

Table of Contents

- 1 Introduction1
 - 1.1 Purpose1
 - 1.2 Scope1
 - 1.3 Who Will Benefit from this Guideline?2
- 2 Management3
 - 2.1 Management Overview3
 - 2.2 Why Do We Use Gas Detectors?4
 - 2.3 What Do We Want to Detect?5
 - 2.4 What Actions Do We Expect to Undertake in the Event of a Release?6
 - 2.5 How Much Should We Spend on Detection?7
- 3 Determining Where Gas Detection May or May Not be Beneficial9
 - 3.1 Assessing Where Gas Detection may be Beneficial9
 - 3.2 Situations Where Other Technologies May be More Beneficial11
 - 3.3 Situations Where Gas Detection Is Recommended by Consensus or Mandated By Law13
 - 3.4 Situations Where Toxic Gas Detection May be Beneficial17
 - 3.5 Situations Where Combustible Detection May be Beneficial18
 - 3.6 Example Applications of the Continuous Monitoring System20
 - 3.6.1 Generalized Applications20
 - 3.6.2 Personal Direct Reading Monitors in the Refining Environment22
 - 3.6.3 Perimeter Monitoring at an LPG Storage Facility23
 - 3.6.4 Exhausted Enclosures; Specific Example in the Semiconductor Industry, Specialty Gas Guideline24
 - 3.6.5 Example: Hazardous Gas Monitoring: Alarm Set points and Response Protocols26
 - 3.6.6 Hazardous Gas Monitoring: System Features27
 - 3.6.7 Hazardous Gas Monitoring: Sample Points28
 - 3.7 References29
 - 3.8 Glossary29
- 4. Sensor Technology31
 - 4.1 Introduction31
 - 4.2 Description of Gases and Vapors31
 - 4.2.1 Gas31
 - 4.2.2 Vapor31
 - 4.3 Available Sensors and How they Work32
 - 4.3.1 Electrochemical Sensors32

4.3.2 Infrared (IR) Sensors.....	32
4.3.3 Catalytic Bead Sensors.....	33
4.3.4 Photoionization Detector (PID)	33
4.3.5 Thermal Conductivity (TC) Gas Detectors	34
4.3.6 Colorimetry (i.e., Honeywell Zellwegger Chemcassette®).....	34
4.3.7 Radon Gas	34
4.3.8 Laser Gas Analyzer Open Path Detection	34
4.4 Factors to Consider when Choosing a Sensor.....	35
4.4.1 Target Gas/Vapor.....	35
4.4.2 Interfering Gases/Vapors.....	35
4.4.3 Expected Gas/Vapor Concentration Range	35
4.4.4 Fixed vs. Portable Detectors	36
4.4.5 Personal Detection Equipment.....	37
4.4.6 Point or Open Path Detection.....	37
4.5 Sensor Performance Variables.....	38
4.5.1 Response Speed.....	38
4.5.2 Measurement Range/Operating Range	39
4.5.3 Sensitivity.....	39
4.5.4 Oxygen Requirements.....	39
4.5.5 Interference	39
4.6 References	43
4.7 Glossary	44
5 Approaches to Detector Placement and Configuration	45
5.1 General Guidance for Detector Placement and Configuration	45
5.2 General Guidance for Toxic Gas Detection	47
5.3 General Guidance for Flammable Detection	50
5.4 Detector Placement for Source Monitoring	51
5.5 Detector Placement for Volumetric Monitoring	53
5.5.1 Applying the Volumetric Approach in Enclosed Buildings	56
5.5.2 Applying the Volumetric Approach in Outdoor Locations and Semi-Enclosed Volumes	57
5.5.2.1 Semi-Enclosed Volumes	58
5.5.2.2 Open Volumes	59
5.5.2.3 Applying the Volumetric Approach to Liquid Phase and Heavier-Than-Air Releases	60
5.6 Detector Placement for Enclosure Monitoring	60
5.6.1 Monitoring Enclosures for Toxics	60
5.6.2 Monitoring Enclosures for Flammables	63
5.6.2.1 Enclosures Containing Release Sources	63
5.6.3 Enclosures Exposed to External Release Sources Only	66
5.7 Detector Placement for Path of Travel and Target Receptor Monitoring	68

5.8	Detector Placement for Perimeter Monitoring	69
5.9	Detector Set Points and Monitoring	71
6	Overall System Management — Commissioning, Testing, and Maintenance	73
6.1	Summary	73
6.2	Training	73
6.3	Documentation	74
6.4	Maintenance	74
6.5	Establish a Good Relationship with the Local Authority-Having Jurisdiction (AHJ)	75
6.6	Change Management	75
