

CONTENTS

1. Introduction	1
2. Morphology, coalescence, and size distribution of foam bubbles	7
3. Principles of foam fractionation and drainage	33
4. Ion flotation	53
5. Precipitate flotation	75
6. Principles of mineral flotation	92
7. Bubble fractionation	133
8. Solvent sublation	145
9. Foam separation of enzymes and other proteins	157
10. Foam fractionation of surfactants, orthophosphate, and phenol	175
11. Ion, colloid, and precipitate flotation of inorganic anions	183
12. Flotation of particulates: ferric oxide, bacteria active carbon, and clays	191
13. Removal and use of hydrolyzable metals in foam separations	199
14. Application of adsorptive bubble separation techniques to wastewater treatment	219
15. Separation of surfactants and metallic ions by foaming : studies in France	243
16. Separation of surfactants and metallic ions by foaming : studies in Israel	249
17. Separation of metallic ions by foaming: studies in Italy	265
18. Separation of particles, molecules, and ions by foaming: studies in Japan	273
19. Separation of surfactants and metallic ions by foaming: studies at radiation applications, inc., and oak ridge national laboratory, U.S.A.	279
20. Separation of surfactants and ions from solutions by foaming: studies in the U.S.S.R.	299
21. Author index	315
22. Subject index	323
