salts	429
	Highlight Fourteen: An Extended Activity: Nutritional Self-Study	442
15	Nutrition Through Life	453
	Afterword	488
Appendixes		
Appendix A		
	History of Discoveries in Biochemistry and Nutrition	491
Appendix B		
	Summary of Basic Chemistry Concepts	495
Appendix C		
	Biochemical Structures	507
Appendix D		
	Aids to Calculation	521
Appendix E		
	Measures of Protein Quality	533
Appendix F		
	“Ideal” Weights	535
Appendix G		
	Cholesterol Content of Foods	537
Appendix H		
	Table of Food Composition	539
Appendix I		
	Recommended Daily Dietary Allowances	575
	Index	577
