Series Preface XI
Preface of Volume 1 XV
List of Contributors XXI
Recommended Notation XXV
EFCE Working Party on Drying: Address List XXXI

1 Comprehensive Drying Models based on Volume Averaging: Background, Application and Perspective *1*
P. Perré, R. Rémond, I.W. Turner
1.1 Microscopic Foundations of the Macroscopic Formulation *1*
1.2 The Macroscopic Set of Equations *6*
1.3 Physical Phenomena Embedded in the Equations *7*
1.3.1 Low-temperature Convective Drying *7*
1.3.1.1 The Constant Drying Rate Period *8*
1.3.1.2 The Decreasing Drying Rate Period *9*
1.3.2 Drying at High Temperature: The Effect of Internal Pressure on Mass Transfer *10*
1.4 Computational Strategy to Solve the Comprehensive Set of Macroscopic Equations *11*
1.4.1 The Control-volume Finite-element (CV-FE) Discretization Procedure *13*
1.4.2 Evaluation of the Tensor Terms at the CV Face *14*
1.4.3 Solution of the Nonlinear System *15*
1.4.3.1 Outer (Nonlinear) Iterations *16*
1.4.3.2 Construction of the Jacobian *17*
1.4.3.3 Inner (Linearized System) Iterations *17*
1.5 Possibilities Offered by this Modeling Approach: Convective Drying *19*
1.5.1 High-temperature Convective Drying of Light Concrete *19*
1.5.1.1 Test 1: Superheated Steam *20*
1.5.1.2 Tests 2 and 3: Moist Air, Soft and Severe Conditions *22*

Modern Drying Technology. Edited by Evangelos Tsotsas and Arun S. Mujumdar
Copyright © 2007 WILEY-VCH Verlag GmbH & Co. KGaA. All rights reserved
ISBN: 978-3-527-31556-7

1.5.2 Typical Drying Behavior of Softwood: Difference Between Sapwood and Heartwood *25*
1.6 Possibilities Offered by this Modeling Approach: Less-common Drying Configurations *29*
1.6.1 Drying with Volumetric Heating *29*
1.6.2 The Concept of Identity Drying Card (IDC) *32*
1.6.3 Drying of Highly Deformable Materials *34*
1.7 Homogenization as a Way to Supply the Code with Physical Parameters *37*
1.8 The Multiscale Approach *42*
1.8.1 Limitations of the Macroscopic Formulation *42*
1.8.2 The Stack Model: An Example of Multiscale Model *43*
1.8.2.1 Global Scale *46*
1.8.2.2 Local Scale *46*
1.8.2.3 Coupling Approach *46*
1.8.2.4 Samples Simulations *47*
1.8.2.5 Accounting for Wood Variability *49*
1.8.2.6 Accounting for Drying Quality *50*
Conclusion *52*

2 Pore-network Models: A Powerful Tool to Study Drying at the Pore Level and Understand the Influence of Structure on Drying Kinetics *57*
T. Metzger, E. Tsotsas, M. Prat
2.1 Introduction *57*
2.2 Isothermal Drying Model *58*
2.2.1 Model Description *58*
2.2.1.1 Network Geometry and Corresponding Data Structures *59*
2.2.1.2 Boundary-layer Modeling *60*
2.2.1.3 Saturation of Pores and Throats *62*
2.2.1.4 Vapor Transfer *63*
2.2.1.5 Capillary Pumping of Liquid *64*
2.2.1.6 Cluster Labeling *65*
2.2.1.7 Drying Algorithm *66*
2.2.2 Simulation Results and Experimental Validation *68*
2.2.3 Gravity and Liquid Viscosity – Stabilized Drying Front *71*
2.2.3.1 Modeling Gravity *71*
2.2.3.2 Modeling Liquid Viscosity *72*
2.2.3.3 Dimensionless Numbers and Length Scales *75*
2.2.3.4 Phase Distributions and Drying Curves *77*
2.2.4 Film Flow *79*
2.2.5 Wettability Effects *83*
2.2.6 First Drying Period *85*
2.3 Model Extensions *87*

2.3.1 Heat Transfer *87*
2.3.2 Multicomponent Liquid *92*
2.4 Influence of Pore Structure *92*
2.4.1 Pore Shapes *92*
2.4.2 Coordination Number *94*
2.4.3 Bimodal Pore-size Distributions *95*
2.4.4 Outlook *100*
2.5 Towards an Assessment of Continuous Models *100*

3 Continuous Thermomechanical Models using Volume-averaging Theory *103*
F. Couture, P. Bernada, M. A. Roques
3.1 Introduction *103*
3.2 Modeling *105*
3.2.1 Nature of Product Class *106*
3.2.2 Averaged Internal Equations *107*
3.2.2.1 State Equations and Volume Conservation *108*
3.2.2.2 Mass-conservation Equations *109*
3.2.2.3 Momentum-conservation Equations *109*
3.2.2.4 Energy-conservation Equations *112*
3.2.3 Boundary Conditions for Convective Drying *113*
3.3 Simulation *114*
3.3.1 Numerical Resolution Technique *114*
3.3.2 Comparison between Real Viscoelatic and Assumed Elastic Behavior *115*
3.4 Liquid Pressure as Driving Force *120*
3.5 Conclusions *122*

4 Continuous Thermohydromechanical Model using the Theory of Mixtures *125*
S. J. Kowalski
4.1 Preliminaries *125*
4.2 Global Balance Equations *126*
4.3 Constitutive Equations in the Skeletal Frame of Reference *130*
4.4 Rate Equations for Heat and Mass Transfer *132*
4.5 Differential Equations for Heat and Mass Transfer *134*
4.5.1 Differential Equation for Heat Transfer *134*
4.5.2 Determination of the Microwave Heat Source $\mathfrak{R}$ *135*
4.5.3 Differential Equation for Mass Transfer *139*
4.6 Thermomechanical Equations for a Drying Body *141*
4.6.1 Physical Relations *141*
4.6.2 Differential Equations for Body Deformation *143*
4.7 Drying of a Cylindrical Sample made of Kaolin *144*
4.7.1 Convective Drying of a Kaolin Cylinder *144*
4.7.2 Microwave Drying of a Kaolin Cylinder *150*

4.8 Final Remarks *152*
Acknowledgments *152*
Additional Notation used in Chapter 4 *153*

5 CFD in Drying Technology – Spray-Dryer Simulation *155*
S. Blei, M. Sommerfeld
5.1 Introduction *155*
5.1.1 Introduction to CFD *155*
5.1.2 Introduction to Multiphase Flow Modeling *158*
5.1.3 State-of-the-art in Spray-dryer Computations *160*
5.2 The Euler–Lagrange Approach: an Extended Model for Spray-dryer Calculations *162*
5.2.1 Fluid-phase Modeling *163*
5.2.2 Fundamentals of Lagrangian Particle Tracking *166*
5.2.2.1 Drag Force *167*
5.2.2.2 Virtual Mass Force *168*
5.2.2.3 Basset History Force *168*
5.2.2.4 Forces Caused by Pressure Gradients in the Fluid *168*
5.2.2.5 Magnus Force *168*
5.2.2.6 Saffman Force *169*
5.2.2.7 Gravitational Force *169*
5.2.3 Particle Tracking *169*
5.2.4 Particle Turbulent Dispersion Modeling *171*
5.2.5 Two-way Coupling Procedure *173*
5.3 Droplet-drying Models *173*
5.3.1 Introduction *173*
5.3.2 Review of Droplet-drying Models *175*
5.3.3 Exemplary Drying Model for Whey-based Milk Products *176*
5.3.4 Numerical Implementation *178*
5.4 Collisions of Particles *181*
5.4.1 Introduction *181*
5.4.2 Extended Stochastic Collision Model *182*
5.4.3 Modeling of Particle Collisions: Coalescence and Agglomeration *187*
5.4.3.1 Surface-tension Dominated Droplets (STD Droplets) *187*
5.4.3.2 Droplets Dominated by Viscous Forces (VD Droplets) *188*
5.4.3.3 Dry Particles *189*
5.4.4 Collisions of Surface-tension Dominated Droplets (STD–STD) *190*
5.4.5 Collisions of Viscous Droplets *190*
5.4.6 Collisions of Dry Particles *191*
5.5 Example of a Spray-dryer Calculation *192*
5.5.1 Geometry and Spatial Discretization of the Spray Dryer *192*
5.5.2 Results for the Fluid Phase *193*
5.5.3 Results of the Dispersed Phase *195*
5.6 Prediction of Product Properties *200*
5.6.1 Particle-size Distribution *200*

5.6.2 Heat Damage *201*
5.6.3 Particle Morphology *201*
5.7 Summary *203*
Additional Notation used in Chapter 5 *204*

6 Numerical Methods on Population Balances *209*
J. Kumar, M. Peglow, G. Warnecke, S. Heinrich, E. Tsotsas, L. Mörl, M. Hounslow, G. Reynolds
6.1 Introduction *209*
6.2 Pure Breakage *214*
6.2.1 Population-balance Equation *214*
6.2.2 Numerical Methods *214*
6.2.2.1 The Cell-average Technique *216*
6.2.2.2 The Finite-volume Scheme *222*
6.3 Pure Aggregation *225*
6.3.1 Population-balance Equation *225*
6.3.2 Numerical Methods *226*
6.3.2.1 The Fixed-pivot Technique *226*
6.3.2.2 The Cell-average Technique *227*
6.3.2.3 The Finite-volume Scheme *231*
6.4 Pure Growth *233*
6.4.1 Population balance Equation *233*
6.4.2 Numerical Methods *233*
6.5 Combined Aggregation and Breakage *239*
6.6 Combined Aggregation and Nucleation *242*
6.7 Combined Growth and Aggregation *244*
6.8 Combined Growth and Nucleation *245*
6.9 Multidimensional Population Balances *247*
6.9.1 Reduced Model *247*
6.9.2 Complete Model *250*
Additional Notation used in Chapter 6 *256*

7 Process-systems Simulation Tools *261*
I. C. Kemp
7.1 Introduction *261*
7.1.1 Summary of Contents *261*
7.1.2 The Solids Processing Challenge *262*
7.1.3 Types of Software for Dryers *263*
7.2 Numerical Calculation Procedures *263*
7.2.1 Categorization of Dryer Models *264*
7.2.2 Equipment and Material Model *265*
7.2.3 Parametric Models *266*
7.3 Heat and Mass Balances *268*
7.4 Scoping Design Methods *269*
7.4.1 Continuous Convective Dryers *269*

7.4.2 Continuous-contact Dryers *270*
7.4.3 Batch Dryers *270*
7.4.4 Simple Allowance for Falling-rate Drying *271*
7.5 Scaling Methods *272*
7.5.1 Basic Scale-up Principles *273*
7.5.2 Integral Model *274*
7.5.3 Application to Fluidized-bed Dryers *274*
7.6 Detailed Design Models *276*
7.6.1 Incremental Model *277*
7.6.2 Application to Pneumatic Conveying, Rotary and Band Dryers *278*
7.6.2.1 Pneumatic Conveying Dryers *278*
7.6.2.2 Cascading Rotary Dryers *281*
7.6.3 Advanced Methods – Computational Fluid Dynamics (CFD) *281*
7.7 Ancillary Calculations *283*
7.7.1 Processing Experimental Data *283*
7.7.2 Humidity and Psychrometry *284*
7.7.2.1 British Standard BS1339 for Humidity Calculations *284*
7.7.2.2 Plotting Psychrometric Charts *286*
7.7.3 Physical-properties Databanks *286*
7.8 Process Simulators *287*
7.8.1 Current Simulators and their Limitations *287*
7.8.2 Potential Developments *288*
7.9 Expert Systems and Decision-making Tools *289*
7.9.1 Dryer Selection *289*
7.9.1.1 Tree-search Algorithms *289*
7.9.1.2 Matrix-type Rule-based Algorithms *289*
7.9.1.3 Qualitative Information *292*
7.9.1.4 Alternative Tree-search Approach *292*
7.9.2 Troubleshooting and Problem Solving in Dryers *294*
7.10 Knowledge Bases and Qualitative Information *295*
7.10.1 Internet Websites *295*
7.10.2 The Process Manual Knowledge Base *295*
7.11 Commercialization of Drying Software *296*
7.11.1 Barriers to Drying-software Development *297*
7.11.1.1 Complexity of the Calculations *297*
7.11.1.2 Difficulties in Modeling Solids *297*
7.11.1.3 Limited Market and Lack of Replicability *298*
7.11.1.4 Changes in Operating-system Software *298*
7.11.2 The Future: Possible Ways Forward *300*
7.12 Conclusions *301*
7.12.1 Range of Application of Software in Drying *301*
7.12.2 Overall Conclusion *302*
Additional Notation used in Chapter 7 *303*

Index *307*

Series Preface *XIII*
Preface of Volume 2 *XVII*
List of Contributors *XXIII*
Recommended Notation *XXVII*
EFCE Working Party on Drying: Address List *XXXIII*

1 **Measurement of Average Moisture Content and Drying Kinetics for Single Particles, Droplets and Dryers** *1*
Mirko Peglow, Thomas Metzger, Geoffrey Lee, Heiko Schiffter, Robert Hampel, Stefan Heinrich, and Evangelos Tsotsas
1.1 Introduction and Overview *1*
1.2 Magnetic Suspension Balance *2*
1.2.1 Determination of Single Particle Drying Kinetics – General Remarks *2*
1.2.2 Configuration and Periphery of Magnetic Suspension Balance *4*
1.2.3 Discussion of Selected Experimental Results *6*
1.3 Infrared Spectroscopy and Dew Point Measurement *10*
1.3.1 Measurement for Particle Systems – General Remarks *10*
1.3.2 Experimental Set-Up *12*
1.3.3 Principle of Measurement with the Infrared Spectrometer *13*
1.3.4 Dew Point Mirror for Calibration of IR Spectrometer *14*
1.3.5 Testing the Calibration *17*
1.3.6 A Case Study: Determination of Single Particle Drying Kinetics of Powdery Material *20*
1.4 Coulometry and Nuclear Magnetic Resonance *24*
1.4.1 Particle Moisture as a Distributed Property *24*
1.4.2 Modeling the Distribution of Solids Moisture at the Outlet of a Continuous Fluidized Bed Dryer *25*
1.4.3 Challenges in Validating the Model *27*
1.4.4 Coulometry *28*
1.4.5 Nuclear Magnetic Resonance *33*
1.4.6 Combination of Both Methods *37*

Modern Drying Technology, Vol. 2: Experimental Techniques
Edited by Evangelos Tsotsas and Arun S. Mujumdar
Copyright © 2009 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
ISBN: 978-3-527-31557-4

1.4.7 Experimental Moisture Distributions and Assessment of Model *37*
1.5 Acoustic Levitation *41*
1.5.1 Introductory Remarks *41*
1.5.2 Some Useful Definitions *42*
1.5.3 Forces in a Standing Acoustic Wave *43*
1.5.4 Interactions of a Droplet with the Sound Pressure Field *47*
1.5.4.1 Deformation of Droplet Shape *48*
1.5.4.2 Primary and Secondary Acoustic Streaming *48*
1.5.4.3 Effects of Changing Droplet Size *53*
1.5.5 Single Droplet Drying in an Acoustic Levitator *55*
1.5.5.1 Drying Rate of a Spherical Solvent Droplet *55*
1.5.5.2 Drying Rate of an Acoustically Levitated Solvent Droplet *58*
1.5.5.3 Drying Rate of Droplets of Solutions or Suspensions *58*
1.5.6 A Case Study: Single Droplet Drying of Water and an Aqueous Carbohydrate Solution *59*
1.5.6.1 A Typical Acoustic Levitator *60*
1.5.6.2 Evaporation Rates of Acoustically-Levitated Pure Water Droplets *61*
1.5.6.3 Evaporation Rates and Particle Formation with Aqueous Mannitol Solution Droplets *63*
1.6 Concluding Remarks *66*
References *69*

2 Near-Infrared Spectral Imaging for Visualization of Moisture Distribution in Foods *73*
Mizuki Tsuta
2.1 Introduction *73*
2.2 Principles of Near-Infrared Spectral Imaging *74*
2.2.1 Near-Infrared Spectroscopy *74*
2.2.2 Lambert–Beer Law *74*
2.2.3 Hyperspectrum *76*
2.2.4 Classification by Spectral Information Acquisition Technique *77*
2.2.5 Classification by Spatial Information Acquisition Technique *78*
2.3 Image Processing *79*
2.3.1 Extraction of Spectral Images from a Hyperspectrum *79*
2.3.2 Noise and Shading Correction *79*
2.3.3 Conversion into Absorbance Image *80*
2.3.4 Acquisition and Pretreatment of Spectral Data *81*
2.3.5 Analysis of Absorbance Spectra *82*
2.3.6 Visualization of Constituent Distribution *82*
2.4 Applications of Near-Infrared Spectral Imaging for Visualization of Moisture Distribution *83*
2.4.1 Specification of the Absorption Bands of Water and Ice *83*
2.4.1.1 Imaging Apparatus *83*
2.4.1.2 Acquisition of Hyperspectra of Water and Ice *84*
2.4.1.3 Spectral Analysis *84*

2.4.2 Visualization of Moisture Distribution inside Soybean Seeds *85*
2.4.2.1 Sample *85*
2.4.2.2 Acquisition of Hyperspectra *86*
2.4.2.3 Spectral Analysis *86*
2.4.2.4 Visualization of Moisture Distribution *87*
2.5 Future Outlook *88*
References *89*

3 Magnetic Resonance Imaging for Determination of Moisture Profiles and Drying Curves *91*
Stig Stenström, Catherine Bonazzi, and Loïc Foucat
3.1 Introduction *91*
3.2 Principles of MRI for Determination of Moisture Profiles *93*
3.2.1 General Considerations *93*
3.2.2 Basic NMR *94*
3.2.2.1 Nuclear Magnetic Moment and Larmor Relation *94*
3.2.2.2 Net Magnetization and Radio Frequency Excitation *94*
3.2.2.3 Relaxation and NMR Signal *95*
3.2.2.4 Factors Influencing Relaxation Times *97*
3.2.3 Imaging Principles *97*
3.2.3.1 Projection of an Object (1D Imaging) *98*
3.2.3.2 Two-Dimensional Imaging *98*
3.2.3.3 Slice Selection *99*
3.2.3.4 Three-Dimensional Imaging *100*
3.2.4 Imaging Sequences *101*
3.2.4.1 The Spin–Echo (SE) Sequence *101*
3.2.4.2 The Gradient–Echo (GE) Sequence *102*
3.3 MRI Applications to Drying of Paper, Pulp and Wood Samples *102*
3.3.1 Some General Data about the Materials *102*
3.3.2 Overview of Previous Results *104*
3.3.2.1 Pulp, Paper and Cellulose Samples *104*
3.3.2.2 Wood *106*
3.3.3 Determination of Moisture Gradients in Cardboard Samples *108*
3.3.3.1 Experimental Conditions *108*
3.3.3.2 Drying Experiments and MRI Parameters *109*
3.3.3.3 Calibration Procedure *111*
3.3.3.4 Results for Drying Profiles *114*
3.3.3.5 Diffusion Measurements *119*
3.4 MRI Applications to Drying of Agricultural and Food Samples *125*
3.4.1 MRI and Transport Phenomena in Agricultural and Food Products *125*
3.4.2 NMR for Characterization of Biological and Food Products *126*
3.4.3 MRI for Measurement of Transient Moisture Profiles in Food and Biological Samples *128*
3.4.3.1 General Data *128*
3.4.3.2 Measurement of Moisture Profiles in a Gel during Drying *130*

3.4.4 Non-Intrusive Measurement by MRI of Moisture Profiles in Paddy Rice Kernels during Drying *132*
3.4.4.1 Experimental Set-Up *132*
3.4.4.2 NMR Preliminary Experiments *132*
3.4.4.3 NMR Imaging Experiments *134*
3.4.4.4 Conversion of the MRI Signal to Water Content *135*
3.4.4.5 Imaging Results and Moisture Profiles *135*
3.5 Conclusion *137*
References *139*

4 Use of X-Ray Tomography for Drying-Related Applications *143*
Angélique Léonard, Michel Crine, and Frantisek Stepanek
4.1 Fundamentals and Principles *143*
4.1.1 Introduction *143*
4.1.2 Physical Principles *144*
4.1.3 Reconstruction *148*
4.2 Instrumentation *153*
4.2.1 Geometry of CT Systems *153*
4.2.2 X-Ray Macrotomography (or Industrial Tomography) *155*
4.2.3 X-Ray Microtomography *156*
4.2.4 Synchrotron X-Ray Microtomography *157*
4.3 Image Processing *157*
4.3.1 Algorithms for 3D Image Filtering and Segmentation *157*
4.3.2 Calculation of Morphological Characteristics *163*
4.3.2.1 Phase Volume Fraction *164*
4.3.2.2 Cluster Volume Distribution *164*
4.3.2.3 Percolation *165*
4.3.2.4 Interfacial Area *166*
4.3.2.5 Interface Curvature *166*
4.4 Applications *167*
4.4.1 Convective Drying of Sludge *167*
4.4.1.1 Sludge Individual Extrudates *167*
4.4.1.2 Sludge Packed Bed *170*
4.4.2 Drying Optimization of Resorcinol-Formaldehyde Xerogels *173*
4.4.3 Contact Drying of a Packed Bed *176*
4.4.3.1 Experimental Set-Up *176*
4.4.3.2 Spatio-Temporal Evolution of the Drying Front *177*
4.5 Future Outlook *180*
References *182*

5 Measuring Techniques for Particle Formulation Processes *187*
Stefan Heinrich, Niels G. Deen, Mirko Peglow, Mike Adams, Johannes A.M. Kuipers, Evangelos Tsotsas, and Jonathan P.K. Seville
5.1 Introduction *187*
5.2 Measurement of Particle Size *188*

5.2.1 In-Line Particle Size Measurement *188*
5.2.1.1 Measuring Principle *188*
5.2.1.2 Instrumentation *189*
5.2.1.3 Applications *190*
5.2.2 Off-Line Particle Size Measurement *194*
5.2.2.1 Measuring Principle *194*
5.2.2.2 Measurement Results: Size and Shape *196*
5.3 Measurement of Particle Concentrations, Velocities, and Hydrodynamic Stability *201*
5.3.1 Introduction *201*
5.3.2 Particle Detection *202*
5.3.3 Particle Image Velocimetry *208*
5.3.4 Spectral Analysis of Pressure Drop Fluctuations *218*
5.3.5 Positron Emission Particle Tracking *223*
5.3.5.1 Particle Circulation Time *224*
5.3.6 Fiber Optical Probe Measurement Technique *228*
5.3.6.1 Calibration *231*
5.3.6.2 Experimental Results *232*
5.4 Measurement of Mechanical Stability of Particles during Fluidized Bed Processing *236*
5.4.1 Introduction *236*
5.4.2 Measurement of Attrition Dust with an Isokinetic Sensor *237*
5.4.2.1 Theory *237*
5.4.2.2 Experimental Results *240*
5.4.3 Measurement of Attrition Dust and Overspray with an On-Line Particle Counter *243*
5.4.3.1 Lorentz–Mie Theory as Measuring Principle *243*
5.4.3.2 Measurement in High Concentrations with Small Optical Measuring Volume *244*
5.4.3.3 Calibration and Evaluation *246*
5.4.3.4 Experimental Results *249*
5.5 Characterization of the Mechanical Properties of Partially and Fully Saturated Wet Granular Media *251*
5.5.1 Introduction *251*
5.5.2 Interparticle Forces *252*
5.5.2.1 Mechanical Interactions *252*
5.5.2.2 Adhesive Interactions *254*
5.5.2.3 Cohesive Interactions *256*
5.5.2.4 Frictional and Lubrication Interactions *259*
5.5.3 Mechanical Properties of Wet Granular Media *261*
5.5.3.1 Elastoplastic Measurements *262*
5.5.3.2 Failure Properties *266*
5.6 Conclusions *269*
References *272*

6	**Determination of Physical Properties of Fine Particles, Nanoparticles and Particle Beds** *279* *Werner Hintz, Sergiy Antonyuk, Wolfgang Schubert, Bernd Ebenau, Aimo Haack, and Jürgen Tomas*
6.1	Introduction to Common Particle Properties *279*
6.2	Analysis of Particle Size Distribution *280*
6.2.1	Image Analysis by Optical and Scanning Electron Microscopy *280*

6.3.3.5	Measurement Set-Up and Test Method *305*
6.3.4	Measurement of Particle Adhesion *307*
6.3.4.1	Particle Adhesion Effects *307*
6.3.4.2	Comparison between Different Adhesion Forces *308*
6.3.4.3	Survey of Adhesion Force Test Methods *309*
6.3.4.4	Particle Interaction Apparatus According to Butt *310*
6.3.5	Measurement of Particle Restitution Coefficient *312*
6.3.6	Particle Abrasion and Breakage Tests *318*
6.3.6.1	Survey of Test Methods and Principles *318*
6.3.6.2	Compression Test *321*
6.3.6.3	Impact Test *325*
6.4	Testing of Particle Bed Properties *328*
6.4.1	Bulk Density and Tapping Density *328*
6.4.2	Angle of Repose of a Moving Particle Bed *329*
6.4.3	Flow Behavior of Cohesive and Compressible Bulk Solids *329*
6.4.4	Flow Criteria of Preconsolidated Cohesive Powders on a Physical Basis *332*
6.4.5	Translational Shear Cell according to Jenike *335*

6.4.5.1 The Shear Testing Technique SSTT according to ICE *337*
6.4.6 Ring Shear Tester according to Schulze for Dry Powder *339*
6.4.7 Press Shear Cell according to Reichmann for Wet Filter Cake *340*
6.4.8 Survey of Selected Direct and Indirect Shear Testers *344*
6.4.8.1 The Biaxial Shear Tester according to Schwedes *344*
6.4.8.2 The Uniaxial Tester according to Enstad *344*
6.4.8.3 Couette Device by Tardos *346*
6.4.8.4 Powder Flow Analyzer ShearScan TS12 by AnaTec *346*
6.4.8.5 Survey of Different Shear Testers *348*
6.5 Measurement of Particle Bed Movement in Rotary Drums by High-Speed Camera *348*
6.6 Conclusions *353*
References *356*

Index *363*

Series Preface *XIII*
Preface of Volume 3 *XVII*
List of Contributors *XXI*
Recommended Notation *XXV*
EFCE Working Party on Drying: Address List *XXXI*

1 **Quality Changes in Food Materials as Influenced by Drying Processes** *1*
Catherine Bonazzi and Elisabeth Dumoulin
1.1 Introduction *1*
1.2 Biochemical Reactions Induced by Drying *5*
1.3 Physical Transformations During Drying *9*
1.4 Mechanical Transformations Induced by Drying *14*
1.5 Storage and Rehydration of Food Products *16*
1.6 Conclusion *17*
References *18*

2 **Impact of Drying on the Mechanical Properties and Crack Formation in Rice** *21*
Catherine Bonazzi and Francis Courtois
2.1 Introduction *21*
2.2 Impact of Drying Conditions on Head Rice Yield for Paddy and Parboiled Rice *24*
2.3 Characterization of Fissures Formation by Image Analysis Techniques *28*
2.4 Characterization of the Mechanical Properties of the Rice Material *33*
2.4.1 Stress–Strain Relationships for Linear Materials *34*
2.4.2 Failure Strength in Rice Grains *36*
2.5 Modeling the Impact of Drying on the Final Quality of Rice Grains *39*
2.6 Conclusion *45*
References *46*

3	**Characterization and Control of Physical Quality Factors During Freeze-Drying of Pharmaceuticals in Vials** *51*
	Julien Andrieu and Séverine Vessot
3.1	Introduction *51*
3.2	Characterization Methods of the Key Quality Factors During Freeze-Drying of Pharmaceuticals in Vials *52*
3.2.1	State Diagram, Melting Curves, Vitreous Transition, Collapse Temperature *54*
3.2.2	Characterization Methods: DSC, MDSC, Freeze-Drying Microscopy *55*
3.2.3	Ice Structure and Morphology: Cold Chamber Optical Microscopy *55*
3.2.4	Heat Flux Heterogeneity in the Sublimation Chamber *57*
3.2.5	Permeability of Freeze-Drying Cake: Pressure Rise Tests *59*
3.2.6	Estimation of Mean Product Temperature *61*
3.3	Influence of Freezing and Freeze-Drying Parameters on Physical Quality Factors *63*
3.3.1	Influence of Freezing Protocol on Ice Morphology *63*
3.3.1.1	Influence of Freezing Rate *64*
3.3.1.2	Influence of Vial Type and Filling Height *66*
3.3.1.3	Annealing *67*
3.3.2	Controlled Nucleation *70*
3.3.2.1	Controlled Nucleation by Ultrasound Sonication *70*
3.3.2.2	Effect of Ultrasound on Structural and Morphological Properties *72*
3.3.3	Relationship between Nucleation Temperatures and Sublimation Rates *73*
3.3.4	Freeze-Dried Cake Morphology *74*
3.3.4.1	Water Vapor Mass Transfer Resistance *74*
3.3.4.2	Freeze-Dried Layer Permeability *76*
3.3.5	Importance of Temperature Control *78*
3.3.6	Influence of Operating Conditions on Sublimation Kinetics *79*
3.4	Product Quality and Stability During Drying and Storage *83*
3.4.1	Product Quality and Formulation *83*
3.4.2	Product Quality and Polymorphism *84*
3.5	Conclusions *85*
	References *87*
4	**In-Line Product Quality Control of Pharmaceuticals In Freeze-Drying Processes** *91*
	Antonello A. Barresi and Davide Fissore
4.1	Introduction *91*
4.2	Control of the Freezing Step *94*
4.3	Monitoring of the Primary Drying *96*

4.3.1 Monitoring of Single Vials 99
4.3.2 Monitoring of a Group of Vials 103
4.3.3 Monitoring of the Whole Batch 106
4.3.3.1 Detection of the Endpoint of the Primary Drying 106
4.3.3.2 Monitoring the Primary Drying Using the Measurement of the Sublimation Flux 113
4.3.3.3 Monitoring the Primary Drying Using Methods Based on the PRT 114
4.4 Control of the Primary Drying 125
4.5 Monitoring and Control of Secondary Drying 135
4.6 Quality by Design 139
4.7 Continuous Freeze-Drying 142
4.8 Conclusion 143
References 146

5 Understanding and Preventing Structural Changes During Drying of Gels 155
Thomas Metzger, Angélique Léonard, Wahbi Jomaa, and Hajime Tamon
5.1 Introduction 155
5.2 Gels and Their Applications – Quality Aspects 156
5.2.1 Preparation of Wet Gels 156
5.2.1.1 Silica Gels 156
5.2.1.2 Resorcinol-Formaldehyde (RF) Gels 157
5.2.2 Properties of Dry Gels 158
5.2.3 Applications of Dry Gels 160
5.3 Structural Characterization of Gels – Quality Assessment 162
5.3.1 Characterization of Wet Gels 162
5.3.1.1 Small Angle X-Ray Scattering (SAXS) 162
5.3.1.2 Thermoporometry 164
5.3.2 Characterization of Dry Gels 166
5.3.2.1 Nitrogen Adsorption 166
5.3.2.2 Mercury Porosimetry 168
5.3.2.3 Other Methods 171
5.3.3 Characterization of Gels During Drying 172
5.4 Drying Methods for Gels – Quality Loss 174
5.4.1 Convective Drying 174
5.4.1.1 Introduction 174
5.4.1.2 Shrinkage 175
5.4.1.3 Differential Shrinkage and Stress 177
5.4.1.4 Cracking 180
5.4.2 Freeze-drying 182
5.4.3 Supercritical Drying 185
5.4.3.1 Supercritical Drying of the Initial Solvent 185
5.4.3.2 Low-Temperature Process with CO_2 187

5.5 Advanced Drying Techniques – Preserving Quality *189*
5.5.1 Subcritical Drying *189*
5.5.2 Freeze-Drying *190*
5.5.2.1 General Remarks *190*
5.5.2.2 RF and Carbon Cryogels *192*
5.5.2.3 Ice Templating (for Silica Gels) *195*
5.5.3 Vacuum Drying *197*
5.5.4 Convective Drying *198*
5.5.4.1 Preliminary Remarks *198*
5.5.4.2 Preventing Shrinkage and Cracks by Aging (Silica Gels) *199*
5.5.4.3 Making Shrinkage Reversible by Surface Modification (Silica Gels) *201*
5.5.4.4 RF Gels – From First Results to a Systematic Investigation *204*
5.5.4.5 Aging of RF Gels *208*
5.5.4.6 Concluding Remarks *209*
5.5.5 Microwave Drying *210*
5.6 Advanced Modeling of Convective Drying – Understanding Quality *211*
5.6.1 Macroscopic Models *211*
5.6.1.1 General Remarks *211*
5.6.1.2 Diffusion Model *211*
5.6.1.3 More Rigorous Modeling *217*
5.6.2 Development of A Pore-Scale Model *218*
5.7 Summary *220*
References *223*

6 Morphology and Properties of Spray-Dried Particles *231*
Peter Walzel and Takeshi Furuta
6.1 Introduction *231*
6.2 Morphology of Spray-Dried Particles *234*
6.2.1 Classification of the Morphology of Spray-Dried Powders *234*
6.2.2 Solutions of Low Molecular Weight Substances *236*
6.2.3 Solutions of Polymers *240*
6.2.4 Suspensions Containing Small Solid Particles *240*
6.2.5 Suspensions Containing Large Solid Particles *244*
6.2.6 Complex Dispersions Such as Emulsions and Other Formulations *244*
6.2.6.1 Hard Shell Particles *244*
6.2.6.2 Gelatinization *245*
6.2.6.3 Microencapsulated Flavor Powders Formed from Emulsions *245*
6.2.6.4 Particles from Proteins, Enzymes and Carrier Materials *247*
6.2.7 Particles Obtained in Freeze Spray Drying *251*

6.2.8 Particles Formed in Integrated Fluidized Beds *253*
6.3 Retention of Flavor in Spray-Dried Food Products *253*
6.3.1 General Remarks on Microencapsulation *253*
6.3.2 Encapsulation of Flavor by Spray Drying *255*
6.3.2.1 Theory and Mechanism *255*
6.3.2.2 Microencapsulation of Hydrophilic Flavors *255*
6.3.2.3 Spray Drying of Emulsified Hydrophobic Flavors *256*
6.3.2.4 Factors Affecting the Retention of Emulsified Hydrophobic Flavors During Spray Drying *257*
6.3.2.5 Stickiness of the Spray-Dried Powder *260*
6.3.3 Release and Oxidation of the Encapsulated Flavor During Storage *261*
6.3.3.1 Influence of Glass Temperature on the Storage Stability of the Encapsulated Flavor *261*
6.3.3.2 Release of Flavor from Spray-Dried Powder During Storage *262*
6.3.3.3 Oxidation of Encapsulated Flavor During Storage *267*
6.3.3.4 Relaxation Process Correlation by Glass Transition Temperature *267*
6.4 Encapsulation and Microencapsulation of Enzymes and Oil by Spray Drying *269*
6.4.1 Microencapsulation of Enzymes by Spray Drying *269*
6.4.2 Stress on Proteins During the Spray Drying Processes *270*
6.4.2.1 Adsorption Stress *270*
6.4.2.2 Shear Stress *271*
6.4.2.3 Thermal and Dehydration Stress *271*
6.4.3 Protein Encapsulation Theory by Spray Drying *272*
6.4.4 Spray Drying of Protein Solutions *273*
6.4.4.1 Drying of a Single Suspended Droplet *273*
6.4.4.2 Stabilization of Enzymes During Spray Drying: Effects of Formulation Composition *274*
6.4.4.3 Effect of Process Variables on the Stabilization of Enzymes During Spray Drying *275*
6.4.5 Microencapsulation of Oil *278*
6.4.5.1 Spray Drying of Oil Emulsions *278*
6.4.5.2 Oxidation of Lipids Encapsulated in Spray-Dried Particles *279*
6.5 General Quality Aspects *280*
6.5.1 Porosity of Spray-Dried Particles and Species Distribution *280*
6.5.2 Strength of Particles and Attrition *281*
6.5.3 Bulk Density and Product Flowability *282*
6.5.4 Residual Moisture *282*
6.5.5 Reconstitution Behavior *283*
6.6 Concluding Remarks *284*
References *286*

7	**Particle Formulation in Spray Fluidized Beds**	*295*
	Mirko Peglow, Sergiy Antonyuk, Michael Jacob, Stefan Palzer, Stefan Heinrich, and Evangelos Tsotsas	
7.1	Introduction	*295*
7.2	General Principles of Particle Formulation in Spray Fluidized Beds	*296*
7.3	Influence of Material Properties	*299*
7.3.1	Adhesion Mechanisms and Mechanical Strength of Agglomerates	*299*
7.3.1.1	Material Structure and Properties	*300*
7.3.1.2	Van der Waals Forces	*301*
7.3.1.3	Capillary Forces Due to Liquid Bridges Between Particles	*303*
7.3.1.4	Viscous Forces in Sinter Bridges Between Amorphous Particles	*304*
7.3.1.5	Mechanical Strength of Agglomerates	*308*
7.3.2	Breakage of Agglomerates and of Granulated Products	*315*
7.3.2.1	Elastic–Brittle Breakage Behavior	*316*
7.3.2.2	Elastic–Plastic Breakage Behavior	*317*
7.3.2.3	Plastic Breakage Behavior	*319*
7.3.2.4	Breakage of Granules with Layered Structure	*320*
7.3.3	Consideration of Primary Particle Properties in Agglomeration	*321*
7.4	Influence of Operating Conditions	*324*
7.4.1	Mechanical Strength of Granulated Particles	*324*
7.4.1.1	Influence of Binder Content in the Sprayed Solution	*325*
7.4.1.2	Influence of the Particle Retention Time	*326*
7.4.1.3	Influence of Process Temperature	*327*
7.4.2	Catalyst Impregnation in Fluidized Beds	*329*
7.5	Influence of Apparatus Design	*332*
7.5.1	Apparatus Design Features with an Influence on Product Quality	*332*
7.5.2	Residence Time Distribution	*338*
7.5.3	Dispersive Growth in Batch Granulation	*344*
7.5.4	Discrete Particle Modeling of a Wurster Coater	*349*
7.5.4.1	Principles of the DPM	*350*
7.5.4.2	Parameters for the DPM Simulation	*351*
7.5.4.3	Influence of the Spout Velocity	*352*
7.5.4.4	Influence of the Wurster Gap Distance	*355*
7.6	Neural Networks, Encapsulation	*357*
7.7	Stochastic Discrete Modeling of Agglomeration	*363*
7.7.1	General Principles	*363*
7.7.2	Computational Method	*364*
7.7.3	Results	*367*

7.7.3.1 Effect of Liquid Flow Rate and Viscosity *367*
7.7.3.2 Thermal Effects *367*
7.7.3.3 Effect of Particle Porosity *369*
7.8 Summary and Outlook *372*
References *374*

Series Preface *XI*
Preface of Volume 4 *XV*
List of Contributors *XIX*
Recommended Notation *XXIII*
EFCE Working Party on Drying; Address List *XXIX*

1 **Fundamentals of Energy Analysis of Dryers** *1*
Ian C. Kemp
1.1 Introduction *1*
1.2 Energy in Industrial Drying *2*
1.3 Fundamentals of Dryer Energy Usage *3*
1.3.1 Evaporation Load *3*
1.3.2 Dryer Energy Supply *4*
1.3.3 Evaluation of Energy Inefficiencies and Losses: Example *5*
1.3.3.1 Dryer Thermal Inefficiencies *6*
1.3.3.2 Inefficiencies in the Utility (Heat Supply) System *8*
1.3.3.3 Other Energy Demands *13*
1.3.4 Energy Cost and Environmental Impact *14*
1.3.4.1 Primary Energy Use *14*
1.3.4.2 Energy Costs *14*
1.3.4.3 Carbon Dioxide Emissions and Carbon Footprint *15*
1.4 Setting Targets for Energy Reduction *16*
1.4.1 Energy Targets *16*
1.4.2 Pinch Analysis *17*
1.4.2.1 Basic Principles *17*
1.4.2.2 Application of Pinch Analysis to Dryers *19*
1.4.2.3 The Appropriate Placement Principle Applied to Dryers *21*
1.4.2.4 Pinch Analysis and Utility Systems *24*
1.4.3 Drying in the Context of the Overall Process *25*
1.5 Classification of Energy Reduction Methods *26*
1.5.1 Reducing the Heater Duty of a Convective Dryer *28*
1.5.2 Direct Reduction of Dryer Heat Duty *29*
1.5.2.1 Reducing the Inherent Heat Requirement for Drying *29*

1.5.2.2 Altering Operating Conditions to Improve Dryer Efficiency *30*
1.5.3 Heat Recovery and Heat Exchange *31*
1.5.3.1 Heat Exchange Within the Dryer *31*
1.5.3.2 Heat Exchange with Other Processes *32*
1.5.4 Alternative Utility Supply Systems *32*
1.5.4.1 Low Cost utilities *33*
1.5.4.2 Improving Energy Supply System Efficiency *33*
1.5.4.3 Combined Heat and Power *34*
1.5.4.4 Heat Pumps *36*
1.6 Case Study *37*
1.6.1 Process Description and Dryer Options *37*
1.6.2 Analysis of Dryer Energy Consumption *38*
1.6.3 Utility Systems and CHP *42*
1.7 Conclusions *43*
References *45*

2 Mechanical Solid–Liquid Separation Processes and Techniques *47*
Harald Anlauf
2.1 Introduction and Overview *47*
2.2 Density Separation Processes *51*
2.2.1 Froth Flotation *51*
2.2.2 Sedimentation *54*
2.3 Filtration *61*
2.3.1 Cake Filtration *61*
2.3.2 Sieving and Blocking Filtration *72*
2.3.3 Crossflow Micro- and Ultra-Filtration *73*
2.3.4 Depth and Precoat Filtration *75*
2.4 Enhancement of Separation Processes by Additional Electric or Magnetic Forces *80*
2.5 Mechanical/Thermal Hybrid Processes *83*
2.6 Important Aspects of Efficient Solid–Liquid Separation Processes *85*
2.6.1 Mode of Apparatus Operation *85*
2.6.2 Combination of Separation Apparatuses *87*
2.6.3 Suspension Pre-Treatment Methods to Improve Separation Conditions *91*
2.7 Conclusions *94*
References *95*

3 Energy Considerations in Osmotic Dehydration *99*
Hosahalli S. Ramaswamy and Yetenayet Bekele Tola
3.1 Scope *99*
3.2 Introduction *100*
3.3 Mass Transfer Kinetics *101*
3.3.1 Pretreatments *101*
3.3.2 Product *102*

3.3.3 Osmotic Solution *103*
3.3.4 Treatment Conditions *103*
3.4 Modeling of Osmotic Dehydration *104*
3.5 Osmotic Dehydration – Two Major Issues *105*
3.5.1 Quality Issues *105*
3.5.2 Energy Issues *106*
3.5.2.1 Osmo-Convective Drying *107*
3.5.2.2 Osmo-Freeze Drying *109*
3.5.2.3 Osmo-Microwave Drying *111*
3.5.2.4 Osmotic-Vacuum Drying *113*
3.6 Conclusions *114*
References *116*

4 Heat Pump Assisted Drying Technology – Overview with Focus on Energy, Environment and Product Quality *121*
Sachin V. Jangam and Arun S. Mujumdar
4.1 Introduction *121*
4.2 Heat Pump Drying System – Fundamentals *122*
4.2.1 Heat Pump *122*
4.2.2 Refrigerants *125*
4.2.3 Heat Pump Dryer *127*
4.2.4 Advantages and Limitations of the Heat Pump Dryer *130*
4.3 Various Configurations/Layout of a HPD *131*
4.4 Heat Pumps – Diverse Options and Advances *132*
4.4.1 Multi-Stage Heat Pump *132*
4.4.2 Cascade Heat Pump System *133*
4.4.3 Use of Heat Pipe *134*
4.4.4 Chemical Heat Pump (CHP) *135*
4.4.5 Absorption Refrigeration Cycle *138*
4.5 Miscellaneous Heat Pump Drying Systems *140*
4.5.1 Solar-Assisted Heat Pump Drying *140*
4.5.2 Infrared-Assisted Heat Pump Dryer *143*
4.5.3 Microwave-Assisted Heat Pump Drying *143*
4.5.4 Time-Varying Drying Conditions and Multi-Mode Heat Pump Drying *145*
4.5.5 Heat Pump Assisted Spray Drying *147*
4.5.6 Modified Atmosphere Heat Pump Drying *148*
4.5.7 Atmospheric Freeze Drying Using Heat Pump *149*
4.6 Applications of Heat Pump Drying *150*
4.6.1 Food and Agricultural Products *150*
4.6.2 Drying of Wood/Timber *150*
4.6.3 Drying of Pharmaceutical/Biological Products *152*
4.7 Sizing of Heat Pump Dryer Components *153*
4.8 Future Research and Development Needs in Heat Pump Drying *156*
References *158*

5 Zeolites for Reducing Drying Energy Usage *163*
Antonius J. B. van Boxtel, Moniek A. Boon, Henk C. van Deventer, and Paul J. Th. Bussmann
5.1 Introduction *163*
5.2 Zeolite as an Adsorption Material *164*
5.2.1 Zeolite *164*
5.2.2 Comparing the Main Sorption Properties of Zeolite with other Adsorbents *166*
5.3 Using Zeolites in Drying Systems *168*
5.3.1 Drying Systems *168*
5.3.2 Direct Contact Drying *169*
5.3.3 Air Dehumidification *170*
5.4 Energy Efficiency and Heat Recovery *173*
5.4.1 Defining Energy Efficiency *173*
5.4.2 Energy Recovery for a Single-Stage System *174*
5.4.3 Energy Recovery in a Multi-Stage System *176*
5.4.4 Energy Recovery with Superheated Steam *178*
5.5 Realization of Adsorption Dryer Systems *180*
5.5.1 Adsorption Dryer Systems for Zeolite *180*
5.5.2 Adsorption Wheel Versus Packed Bed *181*
5.5.3 Zeolite Mechanical Strength *182*
5.5.4 Long Term Capacity of Zeolite *183*
5.5.5 Zeolite Adsorption Wheel *183*
5.6 Cases *185*
5.6.1 Zeolite-Assisted Drying in the Dairy Industry *185*
5.6.2 Zeolite-Assisted Manure and Sludge Drying *189*
5.6.3 Direct Contact Drying of Seeds with Zeolites *191*
5.7 Economic Considerations *193*
5.8 Perspectives *195*
References *196*

6 Solar Drying *199*
Joachim Müller and Werner Mühlbauer
6.1 Introduction *199*
6.2 Solar Radiation *200*
6.3 Solar Air Heaters *204*
6.4 Design and Function of Solar Dryers *210*
6.4.1 Classification of Solar Dryers *210*
6.4.2 Solar Dryers with Natural Convection for Direct Solar Drying *212*
6.4.3 Solar Dryers with Natural Convection for Indirect Drying *213*
6.4.4 Solar Dryers with Forced Convection for Direct Drying *214*
6.4.5 Solar Dryers with Forced Convection for Indirect Drying *218*
6.4.6 Dryers with Roof-Integrated Solar Air Heaters *223*
6.5 Solar Drying Kinetics *226*
6.5.1 Empirical Drying Curves in Solar Drying *226*

6.5.2 Equilibrium Model for Solar Drying Kinetics *227*
6.6 Control Strategies for Solar Dryers *231*
6.6.1 Airflow Management During the Night *231*
6.6.2 Recirculation of Drying Air *232*
6.6.3 Back-Up Heating Systems *232*
6.7 Economic Feasibility of Solar Drying *234*
6.7.1 Drying of Timber in Brazil *235*
6.7.2 Drying of Tobacco in Brazil *237*
6.8 Conclusions and Outlook *239*
References *242*

7 Energy Issues of Drying and Heat Treatment for Solid Wood and Other Biomass Sources *245*
Patrick Perré, Giana Almeida, and Julien Colin
7.1 Introduction *245*
7.2 Wood and Biomass as a Source of Renewable Material and Energy *245*
7.3 Energy Consumption and Energy Savings in the Drying of Solid Wood *254*
7.3.1 Kiln-Drying of Solid Wood: A Real Challenge *254*
7.3.2 The Conventional Drying of Wood *258*
7.3.2.1 The Design of Conventional Kilns *258*
7.3.2.2 Drying Time and Energy Efficiency *259*
7.3.3 Theoretical Evaluation of the Kiln Efficiency *263*
7.3.4 Two Case Studies of Kiln Efficiency *266*
7.3.5 Rules for Saving Energy *269*
7.3.5.1 Energy Savings in Conventional Kilns *269*
7.3.5.2 Energy Saving by Alternative Technologies *270*
7.4 Preconditioning of Biomass as a Source of Energy: Drying and Heat Treatment *271*
7.4.1 Importance of Biomass Drying as a Preconditioning Step *271*
7.4.1.1 Dryers for Biomass *273*
7.4.1.2 Numerical Approach to the Continuous Drying of Woody Biomass *276*
7.4.2 Interest of Heat Treatment as a Preconditioning Step *281*
7.5 Conclusions *287*
References *289*

8 Efficient Sludge Thermal Processing: From Drying to Thermal Valorization *295*
Patricia Arlabosse, Jean-Henry Ferrasse, Didier Lecomte, Michel Crine, Yohann Dumont, and Angélique Léonard
8.1 Introduction to the Sludge Context *295*
8.1.1 Origin, Production and Valorization Issues *295*
8.1.2 Sludge: A Complex Material *297*
8.1.3 Useful Properties for Energy Valorization *299*

8.2 Sludge Drying Technologies *300*
8.2.1 General Remarks *300*
8.2.2 Convective Drying Methods and Dryer Types *301*
8.2.3 Indirect Contact Drying Methods and Dryer Types *305*
8.2.3.1 Rotor Design and Operation of the Drying Process *306*
8.2.3.2 Drying Performances *308*
8.2.4 Solar Drying and Dryer Types *310*
8.2.5 Combined and Hybrid Drying *311*
8.2.6 Sludge Frying, an Alternative to Conventional Drying *311*
8.2.6.1 Heat and Mass Transfer During Fry-Drying *312*
8.2.6.2 Energy and Environmental Aspects *313*
8.2.7 Pathogen Reduction *314*
8.3 Energy Efficiency of Sludge Drying Processes *315*
8.3.1 Specific Heat Consumption of Sludge Dryers *315*
8.3.2 Towards the Reduction of Energy Consumption Associated with Sludge Drying *316*
8.3.3 Case Studies *316*
8.4 Thermal Valorization of Sewage Sludge *318*
8.4.1 General Description of the Thermal Processes Available for Sewage Sludge *318*
8.4.2 Desired Water Content for Thermal Processes *319*
8.4.3 Including a Drying Step Before Thermal Valorization *320*
8.5 Energy Efficiency of Thermal Valorization Routes *321*
8.5.1 Importance of Dryer Efficiency *321*
8.5.2 Combining Sludge Drying and Thermal Valorization by Integrating on Site *322*
8.6 Conclusions *324*
References *325*
