

CONTENTS

1. Introduction	1
2. Industrial applications of fluidized beds	15
3. Fluidization and mapping of regimes	61
4. The dense bed: distributors, gas jets, and pumping power	95
5. Bubbles in dense beds	115
6. Bubbles fluidized beds	137
7. Entrainment and elutriation from fluidized beds	165
8. High – velocity fluidization	193
9. solid movement: mixing, segregation ,and staging	211
10. Gas dispersion and gas interchange in bubbling beds	237
11. Particle – gas mass and heat transfer	257
12. Conversion of gas in catalytic reactions	277
13. Heat transfer between fluidized beds and surfaces	313
14. The RTD and size distribution of solids in fluidized beds	337
15. Circulation systems	359
16. Design for physical operations	397
17. Design of catalytic reactors	429
18. The design of noncatalytic gas – solid reactors	449
19. Author index	481
20. Subject index	487
