Part One	Introduction	1
1.	Production & Operations Management, Past & Present	3
2.	Decision Making & the Production Function	19
3.	The Systems Concept	45
Part Two	Analytical Methods	65
4.	Analytical Methods in Production & Operations Management	67
5.	Cost Data for Decisions	109
6.	Capital Costs & Investment Criteria	127
7.	Linear Programming	147
8.	Waiting Lines	193
Part Three	Design of Productive Systems	213
9.	Production Design & Processes	215
10.	Process Planning	251
11.	Plant Location	283
12.	Layout of Physical Facilities	309
13.	Job Design & Man-Machine Systems	365
14.	Production Standard & Work Measurement	417
Part Four	Operations Planning & Control	451
15.	Production-Inventory Systems	453
16.	Forecasting & Inventories	473
17.	Aggregate Plans & Programs	507
18.	Scheduling & Control for High-Volume Systems	547
19.	Scheduling & Control for Intermittent Systems	571
20.	Planning, Scheduling, & Control for Large-Scale Projects	593
21.	Maintenance	621
22.	Control of Quality	643
Part Five	Synthesis	671
23.	Production & Operations Management – Summary	673
Part Six	Appendix – Tables	687
I	PV _{sp} , Present Value Factors for Future Single Payments	689
II	PV _a , Present Value Factors for Annuities	690
III	Factors Useful in the Construction of Control Charts	691
IV	Table of Random Digits	692
Index		693
