

CONTENTS

Volume 1

Mathematics and Physics in Chemical Engineering

Mathematical in Chemical Engineering	3
Mathematical Modeling	165
Transport Phenomena	271
Fluid Mechanics	371
Design of Experiments	423
Computational Fluid Dynamics	463
Model Reactors and Their Design Equations	487
Fundamentals of Chemical Engineering	
Estimation of Physical Properties	537
Construction Materials in Chemical Industry	605
Corrosion	653
Abrasion and Erosion	735
Mechanical Properties and Testing of Metallic Materials	761
Nondestructive Testing	785
On-Line Monitoring of Chemical Reactions	821

Volume 2

Plant and Process Design

Process Development	873
Separation Processes, Introduction	915
Solid-Liquid Separation, Introduction	923
Solid-Solid Separation, Introduction	931
Mixing, Introduction	939
Solids Technology, Introduction	941
Reactor Types and Their Industrial Applications	953
Chemical Plant Design and Construction	987
Pinch Technology	1075
Pilot Plants	1083
Scale-Up in Chemical Engineering	1093
Biochemical Engineering	1117
Energy Management in Chemical Industry	1187
Plant and Process Safety	1205
Environmental Management in the Chemical Industry	1331
Author	1359
Subject Index	1363
