Preface		ix
Section I	Fundamentals of Engineering Economics	1
	Engineering Economics for Chemical Engineers	3
	Economic Analysis	116
	Finance for Engineers	205
Section II	Techniques for Economic Analysis & Evaluations	211
	Profitability, Sensitivity and Risk Analysis for Project Economics	213
	Risk Analysis	220
	Simplifying Scaleup Cost Estimation	224
	Plant Cost vs. Capacity : New Way to Use Exponents	225
	How to Use Mixed-Integer Programming	231
	Breakeven Analysis	238
	Pitfalls in Evaluating R&D	240
	Analyzing Potential Research Projects	242
	Analyzing R&D Investments Via Dynamic Modeling	248
	Forecasting for Sales and Production	257
	Revised Technique for Predesign Cost Estimating	264
	Technological Forecasting for the Chemical Process Industries	274
	Correcting Economic Analyses	283
	The Human Equation in Economic Evaluations	287
	A “Business” Approach to Capital-Budgeting Decisions	290
Section III	Costs of Process Equipment and Other Items	297
	CE Cost Indexes Maintain 13-Year Ascent	299
	Cost Estimating for Major Process Equipment	301
	Economic Pipe Insulation for Cold Systems	318
	Installed Cost of a Distillation Column	327
	Cost Estimation for Turbine Agitators	332
	Nomograph Updates Process Equipment Costs	336
	Thick-Wall Pressure Vessels	339
	Costs of Process Instruments	343
	Costs of Viscosity, Weight, Analytical Instruments	360
	Control-Panel Costs	365
	Safety Instruments and Control-Valve Costs	369
	Estimating the Costs of Gas-Cleaning Plants	376
	Cost of Standard-Sized Reactors and Storage Tanks	387
	Capital and Operating Costs for 54 Chemical Processes	289
	How Much Working Capital Will the New Project Need?	406
Section IV	Cost Engineering and Plant Construction	411
	Construction Contracts	413
	Economics of Plant Startups	418
	The Proposal Manager’s Work	421
	Overtime-Pay Problems	426
	Contracting for New Construction	430
	Building-Cost Escalation	433
	Cost of Preparing Proposals	437

Section V	Choosing the Right Economic Alternative	439
	How to Make the Correct Economic Decision on Spare Equipment	441
	Economic Evaluation of Future Equipment Needs	446
	Saving Energy and Costs in Pumping Systems	449
	The Cost of Missing Pipe Insulation	453
	Economic Penalties of Operating a Process at Reduced Capacity	455
	Selecting a Vacuum Producer	459
	Designing for Usable Capacity, Usable Quality	463
	Shall We Buy that New Equipment?	467
	Cost Comparisons of Analog-Control and Computer-Control Systems	469
	New Method Gives Quick, Accurate Estimate of Distillation Costs	472
	Equipment Buying Decisions	478
	Relative Metal Economy of Pressure-Vessel Steels	482
	Operating vs. Capital Costs : Evaluating Tradeoff Benefits	484
Section VI	Operating Costs and Related Topics	491
	Meaningful Production Costs	493
	Cost-Improvement Techniques	498
	How to Estimate Operating Costs and Depreciation	509
	Developing and Evaluating a Manufacturing-Cost Estimate	513
	Before You Buy, What About maintenance Costs?	516
	Earned Value : Tool for Measuring R&D	518
	Value Engineering – A Money-Saving Tool	520
	Estimating Marketing Costs	523
	Estimating Mill Costs at Low Production Rates	526
	Thermodynamics Helps You Predict Selling Price	529
	Stretch Distribution Dollars	532
	Predicting Chemical Prices	538
Section VII	Topical Cost Engineering ...Inflation...Energy Conservation...Environmental Control	543
	Machinery Costs vs. Energy Conservation	545
	How to Estimate and Escalate Costs of Wastewater Equipment	548
	Economics of Process Heat from Solar Energy	555
	Putting Inflation into Profitability Studies	559
	How to Assess Inflation of Plant Costs	564
	Effects of Inflation and Escalation on Plant Costs	572
	Cost Escalation : Its Impact on Purchased Equipment	575
	A Method for Forecasting the CE Plant Cost Index	577
