

## CONTENTS

|   |            |
|---|------------|
| <b>Part I. Synthesis</b>  | <b>1</b>   |
| 1. Some thermodynamic and kinetic effects related to zeolite crystallization                            | 3          |
| 2. Organic and inorganic agents in the synthesis of molecular sieves                                    | 19         |
| 3. Non – conventional crystalline microporous solids  | 49         |
| 4. Molecular engineering of lamellar solids. I. principles derived from the pillaring of smectite clays | 79         |
| 5. Molecular engineering of layered structures  |            |
| II. Synthetic approaches to some new pillared derivatives   | 91         |
| <b>Part II. Characterization</b>  | <b>105</b> |
| 6. General overview of the characterization of zeolites   | 107        |
| 7. Sorption of single gases and their binary mixtures in zeolites                                       | 133        |
| 8. Frequency – response measurements of diffusion of sorbates in zeolites                               | 151        |
| 9. Diffraction studies of zeolites  | 167        |
| 10. Spectroscopic investigations of zeolite properties  | 193        |
| 11. The impact of NMR spectroscopy in molecular sieve characterization                                  |            |
| I. Low Si /Al ratio materials   | 225        |
| 12. The impact of NMR spectroscopy in molecular sieve characterization                                  |            |
| II. Investigations of highly siliceous systems  | 247        |
| <b>Part III. Modification, reactivity, and catalytic activity</b>                                       | <b>271</b> |
| 13. Modification of zeolites and new routes to ion – exchange   | 273        |
| 14. Zeolite framework substitution reliable characterization methods                                    | 291        |
| 15. Evaluation and tailoring of acid – base properties of zeolites                                      | 303        |
| 16. Evaluation and tailoring of acid – base properties of zeolites                                      | 321        |
| 17. Catalysis by exchanged cations and zeolite framework sites  | 347        |
| 18. Zeolites in oil refining and petrochemistry   | 373        |
| 19. Composition of the carbonaceous compounds responsible for zeolite deactivation. Modes of formation  | 437        |
| 20. Deactivation of zeolites by coking . prevention of deactivation and regeneration                    | 457        |
| <b>Part IV. Novel developments and vistas</b>   | <b>475</b> |
| 21. Molecular sieves with pore openings consisting of more than 12 – T atoms                            | 477        |
| 22. Chemical bonding in zeolites  | 493        |
| 23. Some aspects of molecular shape – selective catalysis with hydrocarbons in zeolites                 | 511        |
| 24. New applications of nonclassical molecular sieve catalysts  | 531        |
| 25. Microporous materials in organic synthesis  | 579        |
| 26. Subject index   | 629        |
