

CONTENTS

1. An introduction to membrane process	1
2. Ultrafiltration fundamentals and theories	54
3. Mechanism of fouling	100
4. Membranes and membrane modules	127
5. Membrane distillation	174
6. Reverse osmosis fundamental and theories	206
7. Structure of water and aqueous system	240
8. Permeation of vapors	271
9. Theory and application of dialysis and counter diffusion	362
10. Design requirement for batch and continuous Ultrafiltration determination of membrane area	391
11. Membrane process economics	405
12. Synthetic membranes	448
13. Generation of nitrogen by thin film composite RO membrane	470
14. Membrane application in biotechnology	493
15. Laboratory session : Introduction	497
16. Status reports	526
