

## CONTENTS

1. Helium Recovery Using Semipermeable Membranes	1
2. A Low-Temperature Energy-Efficient Acid Gas Removal Process	27
3. Implications of the Dual-Mode Sorption and Transport Models for Mixed Gas Permeation	47
4. Standard Reference Materials for Gas Transmission Measurements	75
5. Gas Transport and Cooperative Main-Chain Motions in Glassy Polymers	89
6. Sorption and Transport in Glassy Polymers: Gas-Polymer-Matrix Model	111
7. Membrane Gas Separations for Chemical Processes and Energy Applications	125
8. Gas-Adsorption Processes: State of the Art	145
9. Nonisothermal Gas Sorption Kinetics	171
10. Recovery and Purification of Light Gases by Pressure Swing Adsorption	195
11. Methane/Nitrogen Gas Separation over the Zeolite Clinoptilolite by the Selective Adsorption of Nitrogen	213
12. Separation of Methane from Hydrogen and Carbon Monoxide by an Absorption/Stripping Process	235
13. High-Temperature Hydrogen Sulfide Removal Using a Regenerable Iron Oxide Sorbent	255
Index	281
