Preface	xiii
Part one     INTRODUCTION TO ENGINEERING ECONOMY	1
1.    Engineering and Engineering Economy	2
1.1   Engineering and Science	1
1.2   The Bi-Environmental Nature of Engineering	4
1.3   Physical and Economic Efficiency	6
1.4   The Engineering Process	7
1.5   A Plan for Engineering Economy Studies	11
1.6   Engineering Economy and the Engineering Questions	15 16
2.    Some Fundamental Economic Concepts	18
2.1   Economics Deals with the Behavior of People	18
2.2   Concepts of Value and Utility	20
2.3   Consumer and Producer Goods	21
2.4   Economic Aspects of Exchange	23
2.5   The Economy of Organization	26
2.6   Classifications of Cost	28
2.7   Price Is Determined by Supply and Demand	33
2.8   The Law of Diminishing Returns	34
2.9   Considering Advantages and Disadvantages Questions and Problems	36 37
3.    Elementary Examples of Economy Studies	40
3.1   Design and Economy	40
3.2   Economy of Material Selection	45
3.3   Standardization and Simplification	47
3.4   The Selection of Personnel	48
3.5   Economy of resource Input	52
3.6   Considering Qualitative and Quantitative Knowledge	54
3.7   The Appropriate Combination of Elements Problems	55 56
Part two     INTEREST FORMULAS AND EQUIVALENCE	61
4.    Interest and Interest Formulas	62
4.1   Interest Rate, The Rate of Capital Growth	62
4.2   The Earning Power of Money	65
4.3   The Time Value of Money	66
4.4   Types of Interest	67
4.5   The Description of an Investment Opportunity	69
4.6   Interest Formulas (Annual Compounding, Annual Payments)	70
4.7   Nominal and Effective Interest Rates	83
4.8   Interest Formulas (Continuous Compounding, Discrete Payments)	86
4.9   Interest Formulas (Continuous compounding, Continuous Payments)	89
4.10  Summary of Interest Formulas Problems	92 94
5.    Calculations of Equivalence Involving Interest	100
5.1   The Meaning of Equivalence	100

5.2	Equivalence Calculations Requiring a Single Factor	104
5.3	Equivalence Calculations for More Frequent Compounding	113
5.4	Equivalence Calculations Requiring Several Factors	117
5.5	Bonds and Interest Calculations	121
5.6	Inflation and Interest Problems	123 125
Part three ECONOMIC ANALYSIS OF ALTERNATIVES		133
6.	Bases for Comparison of Alternatives	134
6.1	Net Cash Flows for Investment Opportunities	135
6.2	Present-Worth Amount	136
6.3	Annual Equivalent Amount	140
6.4	Future-Worth Amount	144
6.5	Rate of Return	146
6.6	Payout Period	154
6.7	Prospective Value Problems	155 158
7.	Decision Making Among Alternatives	164
7.1	Types of Investment Proposals	164
7.2	Mutually Exclusive Alternatives and Decision Making	168
7.3	Decision Criteria for Mutually Exclusive Alternatives	174
7.4	Applying Decision Criteria When Money Is Limited	187
7.5	Other Decision Criteria	191
7.6	Comparison of Alternatives with Unequal Service Lives Problems	194 198
8.	Evaluating Replacement Alternatives	210
8.1	The General Nature of Replacement Analysis	211
8.2	Evaluation of Replacements Involving Sunk Costs	214
8.3	Replacement Analysis for Unequal Lives	220
8.4	The Economic Life of an Asset	224
8.5	Replacement Analysis Based on Economic Life	231
8.6	Examples of Replacement Analyses Problems	234 241
9.	Break-Even and Minimum Cost Analysis	250
9.1	Break-Even Analysis, Two Alternatives	250
9.2	Break-Even Analysis, Multiple Alternatives	255
9.3	Minimum Cost Analysis	257
9.4	Minimum Cost Analysis, Multiple Alternatives Problems	260 263
10.	The Evaluation of Public Activities	270
10.1	General Welfare Aim of Government	270
10.2	The Nature of Public Activities	273
10.3	Financing Public Activities	275
10.4	Public Activities and Engineering Economy	278
10.5	Benefits-Cost Analysis	279
10.6	Identifying Benefits, Disbenefits, and Cost	289
10.7	Cost-Effectiveness Analysis Questions and Problems	292 296
Part four ACCOUNTING, DEPRECIATION, AND INCOME TAXES		305
11.	Accounting and Cost Accounting	306
11.1	General Accounting	306
11.2	Cost Accounting	311
11.3	Methods for Allocating Overhead Charges	314

11.4	Use of Accounting Data in Economy Studies	321
	Questions and Problems	323
12.	Depreciation and Depreciation Accounting	326
	12.1 Classification of Depreciation	326
	12.2 Accounting for the Consumptions of Capital Assets	329
	12.3 The Value-Time Function	330
	12.4 Straight-Line Method of Depreciation	331
	12.5 Declining-Balance Method of Depreciation	333
	12.6 Sum-of-the-Years-Digits Method of Depreciation	335
	12.7 Sinking-Fund Method of Depreciation	337
	12.8 Service Output Method of Depreciation	339
	12.9 Depletion	340
	12.10 Capital Recovery with Return Is Equivalent for All Methods of Depreciation	342
	12.11 Depreciation and Engineering Economy Studies	344
	Questions and Problems	346
13.	Income Taxes in Economic Analysis	350
	13.1 Relation of Income Taxes to Profit	350
	13.2 Individual Federal Income Tax	352
	13.3 Corporation Federal Income Tax	356
	13.4 Depreciation and Income Taxes	361
	13.5 Depletion and Income Taxes	366
	13.6 Economy Calculations Involving Income Taxes	368
	Problems	373
Part five	ESTIMATES, RISK, AND UNCERTAINTY	381
14.	Estimating Economic Elements	382
	14.1 The Elements To Be Estimated	382
	14.2 Cost Estimating Methods	387
	14.3 Adjustment of Cost Data	391
	14.4 Cost Estimating Relationships	400
	14.5 Service Life Estimation	404
	14.6 Judgment in Estimating	407
	Questions and Problems	408
15.	Estimates and Decision Making	410
	15.1 An Example Decision Based Upon Estimates	410
	15.2 Allowances for Errors in Estimates	413
	15.3 Considering a Range of Estimates	414
	15.4 Sensitivity Analysis	417
	Question and Problems	422
16.	Decision Making Involving Risk	424
	16.1 Basic Probability Theory	424
	16.2 Expected Value Decision Making	430
	16.3 Expectation-Variance in Decision Making	434
	16.4 Decision Trees in Decision Making	436
	16.5 Monte Carlo Methods	446
	Problems	451
17.	Decision Making Under Uncertainty	462
	17.1 The Payoff Matrix	462
	17.2 The Laplace Rule	465
	17.3 Maximin and Maximax Rules	466
	17.4 The Hurwicz Rule	467
	17.5 The Minimax Regret Rule	469
	17.6 Summary of Decision Rules	470
	Problems	471

Part six	ECONOMIC ANALYSIS OF OPERATIONS	475
18.	Analysis of Construction and Production Operations	476
18.1	Critical Path Methods	476
18.2	Economic Aspects of Location	484
18.3	Economic Operation of Equipment	486
18.4	Producing to a Variable Demand	491
18.5	Equipment Selection for Expanding Operations Problems	494 495
19.	Mathematical and Graphical Models for Operations	502
19.1	Linear Break-Even Models	502
19.2	Nonlinear Break-Even Analysis	507
19.3	Linear Programming Models	515
19.4	Models for Inventory Operations	517
19.5	Analysis of Waiting Line Operations Problems	524 529
	APPENDICES	535
A.	Interest Factors for Annual Compounding Interest	536
B.	Effective Interest Rates Corresponding to Nominal Rate $r$	558
C.	Interest Factors for Continuous Compounding Interest	560
D.	Funds Flow Conversion Factors	576
	Index	581
