

CONTENTS

I. GROWTH AND REGULATION AS A BASIS FOR OBTAINING MICROBIAL METABOLITES	
Enzyme Production by Bacteria	3
The Regulation of Enzyme Activity in a Branch Biosynthetic Pathway	15
II. THE CULTURE: SELECTION DEVELOPMENT, AND MAINTENANCE	
Automation in Screening	31
Some Fundamental Problems of Continuous L-Glutamic Acid Fermentations	43
Metabolic and Taxonomic Considerations of Selected Higher Fungi	63
Applications of Microbial Genetics to Industrial Fermentations	89
III. MICROBIAL BIOSYNTHESIS: METABOLIC AND ENVIRONMENTAL CONTROL	
Responses of Bacteria to Dissolved Oxygen Tension	117
The Influence of Different Energy Sources on Bacterial Growth and Synthesis	145
Temperature Control of Growth and Metabolic Activity	157
Metabolic Controls of Accumulation of Amino Acids and Nucleotides	177
Regulation of Mannosidase, an Enzyme of Streptomycin Biosynthesis	199
IV. ISOLATION AND PURIFICATION OF MICROBIAL METABOLITES	
Isolation of Intracellular Enzymes from Micro-organisms – the Development of a Continuous Process	225
Disintegration of Cells	249
Separation Techniques for the Recovery of Materials from Aqueous Solutions	273
V. DYNAMIC ASPECTS OF FERMENTATION	
Kinetics of Products Formation in Multi-Stage Continuous Culture	301
Dynamics of Coliphage Infections	323
Kinetics of Derepression and Synthesis of Hydrolase	337
A Molecular Basis for the Dynamic Properties of Microbial Cells	369
VI. ENZYMATIC SYNTHESIS: WHAT ARE ITS PROBLEMS AND FUTURE?	
The Use of Biocatalysis in the Synthesis and Transformation of Steroids	385
Use of Water-insoluble Enzyme Derivatives in Synthesis and Separation	391

VII. NOVEL APPROACHES TO DESIGN AND OPERATION OF FERMENTATION SYSTEMS	
Recent Theoretical and Practical Trends in Continuous Cultivation	427
Automatic Control and Optimization of Fermentation Processes: Glutamic Acid	441
Reactor Systems for Processes With Extreme Gas-Liquid Transfer Requirements	465
VIII. NOVEL MICROBIAL PRODUCTS BY DE NOVO SYNTHESIS	
Monensin, a new Biologically Active Compound Produced by a Fermentation Process	517
Microbial Formation of Tartaric Acid from Glucose	541
Streptomyces Glucose Isomerase	561
Microbial Insecticides as Fermentation Products	591
Heterokaryosis of Alkaloid Producing Strains of <i>Claviceps purpurea</i> in Saprophytic and Parasitic Conditions	611
IX. NOVEL MICROBIAL PRODUCTS BY TRANSFORMATION PROCESSES	
Microbial Transformations of Naturally Occurring Polymers	631
Microbial Transformations of Alkanes	635
Microbial Transformations of Aromatic Compounds	649
Microbiological Transformation of Terpenes ³	689
Microbial Transformation of Alkaloids	715
X. NOVEL ENERGY SOURCES FOR FERMENTATION PROCESSES	
<i>Thiobacillus ferrooxidans</i> and Its Relation to the Solubilization of Ores of Copper and Iron	747
Production of Ribonucleic Acids from n-Paraffins	773
Microbial Conversion of p-Xylene in Stirred Fermenters	789
From Electricity via Water Electrolysis to Food	807
Microbial Cell Yields from Various Hydrocarbons	833
Economical Importance of Sulfate-Reducing Bacteria	843
XI. FERMENTATION ACTIVITY OF THE FUTURE	
Ferment of Perish: Future Role of Applied Microbiology in World Affairs	861
Fermentation in the Years Ahead	883
SUBJECT INDEX	905
