

CONTENTS

1. Introduction	1
2. The Yeasts	10
3. The Propagation of Yeast	60
4. The Production of Industrial Alcohol by Fermentation	102
5. Facts and Theories Concerning the Mechanism of Ethyl Alcohol Fermentation	128
6. Brewing	148
7. Wine	174
8. The Glycerol Fermentation	195
9. The Glycerol Fermentation	208
10. Vitamin Production by Yeasts and Yeast-like Microorganisms	218
11. Yeast Enzymes and Minor Products	236
12. The Bacteria	247
13. The Acetone-Butanol Fermentation	250
14. The Butanol-Isopropanol Fermentation	285
15. the Acetone-Ethanol Fermentation	295
16. The Lactic Acid Bacteria	299
17. The Production of Lactic Acid by Fermentation	304
18. Sauerkraut	332
19. Pickles	341
20. Dextrans	370
21. Cheese	393
22. The Production and Properties of 2,3-Butanediol	399
23. The Acetic Acid Bacteria and Some of Their Biochemical Activities	428
24. The Propionic Acid Fermentation	474
25. The Production of Vitamin B ₁₂	482
26. Some Minor Bacterial Activities with Industrial Implications	497
27. The Molds	515
28. The Citric Acid Fermentation	533
29. The Gluconic Acid Fermentation	578
30. The Itaconic Acid Fermentation	598
31. The Kojic Acid Fermentation	609
32. Gibberellic Acid and the Gibberellins	619
33. The Fumaric Acid Fermentation	625
34. The Production of Lactic Acid by Molds	630
35. The Gallic Acid Fermentation	637
36. Ustilagic Acid	639

37. Some Other Acids Produced by Molds	642
38. Mannitol Production by Molds	644
39. Production of Mushroom Mycelium by the Submerged culture Process	647
40. The Production of Fat by Molds	654
41. Mold Enzyme Preparations: Uses and Products	666
42. Some Minor Chemical Activities of the Lower Fungi	683
43. The Production of Amino Acids by Microorganisms	710
44. The Microbiological Transformation of Steroids	723
45. Antibiotics	762
46. Saccharifying Agents: Methods of Production and Uses	836
47. Some Biochemical Engineering Aspects of Fermentation	886
Index	901
