

CONTENTS

1. Introduction to heat transmission	1
2. Steady conduction	7
3. Transient conduction	31
4. Radiant – heat transmission	55
5. Dimensional analysis	126
6. Flow of fluids	140
7. Natural convection	165
8. Introduction to forced convection	184
9. Heating and cooling inside tubes	202
10. Heating and cooling outside tubes	252
11. Compact exchangers, packed and fluidized systems	282
12. High- velocity flow; rarefied gases	309
13. Condensing vapors	325
14. Boiling liquids	368
15. Applications to design	410
16. Appendix (Tables and charts of data)	443
17. Bibliography and author index	491
18. Subject index	521
