

CONTENTS

Introduction	1
Membranes and Permeation	1
Engineering Applications of Membranes	6
Biological	9
1. Historical	10
Early Dialyzers	10
Membranes	14
Imbibition	16
Nitrocellulose	16
Permselectivity	17
Osmotic Pressure	20
Effect of Electrolytes	23
Protective Coatings	23
Cathodic Protection	30
Electrolytic Resistance of Coatings	31
Experimental Measurement of Liquid Diffusion Rates	34
Symbols	37
2. Diffusion in Liquids	38
Fick's Law	38
Physical Significance of Diffusivity	41
Theory of Absolute Rates	42
Application and Limitations of Theory	46
Diffusion of Large Molecules	52
Solutes of Medium Molecular Size	55
Hydronium and Hydroxyl Ions	57
Correlation of Viscosity with Diffusivity for Solutions of Electrolytes	58
Symbols	60

3. Experimental Methods	62
Colloids	62
Theory of Methods of Layering	65
Fractional Sampling Diffusiometer	65
Capillary Tube Method	66
Optical Methods	68
Diffusion Cell Design	69
Glass Diaphragm Method	73
Conductometric Methods	74
Methods Employing Unsteady State Diffusion	75
Symbols	76
4. Electrolytes	77
Relation of diffusion to Conductance	77
Concentration Dependence of Electrolyte Diffusivity	82
Diffusivity in Concentrated Solutions	85
Hittorf Method of Measurement of Transference Numbers	86
Moving Boundary Method	87
Hydration	88
Symbols	90
5. Experimental Results	91
Diffusion in a Supporting Electrolyte	91
Polarography	93
Amino Acids, Peptides, Proteins, Saccharides	95
Strong Electrolytes—Self-Diffusion	103
Strong Electrolytes, Concentrated Solutions	105
Diffusion of Sucrose	111
Relation to Membranes	114
Voltammetric Membrane Electrodes	115
Measurement of Electrolyte Diffusion through Membranes	
By Amperometric Methods	116

Bi-ionic Potentials	120
Semi-Empirical Relations	122
6. Interior Effects Mixed Electrolytes	124
Solutions Containing a Single Electrolyte	124
Complex Systems	125
Application to Membranes	131
Symbols	136
7. Thermodynamics of Membranes	137
Review	137
Non-Selective Membranes	138
Ion-Selective Membranes	140
Osmotic pressure	144
Donnon Membrane Equilibria	148
Osmotic Water Transport	149
Symbols	151
8. Structure and Properties of Membranes	152
Structure	152
Segmental Diffusion	153
Imbibition	156
Osmotic Transfer of Solvent	158
Streaming Potential	161
Electroosmotic Flow	162
Application to Membranes	163
Irreversible Thermodynamics of Membranes	166
Symbols	169
9. Diffusion within Membranes	170
Diffusion within Synthetic Polymers	170
Diffusion through Agar and Gelatin Jellies	175
Permselectivity	176
Diffusivity and Solubility in Membranes	177

Membrane Structural Factors in Electromosis	178
10. Cellulose Membranes	180
Nature of Cellulose	180
Cellophane	183
Degradation	186
Ion Selectivity	189
Parchmentized Kraft Paper	191
Denitrated Nitrocellulose	191
Properties of Regenerated Cellulose	192
Swelling of Commercial Films	194
Interaction of Ions with Cellulosic Membranes	196
Cellulose Acetate Membranes	197
Modified Cellulosic Membranes	198
11. Synthetic Resin Membranes	
Advantages over Cellulose	200
Phenol-Formaldehyde Cation-Exchange Resins	201
Anion-Exchange Membranes	205
Non-Selective Semipermeable Membranes	206
Separators for Storage Batteries	213
12. Permeation of Membranes by Gases and Vapors	215
Introduction	215
Effects of Molecular Size and Shape	216
Effect of Composition	219
Effect of Gas Composition	219
Effects of Crystallinity	224
Effect of Temperature	226
Effects of Pressure on P, D and S	226
Transport of Laminates	230
Units and Conversion Factors	231
Methods of Measurement	232

Selectivity of Plastic Membranes	234
13. Electrodialysis	237
Principles	237
Multicell Stacks	240
Membrane Polarization	243
Water Reclamation from Brackish Sources	245
Pilot Plant Field Studies	257
Electrodialyzer Construction	260
Miscellaneous Uses of Electrodialysis	264
Practical Aspects of Electrodialysis	266
Design of commercial Electrodialyzers	267
Standards of Construction and Performance	269
Ionics, Inc., Electrodialyzers	273
Electrodes and End Cells	276
Cooling	276
Central Technical Institute (T.N.O) Electrodialyzer	276
Orange Free State Brackish Water	277
Extrapolation of Costs to Large-Scale Operation	278
Comparison with other Processes	279
Practical Measures to Alleviate Difficulties	280
Operating Costs of Commercial Units	280
Osmionic Process	286
14. Industrial Dialyzers	287
Factors Affecting Transfer Rates	296
Principles of Commercial Dialysis	296
Factors Contributing to Transfer Resistance	303
Laboratory Evaluation	307
Dialysis of Acids	312
Dialysis of Caustic Solutions	314
Historical Development, Dialysis of Acid Liquors	319

Dialysis as a Means of Separation of Complex Mistures	320
15. Dialysis in Electrolytic Copper Refining	324
16. Miscellaneous Applications of Membranes	333
Ultrafiltration	333
Reverse Osmosis	341
Liquid Permeation Separation	342
Fuel Cells	343
17. Natural Membranes	345
Introduction	345
The Generalized Cell	346
Membranes of Bacterial Cells	347
Evidence for the Existence of a Plasma Membrane in Bacterial Cells	348
Composition of the Bacterial Plasma Membrane	350
Passage of Materials through the Plasma Membrane of Bacteria by Diffusion	351
Plasma Membranes of Plant Cells other than Bacteria	353
Movement of Ions and Compounds out of Cells	357
Membranes of Animal Cells	358
Transport Mechanisms	362
Appendix	369
Index	401
