

CONTENTS

1. Processing Cell Lysate with Tangential Flow Filtration	1
2. Application, Sterilization, and Decontamination of Ultrafiltration Systems for Large-Scale Production of Biologicals	21
3. Practical Aspects of Tangential Flow Filtration in Cell Separations	51
4. Preparative Reversed Phase High Performance Liquid Chromatography: A Recovery and Purification Process for Nonextractable Polar Antibiotics	71
5. Process Scale Chromatography: The New Frontier in High Performance Liquid Chromatography	91
6. Immunosorbent Chromatography for Recovery of Protein Products	105
7. A Rational Approach to the Scale-up of Affinity Chromatography	113
8. Design of a New Affinity Adsorbent for Biochemical Product Recovery	123
9. Process Developments in the Isolation of Largonycin F-II, a Chromoprotein Antitumor Antibiotic	133
10. Approaches to Cephalosporin C Purification from Fermentation Broth	155
11. Extraction of Insulin-Related Materials and Other Peptide Hormones from <i>Tetrahymena pyriformis</i>	175
Author Index	193
Subject Index	193
