

CONTENTS

42. Intracrystalline diffusion	1
43. Vapor adsorption on zeolites considered as crystalline	37
44. Description of adsorption equilibria of vapors on zeolites over wide ranges of temperature and pressure	69
45. Ultraviolet spectroscopic investigation of molecular adsorption and ionization of molecules adsorbed on pressure	86
46. Calculation of some adsorption properties of zeolites by statistical methods	97
47. Heats of immersion of outgassed ion - exchanged zeolites	105
48. Calorimetric measurements of the systems zeolite / ammonia and zeolite /N-heptane in a range of temperature from 0° to 300°C	132
49. Low – temperature calorimetric study of methane in linde 5A sieve	138
50. Theoretical predictions of equilibrium properties and diffusivities of carbon dioxide in type A molecular sieves	144
51. Diffusion of carbon dioxide in type 5A molecular sieve	155
52. Kinetics of adsorption on A zeolites. Temperature effects	164
53. Kinetics of ethane sorption on 4A molecular sieve crystal powder and pellets	171
54. Heats of adsorption on X- type zeolites containing different alkali metal cations	184
55. Counterdiffusion of liquid hydrocarbons in type Y zeolites	193
56. Multicomponent adsorption isotherms on hydrogen – mordenite	209
57. Influence of zeolite action nature on its adsorption and chromatographic properties	217
58. Kinetics of sorption processes as a basis to estimate the distribution of cations in the unit cell of zeolites	229
59. Separation of 2,7 –dimethylnaphthalene from 2,6 –dimethylnaphthalene with molecular sieves	238
60. Diffusion in granular zeolites	247
61. Some perspectives on zeolite catalysis	260
62. Structural aspects of catalysis with zeolites cracking of cumene and hexanes	284
63. Catalytic activity and the nature of active centers in zeolites	315
64. Correlations between catalytic, acidic, and exchange properties of zeolites X and Y	327
65. Acidity, accessibility, and stability of hydroxyl groups in Y zeolites	337
66. Development of acidity in the sodium Y zeolite	346
67. Catalytic activity of alkaline earth hydrogen Y zeolites	354
68. Acidic and oxidizing properties of rare earth exchanged Y zeolites	362
69. Infrared spectroscopy and cumene cracking studies on single	

component rare earth forms of synthetic faujasite	374
70. Isomerization of n- butenes over ion – exchanged X zeolites	389
71. Physical and catalytic properties of the zeolites mordenite	400
72. Cyclohexane hydroisomerization over palladium – H – mordenite	410
73. Synthetic erionite and selective hydrocracking	417
74. Hydrogen generation by steam reformation of N- Hexane over zeolite catalysts	426
75. Structural and catalytic properties of nickel modified molecular sieves	434
76. Catalytic properties of synthetic mordenite in Isomerization hydrogenation and hydroisomerization of hydrocarbons	441
75. Present and future directions in zeolite research	415
76. Index	455
