

CONTENTS

1. Introduction to solid – liquid separation	11
3. Efficiency of separation of particles from fluids	43
4. Coagulation and flocculation	74
5. Gravity thickening	132
6. Hydrocyclones	202
7. Separation by centrifugal sedimentation	251
8. Screening	279
9. Filtration fundamentals	311
10. Filter aids	338
11. Deep bed filtration	358
12. Pressure filtration Part I – batch pressure filtration	379
13. Vacuum filtration	415
14. Centrifugal filtration	476
15. Countercurrent washing of solids	533
16. Problems with fine particle recycling	541
17. Filter media, filter rating Lawrence	559
18. Methods for limiting cake growth	578
19. Flotation	519
20. The selection of solid – liquid separation equipment	614
21. Membrane separation	628
22. High gradient magnetic separation	661
23. Particle – fluid interaction, thermodynamics of solid – liquid separation	
Part I- particle – fluid interaction	685
Part II – thermodynamics of solid – liquid separation	697
24. Index	705
