

CONTENTS

**REACTOR CONTROL SYSTEMS**

Control Polymerization Reactors	1
Compatible Control for Chemical Reactor Systems	5
Computer Control of an Acetylene Hydrogenation Process	7
PVC Reactor Strategies	18

**pH CONTROL SYSTEMS**

Characteristics of pH Control	24
Advanced Control Systems for Waste pH Processes	29
Dynamic Modeling of pH in Aqueous Systems	35
Analysis and Control of Continuous Neutralization – A Case Study	40
Feed-forward, Adaptive pH Control	48

**CONTROL OF DISTILLATION COLUMNS**

Introduction and Overview of Distillation Column Control	54
Material Balance Control in Distillation Columns	59
Distillation Simulation and Composition Control	70
Control of Sidestream and Energy Conservation Distillation Towers	76

**STATE-OF-THE ART OF MULTIVARIABLE CONTROL OF PROCESSES**

Linear and Nonlinear Effects of Interaction	85
Design of a Multivariable System for Control of Acid Composition in a Continuous Multi-Stage Nitrogen Process	92
Model Reference Control-Control Without Quality Measurement	100
Computer Control of an Ammonia Reform Furnace	102
Practical Features for Control of Multivariable Systems in a Real Environment	106

**UNIT OPERATIONS (Compressors, Furnaces, Steam Generators and Distribution Systems)**

Control of Steam Generators	114
Graphical Interpretation of Centrifugal Compressor Controls	120
Analyzers, Sample Systems, and Processes – United We Stand, Divided We Fall	125
