

CONTENTS

Preface	5
General Introduction	11
1 Micellization	13
1.1 Introduction	13
1.2 The micellization process	16
1.3 Physical properties of aqueous solutions of association colloids	19
1.4 Micellar structure	37
1.5 Micellar shape and solvation	46
1.6 Theories of micellization	48
1.7 Micellization in mom-aqueous solvents	53
References	56
2 Solubilization	61
2.1 Introduction	61
2.2 Experimental methods of studying solubilization	62
2.3 Factors influencing solubilization	78
2.4 Co-micellization	100
2.5 Hydrotrophy	101
2.6 Solubilization in mom-aqueous solutions	103
2.7 Solubilize-surfactant-solvent ternary systems	104
References	112
3 Solubilization and its pharmaceutical applications	117
3.1 Introduction	117
3.2 Bactericidal compounds	118
3.3 Steroids	135
3.4 Fat-soluble vitamins	143
3.5 Antibiotics and sulphonamides	151
3.6 Analgesics and barbiturates	162
3.7 Oils	166
3.8 Effect of solubilizers on the compatibility of medicaments	168
3.9 Hydrotrophy in pharmaceutical systems	170
References	180

4	Some consequences of solubilization in pharmaceutical systems	187
4.1	Effects of surface-active agents on drug activity and absorption	187
4.2	Drugs as colloidal electrolytes and solubilizers	205
4.3	The interaction of solubilizers and preservatives	208
4.4	Stability and reactivity in solubilized systems	217
	References	225
5	Further applications of solubilization	230
5.1	Solubilization of cosmetic materials	230
5.2	Solubilization and insecticide and herbicide formulation and activity	235
5.3	Effect of solubilizers on the extraction of crude drugs	241
	References	246
6	Biological aspects of solubilization	248
6.1	Effect of solubilizing agents on cell membranes	248
6.2	Phospholipid micelles and solubilization in vivo	251
6.3	The solubilization of cholesterol and its significance	256
6.4	The role of solubilization in drug absorption and fat utilization	260
6.5	Ternary and quaternary systems of lecithin, cholesterol, and bile salts	268
6.6	The solubilization of carcinogens	270
6.7	Uses of solubilizers in biochemical research	273
	References	281
7	Some chemical and industrial applications	286
7.1	Reactions in solubilized systems	286
7.2	Emulsion polymerization and solubilization	292
7.3	Detergency and solubilization	294
7.4	The utilization of surfactants in dyeing and textile processing	300
7.5	Effect of surfactants in analytical procedures	305
	References	311
	Appendix	314
	Index	323
