Part I	
SUMMARY	1
1 INTRODUCTION	3
1.1 Purpose	3
1.2 Models	3
1.3 Limitations	7
1.4 Design of the book	12
2. TERMINOLOGY AND MODELS	13
2.1 Innovation	13
2.2 Creativity	16
2.3 Diffusion	17
3. GENERATION OF IDEAS	21
3.1 Models	21
3.2 Methods	25
4. UTILISATION OF IDEAS	30
4.1 Model	31
4.2 Methods	33
5. PREPARATION FOR IMPLEMENTATION	40
5.1 Model	40
5.2 Methods	41
6. MANUFACTURING AND MARKETING	44
6.1 Model	45
6.2 Methods	46
Part II	
1. INTELLIGENCE – NEED RELATED	53
1.1 Need Confrontation	53
1.2 User observation	54
1.3 User contacts	55
1.4 Surveillance of competitors	57
1.5 Surveillance of government regulations	58
1.6 Surveillance of market sectors	59
2. INTELLIGENCE – TECHNOLOGY RELATED	61
2.1 Surveillance of technology	61
2.2 Development of technological competence	62
2.3 Surveillance of resources	63
2.4 Industrial espionage	64
3. FORECASTING	67
3.1 Scenario technique	67
3.2 Delphi technique	69
3.3 Trend extrapolation technique	70
3.4 Relevance-tree technique	72
3.5 System dynamics	73
3.6 Structural models	75
3.7 Cross-impact analysis	77

4.	DEVELOPMENT OF CREATIVITY	79
4.1	Creativity tests	79
4.2	Climate measurements	80
4.3	Morphological technique	82
4.4	Brainstorming	83
4.5	Forced relationship technique	85
4.6	Synectics	86
4.7	Eclectic approach for creative thinking	87
4.8	Work simplification	89
4.9	Suggestion system	89
5.	PRELIMINARY STUDY	90
5.1	Feasibility study	90
5.2	Technology assessment	91
5.3	Patent search	93
5.4	Ecological analysis	94
5.5	Resource analysis	96
5.6	Legal analysis	97
6.	PROJECT FORMULATION	99
6.1	Project Selection technique	99
6.2	Develop/buy analysis	100
6.3	Acquisition of licences	102
6.4	Legal protection	103
7.	PREMININARY ANALYSIS	105
7.1	Quality level planning	105
7.2	Scheduling – network models	106
7.3	Scheduling – gantt charts	107
8.	MARKET RESEARCH	108
8.1	Use of internal market statistics	108
8.2	Use of external market statistics	109
8.3	Current market studies	111
8.4	Special market studies	112
9.	COST ESTIMATES	114
9.1	Risk analysis	114
9.2	Project cost	116
9.3	Product cost	116
9.4	Investment cost and profitability	116
10.	DESIGN	117
10.1	Applied research	117
10.2	Styling (shape and colour)	118
10.3	Catalogue aided design	120
10.4	Alternative design approaches	121
10.5	Computer aided design	122
10.6	Design and testing of models	123
10.7	Standardisation	125
10.8	Design for demanufacturing	126
11.	DESIGN EVALUATION	128
11.1	Value analysis	128
11.2	Reliability analysis	129
11.3	Ergonomic analysis	130
11.4	Useful life analysis	132
11.5	Maintenance analysis	133
11.6	Fault analysis by brainstorming	134
11.7	Fault analysis by logical methods	135

11.8	Design review	136
12.	DESIGN CALCULATION	138
12.1	Stress Calculation	138
12.2	Mechanical vibration calculation	138
12.3	Flow calculation	138
12.4	Thermal calculation	139
12.5	Cybernetic calculation	139
13.	QUALITY VERIFICATION	140
13.1	Laboratory testing	140
13.2	User testing	141
14.	MANUFACTURING PREPARATION	143
14.1	Make / buy analysis	143
14.2	Equipment and tooling	143
14.3	Process and operation planning	143
14.4	Material planning	144
14.5	Quality control planning	144
14.6	Design for manufacturing	144
15.	MARKETING PREPARATION	145
15.1	Distribution	145
15.2	Sale of licences	147
15.3	Advertising	148
15.4	Sales promotion	148
15.5	Sales planning	148
15.6	Trade marks	149
16.	TEST MARKETING	150
16.1	Use of test area	150
16.2	Use of trade fairs	151
17.	INTRODUCTION	154
17.1	Selection of strategy for introduction	154
17.2	Recording of actual sales	155
18.	REGISTRATION OF MANUFACTURING AND MARKETING DATA	156
18.1	Registration of quality parameters	156
18.2	Quantity	157
18.3	Sales	157
18.4	Costs	157
19.	METHODS FOR EVALUATION OF PRODUCTS AND PROCESSES	158
19.1	Field reports	158
19.2	Project evaluation	159
20.	ELIMINATION ANALYSIS	161
20.1	Product – market matrix	161
20.2	Life cycle analysis	162
20.3	Sales trends	163
20.4	Profit data	165
