1. Sugar	1
1.1 Introduction	1
1.2 Production of Cane sugar	1
1.3 Production of beet sugar	2
1.4 Types of sugar	3
1.5 Composition of sugars	5
1.6 Bulk storage of sugar products	7
1.7 Properties of sugar and sugar solutions	9
1.8 Conclusion	12
Bibliography	12
2. Glucose syrups and starch hydrolysates	13
2.1 Introduction	13
2.2 Enzymes in glucose syrup production	14
2.3 Refined glucose syrups	19
2.4 Glucose syrups in sugar confectionery manufacture	22
References	36
Further reading	37
3. Gums and gelling agents	38
3.1 Background	38
3.2 Uses	38
3.3 Categories of ingredient	39
3.4 Replacing one ingredient with another	39
3.5 Aerated products	40
3.6 Molecular weights and their effects	40
3.7 Texture	41
3.8 Measuring gel strengths and standardising ingredients	41
3.9 Confectionery product names	41
3.10 Future developments	42
3.11 Food legislation	42
3.12 Individual ingredients	42
3.13 Health and safety	61
4. Oils and Fats : milk and milk products	62
4.1 Oils and fats : introduction	62
4.2 The chemistry of oils and fats	62
4.3 The production of oils and fats	68
4.4 Modification	72
4.5 Selection of fats for confectionery uses	77
4.6 Milk and relateds : introduction	78
4.7 The composition of milk and functional properties of its major components	79
4.8 The application of milk-based ingredients	84
4.9 Concluding comments	90
References	90
5. Colour and flavour	91
5.1 Introduction	91
5.2 Some factors influencing choice	92
5.3 Colours for the sugar confectioner	93
5.4 Natural colours	95
5.5 Synthetic colours	97
5.6 What are flavorings?	98

5.7	Natural, nature-identical or artificial? Advantages and disadvantages	98
5.8	Flavour strength : dosage levels	99
5.9	Functions of carrier solvents and powders	100
5.10	Factors affecting stability of flavouring compounds	101
5.11	Packaging, storage, handling and dispensing	102
5.12	Handling of flavouring components : safety precautions	103
5.13	Legislation and labelling	103
5.14	Concluding comments	104
	Further reading	105
