Part One PRODUCT AND PROCESS INVENTION— HEURISTICS AND ANALYSIS

1. The Design Process 3

- 1.0 Objectives 3
- 1.1 Design Opportunities 3
 - Design Team 5
- 1.2 Steps in Product and Process Design 5
 - Create and Assess Primitive Problem 8
 - Find Chemicals or Chemical Mixtures Having Desired Properties and Performance 15
 - Process Creation 16
 - Development of Base Case Process 16
 - Detailed Process Synthesis Using Algorithmic Methods 18
 - Plantwide Controllability Assessment 18
 - Detailed Design, Equipment Sizing, and Optimization—Configured Product Design 19
 - Written Design Report and Oral Presentation 20
 - Plant Design, Construction, Startup, and Operation 20
 - Summary 21
- 1.3 Environmental Protection 21
 - Environmental Issues 21
 - Environmental Factors in Process Design 23
 - Environmental Design Problems 26
- 1.4 Safety Considerations 27
 - Safety Issues 28
 - Design Approaches Toward Safe Chemical Plants 30
- 1.5 Engineering Ethics 31
- 1.6 Role of Computers 37
 - Spreadsheets 39
 - Mathematical Packages 39
 - Process Simulators 39
 - Computational Guidelines 40
- 1.7 Summary 40
- References 41

2. Molecular Structure Design 42

- 2.0 Objectives 42

- 2.1 Introduction 43
 - Pharmaceutical Product Design 44
- 2.2 Property Estimation Methods 45
 - Computer Data Banks 45
 - Property Estimation 46
 - Polymer Property Estimation 47
 - Microsimulation 48
- 2.3 Optimization to Locate Molecular Structure 49
 - Polymer Design 50
 - Refrigerant Design 52
 - Solvent Design 56
 - Solutes for Hand Warmers 60
- 2.4 Summary 60
- References 60 Exercises 61

3. Process Creation 62

- 3.0 Objectives 62
- 3.1 Introduction 62
- 3.2 Preliminary Database Creation 62
 - Thermophysical Property Data 63
 - Environmental and Safety Data 67
 - Chemical Prices 67
 - Summary 68
- 3.3 Experiments 68
- 3.4 Preliminary Process Synthesis 68
 - Chemical State 69
 - Process Operations 70
 - Synthesis Steps 72
 - Continuous or Batch Processing 73
 - Example of Process Synthesis: Manufacture of Vinyl Chloride 73
 - Synthesis Tree 84
 - Heuristics 85
 - Example of Process Synthesis: Manufacture of Tissue Plasminogen Activator (tPA) 85
 - Synthesis Tree 95
 - Algorithmic Methods 96
- 3.5 Development of the Base-Case Design 96
 - Flow Diagrams 96
 - Process Integration 102
 - Detailed Database 102
 - Pilot-Plant Testing 103
 - Process Simulation 104
- 3.6 Summary 104
- References 104 Exercises 105

4. Simulation to Assist in Process Creation 106

- 4.0 Objectives 106
- 4.1 Introduction 107
- 4.2 Principles of Steady-State Flowsheet Simulation 108
 - Process and Simulation Flowsheets 108
 - Unit Subroutines 119
 - Calculation Order 123
 - Recycle 125
 - Recycle Convergence Methods 133
 - Flash with Recycle Problem 135
 - Flash Vessel Control 136
 - Equation-Oriented Architectures 136
- 4.3 Synthesis of the Toluene Hydrodealkylation Process 136
 - Process Simulation 140
- 4.4 Steady-State Simulation of the Monochlorobenzene Separation Process 142
 - Use of Process Simulators 144
- 4.5 Principles of Batch Flowsheet Simulation 145
 - Process and Simulation Flowsheets 145
 - Equipment Models 145
- 4.6 Summary 154
- References 154 Exercises 155

5. Heuristics for Process Synthesis 161

- 5.0 Objectives 161
- 5.1 Introduction 162
- 5.2 Raw Materials and Chemical Reactions 163
- 5.3 Distribution of Chemicals 165
 - Inert Species 166
 - Purge Streams 168
 - Recycle to Extinction 171
 - Selectivity 172
 - Reactive Separations 173
 - Optimal Conversion 175
- 5.4 Separations 175
 - Separations Involving Liquid and Vapor Mixtures 175
 - Separations Involving Solid Particles 177
- 5.5 Heat Removal from and Addition to Reactors 179
 - Heat Removal from Exothermic Reactors 179
 - Heat Addition to Endothermic Reactors 182
- 5.6 Heat Exchangers and Furnaces 183
- 5.7 Pumping, Compression, Pressure Reduction, Vacuum, and Conveying of Solids 185
 - Increasing the Pressure 186
 - Decreasing the Pressure 188
 - Pumping a Liquid or Compressing a Gas 189
 - Vacuum 190
 - Conveying Granular Solids 190
 - Changing the Pressure of Granular Solids 191

- 5.8 Changing the Particle Size of Solids and Size Separation of Particles 191
- 5.9 Removal of Particles from Gases and Liquids 193
- 5.10 Summary 193
- References 198 Exercises 198

Part Two

DETAILED PROCESS SYNTHESIS— ALGORITHMIC METHODS

6. Reactor Design and Reactor Network Synthesis 205

- 6.0 Objectives 205
- 6.1 Reactor Models 205
 - Reaction Stoichiometry 206
 - Extent of Reaction 206
 - Equilibrium 207
 - Kinetics 210
 - Ideal Kinetic Reaction Models—CSTRs and PFRs 211
- 6.2 Reactor Design for Complex Configurations 214
- 6.3 Reactor Network Design Using the Attainable Region 220
 - Construction of the Attainable Region 222
 - The Principle of Reaction Invariants 226
- 6.4 Summary 229
- References 229 Exercises 230

7. Synthesis of Separation Trains 231

- 7.0 Objectives 231
- 7.1 Introduction 231
 - Feed Separation System 232
 - Phase Separation of Reactor Effluent 232
 - Industrial Separation Operations 238
- 7.2 Criteria for Selection of Separation Methods 241
 - Phase Condition of the Feed as a Criterion 242
 - Separation Factor as a Criterion 242
 - Reason for the Separation as a Criterion 246
- 7.3 Selection of Equipment 246
 - Absorption, Stripping, and Distillation 246
 - Liquid-Liquid Extraction 247
 - Membrane Separation 247
 - Adsorption 247
 - Leaching 247
 - Crystallization 247
 - Drying 248
- 7.4 Sequencing of Ordinary Distillation Columns for the Separation of Nearly Ideal Fluid Mixtures 248
 - Column Pressure and Type of Condenser 248
 - Number of Sequences of Ordinary Distillation Columns 249

- Heuristics for Determining Favorable Sequences 251
 - Marginal Vapor Rate Method 253
 - Complex and Thermally Coupled Distillation Columns 255
 - 7.5 Sequencing of Operations for the Separation of Nonideal Fluid Mixtures 258
 - Azeotropy 259
 - Residue Curves 263
 - Simple Distillation Boundaries 266
 - Distillation Towers 266
 - Distillation Lines 267
 - Computing Azeotropes for Multicomponent Mixtures 269
 - Distillation-Line Boundaries and Feasible Product Compositions 269
 - Heterogeneous Distillation* 271
 - Multiple Steady States 275
 - Pressure-Swing Distillation 277
 - Membranes, Adsorbers, and Auxiliary Separators 279
 - Reactive Distillation 279
 - Separation Train Synthesis 282
 - 7.6 Separation Systems for Gas Mixtures 288
 - Membrane Separation by Gas Permeation 289
 - Adsorption 290
 - Absorption 291
 - Partial Condensation and Cryogenic Distillation 291
 - 7.7 Separation Sequencing for Solid-Fluid Systems 291
 - 7.8 Summary 294
 - References 294 Exercises 295
- 8. Reactor-Separator-Recycle Networks (CD-ROM) 300, CD-8-1**
 - 8.0 Objectives 300, CD-8-1
 - 8.1 Introduction CD-8-2
 - 8.2 Locating the Separation Section with Respect to the Reactor Section CD-8-3
 - 8.3 Tradeoffs in Processes Involving Recycle CD-8-11
 - 8.4 Optimal Reactor Conversion CD-8-13
 - 8.5 Recycle to Extinction CD-8-17
 - 8.6 Snowball Effects in the Control of Processes Involving Recycle CD-8-23
 - 8.7 Summary CD-8-23
 - References CD-8-24 Exercises CD-8-24
- 9. Second-Law Analysis (CD-ROM) 301**
 - 9.0 Objectives 301, CD-9-1
 - 9.1 Introduction CD-9-3
 - 9.2 The System and the Surroundings CD-9-5
 - 9.3 Energy Transfer CD-9-7
 - 9.4 Thermodynamic Properties CD-9-9
 - Typical Entropy Changes CD-9-11
 - Thermodynamic Availability CD-9-13
 - Typical Availability Changes CD-9-15
 - 9.5 Equations for Second-Law Analysis CD-9-20
 - 9.6 Examples of Lost-Work Calculations CD-9-25
 - 9.7 Thermodynamic Efficiency CD-9-30
 - 9.8 Causes of Lost Work CD-9-33
 - 9.9 Three Examples of Second-Law Analysis CD-9-34
 - 9.10 Summary CD-9-52
 - References CD-9-52 Exercises CD-9-53
- 10. Heat and Power Integration 302**
 - 10.0 Objectives 302
 - 10.1 Introduction 303
 - 10.2 Minimum Utility Targets 306
 - Temperature-Interval (TI) Method 307
 - Composite Curve Method 310
 - Linear Programming Method 312
 - 10.3 Networks for Maximum Energy Recovery 316
 - Stream Matching at the Pinch 316
 - Mixed-Integer Linear Programming 320
 - 10.4 Minimum Number of Heat Exchangers 326
 - Reducing the Number of Heat Exchangers—Breaking Heat Loops 326
 - Reducing the Number of Heat Exchangers—Stream Splitting 330
 - 10.5 Threshold Approach Temperature 333
 - 10.6 Optimum Approach Temperature 335
 - 10.7 Superstructures for Minimization of Annual Costs 338
 - 10.8 Multiple Utilities 341
 - Designing HENs Assisted by the Grand Composite Curve 342
 - 10.9 Heat-Integrated Distillation Trains 346
 - Impact of Operating Pressure 346
 - Multiple-Effect Distillation 349
 - Heat Pumping, Vapor Recompression, and Reboiler Flashing 350
 - 10.10 Heat Engines and Heat Pumps 352
 - Positioning Heat Engines and Heat Pumps 355
 - Optimal Design 357
 - 10.11 Summary 360
 - Heat Integration Software 361
 - References 361 Exercises 361
- 11. Mass Integration 367**
 - 11.0 Objectives 367
 - 11.1 Introduction 367

- 11.2 Minimum Mass-Separating Agent 369
 - Approach to Phase Equilibrium 370
 - Concentration-Interval (CI) Method 370
 - Composite-Curve Method 374
- 11.3 Mass Exchange Networks for Minimum External MSA 377
 - Stream Matching at the Pinch 377
 - Stream Splitting at the Pinch 378
- 11.4 Minimum Number of Mass Exchangers 380
 - Reducing the Number of Mass Exchangers—Breaking Mass Loops 380
- 11.5 Advanced Topics 381
- 11.6 Summary 381
- References 382 Exercises 382

12. Optimal Design and Scheduling of Batch Processes 384

- 12.0 Objectives 384
- 12.1 Introduction 384
- 12.2 Design of Batch Process Units 386
 - Batch Processing 386
 - Fed-Batch Processing 387
 - Batch-Product Removal 389
- 12.3 Design of Reactor-Separator Processes 391
- 12.4 Design of Single Product Processing Sequences 395
 - Batch Cycle Times 395
 - Intermediate Storage 398
 - Batch Size 398
- 12.5 Design of Multiproduct Processing Sequences 399
 - Scheduling and Designing Multiproduct Plants 399
- 12.6 Summary 401
- References 401 Exercises 401

Part Three DETAILED DESIGN, EQUIPMENT SIZING, AND OPTIMIZATION—CONFIGURED PRODUCT DESIGN

13. Heat Exchanger Design 405

- 13.0 Objectives 405
- 13.1 Introduction 405
 - Heat Duty 406
 - Heat Transfer Media 407
 - Temperature-Driving Force for Heat Transfer 410
 - Pressure Drop 413
- 13.2 Equipment for Heat Exchange 414
 - Double-Pipe Heat Exchangers 414
 - Shell-and-Tube Heat Exchangers 415
 - Air-Cooled Heat Exchangers 421
 - Compact Heat Exchangers 422

- Furnaces 424
- Temperature-Driving Forces in Shell-and-Tube Heat Exchangers 424
- 13.3 Heat Transfer Coefficients and Pressure Drop 428
 - Estimation of Overall Heat Transfer Coefficients 430
 - Estimation of Individual Heat Transfer Coefficients and Frictional Pressure Drop 430
 - Turbulent Flow in Straight, Smooth Ducts, Pipes, and Tubes of Circular Cross Section 432
 - Turbulent Flow in the Annular Region between Straight, Smooth, Concentric Pipes of Circular Cross Section 433
 - Turbulent Flow on the Shell Side of Shell-and-Tube Heat Exchangers 434
 - Heat Transfer Coefficients for Laminar-Flow, Condensation, Boiling, and Compact Heat Exchangers 436
- 13.4 Design of Shell-and-Tube Heat Exchangers 436
- 13.5 Summary 439
- References 441 Exercises 441

14. Separation Tower Design 443

- 14.0 Objectives 443
- 14.1 Operating Conditions 443
- 14.2 Fenske-Underwood-Gilliland (FUG) Shortcut Method for Ordinary Distillation 445
- 14.3 Kemsler Shortcut Method for Absorption and Stripping 446
- 14.4 Rigorous Multicomponent, Multi-Equilibrium-Stage Methods with a Simulator 449
- 14.5 Plate Efficiency and HETP 451
- 14.6 Tower Diameter 453
 - Tray Towers 453
 - Packed Towers 454
- 14.7 Pressure Drop and Weeping 455
- 14.8 Summary 458
- References 458 Exercises 459

15. Pumps, Compressors, and Expanders 460

- 15.0 Objectives 460
- 15.1 Pumps 460
 - Centrifugal Pumps 461
 - Positive-Displacement Pumps 464
 - Pump Models in Simulators 466
- 15.2 Compressors and Expanders 467
 - Centrifugal Compressors 467
 - Positive-Displacement Compressors 468
 - Expanders 469
 - Compressor and Expander Models in Simulators 470
- 15.3 Summary 471
- References 471 Exercises 471

16. Cost Accounting and Capital Cost Estimation 472

- 16.0 Objectives 472
- 16.1 Accounting 473
 - Debits and Credits 473
 - The Annual Report 474
 - The Balance Sheet 474
 - The Income Statement 477
 - The Cash Flow Statement 478
 - Financial Ratio Analysis 479
 - Cost Accounting 481
- 16.2 Cost Indexes and Capital Investment for Commodity Chemicals 483
 - Cost Indexes 483
 - Commodity Chemicals 485
 - Economy of Scale and the Six-Tenths Factor 486
 - Typical Plant Capacities and Capital Investments for Commodity Chemicals 487
- 16.3 Capital Investment Costs 488
 - Direct Materials and Labor (M&L) 490
 - Indirect Costs 491
 - Other Investment Costs 493
 - Example of an Estimate of Capital Investment 496
- 16.4 Estimation of the Total Capital Investment 497
 - Method 1. Order-of-Magnitude Estimate (Based on the Method of Hill, 1956) 498
 - Method 2. Study Estimate (Based on the Overall Factor Method of Lang, 1947a,b, 1948) 500
 - Method 3. Preliminary Estimate (Based on the Individual Factors Method of Guthrie, 1969, 1974) 503
- 16.5 Purchase Costs of the Most Widely Used Process Equipment 505
 - Pumps and Electric Motors 506
 - Pump and Motor Purchase Costs 508
 - Fans, Blowers, and Compressors 514
 - Heat Exchangers 522
 - Fired Heaters 525
 - Pressure Vessels and Towers for Distillation, Absorption, and Stripping 527
- 16.6 Purchase Costs of Other Chemical Processing Equipment 536
 - Adsorption Equipment 536
 - Agitators (Propellers and Turbines) 537
 - Autoclaves 537
 - Crystallizers 538
 - Drivers Other than Electric Motors 538
 - Dryers 538
 - Dust Collectors 539
 - Evaporators 540
 - Fired Heaters for Specific Purposes 540
 - Liquid-Liquid Extractors 541

- Membrane Separations 542
- Mixers for Powders, Pastes, and Doughs 542
- Power Recovery 542
- Screens 542
- Size Enlargement 543
- Size Reduction Equipment 543
- Solid-Liquid Separation Equipment (Thickeners, Clarifiers, Filters, Centrifuges, and Expression) 544
- Solids Handling Systems 547
- Storage Tanks and Vessels 549
- Vacuum Systems 550
- Wastewater Treatment 557

- 16.7 Equipment Cost Estimation Using the Aspen Icarus Process Evaluator (IPE) (CD-ROM) 557, CD-16.7-1
- 16.8 Summary 557
- References 558 Exercises 558

17. Annual Costs, Earnings, and Profitability Analysis 563

- 17.0 Objectives 563
- 17.1 Introduction 564
- 17.2 Annual Sales Revenues, Production Costs, and the Cost Sheet 565
 - Sales Revenue 565
 - Feedstocks 565
 - Utilities 567
 - Labor-Related Operations, O 574
 - Maintenance, M 575
 - Operating Overhead 576
 - Property Taxes and Insurance 576
 - Depreciation, D 577
 - Cost of Manufacture, COM 577
 - Total Production Cost, C 577
 - Pretax (Gross) Earnings and After-Tax (Net) Earnings (Profit) 579
- 17.3 Working Capital and Total Capital Investment 580
- 17.4 Approximate Profitability Measures 581
 - Return on Investment (ROI) 581
 - Payback Period (PBP) 582
 - Venture Profit (VP) 583
 - Annualized Cost (C_A) 584
 - Product Selling Price for Profitability 585
- 17.5 Time Value of Money 585
 - Compound Interest 586
 - Nominal and Effective Interest Rates 588
 - Continuous Compounding of Interest 589
 - Annuities 590
 - Present Worth of an Annuity 594
 - Comparing Alternative Equipment Purchases 595

17.6	Cash Flow and Depreciation	597
	Depreciation	598
	Depletion	604
17.7	Rigorous Profitability Measures	606
	Net Present Value (NPV)	606
	Investor's Rate of Return (IRR or DCFRR)	607
	Inflation	609
17.8	Profitability Analysis Spreadsheet	
	(CD-ROM)	611, CD-17.8-1
	General Instructions For Use of Profitability	
	Analysis-1.0.xls,	CD-17.8-1
17.9	Summary	611
	References	611
	Exercises	611

18. Optimization of Process Flowsheets 616

18.0	Objectives	616
18.1	Introduction	616
18.2	General Formulation of the Optimization	
	Problem	617
	Objective Function and Decision Variables	618
	Equality Constraints	618
	Inequality Constraints	619
	Lower and Upper Bounds	619
18.3	Classification of Optimization Problems	619
18.4	Linear Programming (LP)	623
18.5	Nonlinear Programming (NLP) with a Single	
	Variable	626
	Golden-Section Search	626
18.6	Conditions for Nonlinear Programming (NLP)	
	by Gradient Methods with Two or More	
	Decision Variables	630
	General Formulation	630
	Stationarity Conditions	631
	Solution of the Stationarity Equations	631
18.7	Optimization Algorithm	632
	Repeated Simulation	634
	Infeasible Path Approach	634
	Compromise Approach	635
	Practical Aspects of Flowsheet	
	Optimization	635
18.8	Flowsheet Optimization—Case Studies	636
18.9	Summary	640
	References	640
	Exercises	640

19. Product Design 644

19.0	Objectives	644
19.1	Steps in Designing Industrial and Consumer	
	Products	644
	Six Sigma in Product Design	
	and Manufacturing	646
19.2	Hemodialysis Device	650
19.3	Solar Desalination Unit	656

19.4	Hand Warmer	659
	GRABBER MYCOAL Hand Warmer	660
	Zap Pak Heat Pack	660
19.5	Multilayer Polymer Mirrors	662
19.6	CVD of Polysilicon in IC Manufacture	663
	Initial Dissociation	663
19.7	Germ-Killing Surfaces	667
19.8	Insect Repelling Wristband	667
19.9	Automotive Fuel Cell	668
19.10	Environmentally Safe Refrigerants	671
19.11	Summary	672
	References	673
	Exercises	674

Part Four

PLANTWIDE CONTROLLABILITY ASSESSMENT

20. The Interaction of Process Design and Process Control 679

20.0	Objectives	679
20.1	Introduction	679
20.2	Control System Configuration	684
	Classification of Process Variables	684
	Selection of Controlled (Output) Variables	685
	Selection of Manipulated Variables	685
	Selection of Measured Variables	685
	Degree-of-Freedom Analysis	686
20.3	Qualitative Plantwide Control System	
	Synthesis	692
20.4	Summary	702
	References	702
	Exercises	702

21. Flowsheet Controllability Analysis 705

21.0	Objectives	705
21.1	Generation of Linear Models in Standard	
	Forms	706
21.2	Quantitative Measures for Controllability	
	and Resiliency	710
	Steady-State RGA (Bristol, 1966)	710
	Properties of the Steady-State RGA	712
	Dynamic RGA (McAvoy, 1983)	712
	The RGA as a Measure of Process Sensitivity	
	to Uncertainty	718
	Using the Disturbance Cost to Assess Resiliency	
	to Disturbances	719
21.3	Toward Automated Flowsheet C&R	
	Diagnosis	723
	Shortcut C&R Diagnosis	723
	Generating Low-Order Dynamic Models	724
	Steady-State Gain Matrix, K^c	724
	Dynamics Matrix, $\underline{\Psi}^c\{s\}$	724

21.4	Controller Loop Definition and Tuning	732
	Definition of PID Control Loop	732
	Controller Tuning	733
	Model-Based PI-Controller Tuning	734
21.5	Case Studies	736
	Case Study 21.1 Exothermic Reactor Design for the Production of Propylene Glycol (Example 21.1 Revisited)	736
	Case Study 21.2 Two Alternative Heat-Exchanger Networks (Examples 20.1 and 20.5 Revisited)	741
	Case Study 21.3 Interaction of Design and Control in the MCB Separation Process	747
21.6	MATLAB for C&R Analysis	755
21.7	Summary	757
References	759	Exercises 759

Part Five

DESIGN REPORT

22. Written Reports and Oral Presentations 765

22.0	Objectives	765
22.1	Contents of the Written Report	766
	Opening Sections of the Report	766
	Remaining Sections of the Process Design Report	767
	Remaining Sections of the Product Design Report	767
	Preparation of the Written Report	772
	Sample Design Reports	775
22.2	Oral Design Presentation	776
	Typical Presentation	776
	Media for the Presentation	776
	Rehearsing the Presentation	776

	Written Handout	776
	Evaluation of the Oral Presentation	776
	Videotapes and DVDs	778
22.3	Award Competition	778
22.4	Summary	779
References	779	

APPENDIXES

I. Residue Curves for Heterogeneous Systems 781

II. Design Problem Statements (CD-ROM) 782, CD-A-II-1

A-II.0	Contents and Introduction	CD-A-II-1
A-II.1	Petrochemicals	CD-A-II-6
A-II.2	Petroleum Products	CD-A-II-26
A-II.3	Gas Manufacture	CD-A-II-27
A-II.4	Foods	CD-A-II-35
A-II.5	Pharmaceuticals	CD-A-II-38
A-II.6	Polymers	CD-A-II-41
A-II.7	Environmental-Air Quality	CD-A-II-48
A-II.8	Environmental-Water Treatment	CD-A-II-63
A-II.9	Environmental-Soil Treatment	CD-A-II-67
A-II.10	Environmental-Miscellaneous	CD-A-II-71

III. Materials of Construction 785
