

CONTENTS

CHAPTER 1 VAPOUR-PHASE CHROMATOGRAPHY

1.1	Introduction	1
1.2	Theory of gas-liquid chromatography	2
1.3	Factors affecting chromatographic separation	4
1.4	The laboratory chromatography	7
1.5	On-line process chromatography	8
1.6	Process chromatograph requirements	9
1.7	Industrial process chromatographs	20
1.8	Process chromatograph applications	44

CHAPTER 2 VISCOSITY MEASUREMENT

2.1	Introduction	46
2.2	Classical methods of measurement	47
2.3	Turbulent flow	52
2.4	The effect of temperature	52
2.5	Non-Newtonian liquids	52
2.6	Viscosity measurement in the laboratory	53
2.7	Process viscometers	54
2.8	Applications	65

CHAPTER 3 DISTILLATION ANALYSERS

3.1	Introduction	67
3.2	Distillation	68
3.3	Laboratory distillation methods	71
3.4	Process distillation analysers	72
3.5	Applications	90

CHAPTER 4 FLASH POINT MEASUREMENT

4.1	Introduction	91
4.2	Laboratory measurement	91
4.3	Process flash point analysers	93
4.4	Application	102

CHAPTER 5 MEASUREMENT OF POUR POINT AND CLOUD POINT

5.1	Introduction	104
5.2	Laboratory methods of measurement	104
5.3	Process analysers for pour point measurement	106
5.4	Process analysers for cloud point measurement	112

CHAPTER 6 VAPOUR PRESSURE MEASUREMENT

6.1	Introduction	118
6.2	Laboratory measurements	119
6.3	Process vapour pressure analysers	120
6.4	Applications	125

CHAPTER 7 OXYGEN MEASUREMENT

7.1	Introduction	127
7.2	Paramagnetic properties of oxygen	127
7.3	Catalytic combustion methods	131
7.4	Electrochemical oxidation methods	132
7.5	The effect of oxygen on a galvanic cell	132
7.6	Process oxygen analysers	133
7.7	Sample-handling systems for oxygen analysers	159
7.8	Oxygen analyser applications	162

CHAPTER 8 pH AND REDOX MEASUREMENT

8.1	Introduction	164
8.2	Basic Principles	164
8.3	Process pH and redox analysers	174
8.4	pH control systems	189

CHAPTER 9 TRACE GAS ANALYSIS

9.1	Introduction	195
9.2	Applications	195
9.3	Laboratory measurements	196
9.4	Continuous on-line trace gas analysers	199

CHAPTER 10 ULTRAVIOLET, VISBLE AND INFRARED ABSORPTION

10.1	Introduction	219
10.2	Theoretical considerations	220
10.3	Laboratory measurements	225
10.4	Process analyser design	230
10.5	Process analysers for the ultraviolet and visible regions	231
10.6	Process analysers for the infrared region	239
10.7	Applications	249

CHAPTER 11 MOISTURE MEASUREMENT

11.1	Introduction	251
11.2	Definitions	252
11.3	Laboratory methods of moisture measurement	253
11.4	Process moisture analysers	254
11.5	On-line analysers for moisture measurement in solid materials	269
11.6	Applications	272

CHAPTER 12 DENSITY AND SPECIFIC GRAVITY MEASUREMENT

12.1	Introduction	274
12.2	Definitions	274
12.3	Methods of measurement density of liquids	275
12.4	Methods of measuring density or specific gravity of gases	279
12.5	Process analysers for density and specific gravity measurement	280
12.6	Applications	305

CHAPTER 13 WATER QUALITY MEASUREMENT

13.1	Introduction	308
13.2	Measurement parameters	308
13.3	Process analysers for water quality measurement	318

CHAPTER 14 GASEOUS FUEL QUALITY MEASUREMENT

14.1	Introduction	341
14.2	Definitions	341
14.3	Laboratory methods of measurement	343
14.4	Process analysers	343

CHAPTER 15 MEASUREMENT OF OCTANE NUMBER

15.1	Introduction	359
15.2	Production of gasoline	359
15.3	Laboratory methods of measurement	362
15.4	Continuous on-line octane analysers	367

CHAPTER 16 OTHER MEASUREMENTS

16.1	Introduction	381
16.2	Thermal conductivity measurement	381
16.3	Combustible gas analysis	386
16.4	Refractive index measurement	394
16.5	Titrimetric analysis	399
16.6	Measurement of salt in crude petroleum	402
16.7	Measurement of sulphur in liquid hydrocarbons	404

CHAPTER 17 SAMPLE-HANDLING SYSTEMS

17.1	Introduction	409
17.2	Sample system requirements	409
17.3	Sample-point location	410
17.4	Sample-transport systems	411
17.5	Sample-handling system components	419
17.6	Multi-stream sampling systems	424
