

CONTENTS

1	Basic Concepts	
1.1	Droplet Mists and Sprays	1
1.2	Separation Efficiency	3
2	Methods of Droplet Measurement	
2.1	Fundamental Considerations	7
2.2	Cascade Impactors	8
2.3	Cascades of Frits and Measurement Cyclones	11
2.4	Sampling Technique	11
2.5	Measurements of Separation Efficiency with Cascade Impactors	13
2.6	References	14
3	Introduction to Separators and Separation Processes	
4	Electrostatic Precipitators	
4.1	General	17
4.2	Principle and Theory	17
4.3	Collection Efficiency of Electrostatic Precipitators	20
4.4	Constructional Designs and Practical Experience	22
4.5	References	24
5	Diffusional Separators	
5.1	General	27
5.2	Separation on Single Fibbers	27
5.3	Fiber Demisters as Diffusional Separators	38
5.4	Ceramic Candle Filters	42
5.5	Cartridge Filters, Compressed Air Filters	44
5.6	References	45
6	Impingement Separators	
6.1	Separation Principle	47
6.2	Overview of Impingement Separators	48
6.3	Description of Inertial Separation by Means of the Separation Parameter	51
6.4	References	73

7	Cyclones	
7.1	Construction and Mode of Operation	75
7.2	Cyclone Theory	78
7.3	Fractional Separation Efficiencies as Functions of the Inertial Separation Parameter	80
7.4	Comparison of Theory with Experiment	85
7.5	Approximation Formulae	90
7.6	Calculations	93
7.7	References	97
8	Wave-Plate Separators	
8.1	Design and Mode of Operation	99
8.2	Fundamental Considerations	102
8.3	Investigations of Further Model Separators	110
8.4	Investigations on Commercial Baffle Separators	114
8.5	Separation Parameter and Approximation Formulae	116
8.6	Calculations	119
8.7	References	121
9	Packed Bed Separators	
9.1	Equipment and Mode of Operation	123
9.2	Pressure Drops	125
9.3	Droplet Separation	131
9.4	Approximation Formulae and Calculations	136
9.5	References	139
10	Wire and Fiber Filters	
10.1	General	141
10.2	Theory of Filtration	141
10.3	Wire Demisters	146
10.4	Fiber Filters	155
10.5	Approximation Formulae and Calculations	162
10.6	References	171
11	Wet Scrubbers	
11.1	Basic Considerations	173
11.2	Particle Collection on Washing Liquid Drops	173
11.3	Particle Separation in a Wet Scrubber	177
11.4	Description and Comparison of Individual Scrubbers	180
11.5	Studies on Separation of Mist Droplets in Scrubbers	182
11.6	Limiting Droplet Size and Separation Energy	187
11.7	Additional Remarks	188
11.8	References	189

12	Swirl Flow Separators	
12.1	Construction	191
12.2	Collection Efficiencies of Swirl Tubes. Theoretical Considerations	192
12.3	Experimental Determination of Collection Efficiencies	193
12.4	Droplet Separation in Swirl Flow Tubes as a Function of the Inertial Separation Parameter	196
12.5	References	199
13	Special Separators	
13.1	General Remarks	201
13.2	Pipe Elbows	201
13.3	Circular Baffles	202
13.4	Knock-out Drum	203
13.5	Blowers	203
13.6	Particle Deep-bed Filter. Fluidized Bed Filter	204
13.7	Glass Frits, Packings of Quartz Wool, Impinger Bottles	205
13.8	Other Separators	208
13.9	References	210
14	Practical Experience with Droplet Separators in the Chemical Industry; Selection Criteria and Comparison of Costs	
14.1	Question of Costs	211
14.2	Further Cost Factors and Selection Criteria	213
14.3	Potential Errors and Neglections. Practical Experience	214
14.4	Waste Gas Plumes	216
14.5	Main Fields of Application of Droplet Separators	218
14.6	Physical Properties and Conversion Tables	223
14.7	References	225
	Subject Index	227
