

## CONTENTS

|  |     |
|--|-----|
| 1. Elements of Industrial Stoichiometry          | 1   |
| 2. Fluid Films                                   | 34  |
| 3. Flow of fluids                                | 40  |
| 4. Flow of Heat                                  | 100 |
| 5. Fuels and Power                               | 168 |
| 6. Combustion                                    | 173 |
| 7. Furnaces and Kilns                            | 187 |
| 8. Gas Producers                                 | 224 |
| 9. Crushing and Grinding                         | 251 |
| 10. Mechanical Separation                        | 289 |
| 11. Filtration                                   | 323 |
| 12. Basic Principles of Vaporization Processes   | 365 |
| 13. Evaporation                                  | 373 |
| 14. General Principles of Diffusional Processes  | 424 |
| 15. Absorption and Extraction                    | 462 |
| 16. Distillation                                 | 514 |
| 17. Humidity and Wet- and Dry – Bulb Thermometry | 577 |
| 18. Air Conditioning                             | 595 |
| 19. Drying                                       | 613 |
| 20. Index  | 721 |
