

CONTENTS

<i>Introduction</i>	1
1. Methods of Measurement	3
1.1 Steady-state Techniques	4
1.2 Non-steady-state Techniques	9
1.3 Eliminating IR Drop	16
<i>Electrochemical Transport Processes</i>	25
2. Mass Transport	29
2.1 Mass Transport to the Rotating Disc	38
2.2 Mass Transport to a Flat Plate in an Infinite Solution and in a Flow Channel	43
2.3 Mass Transport in Three-dimensional Electrodes	50
3. Charge Transport	53
3.1 Current Distribution	54
3.2 Similarity Theory and Current Distribution	66
4. Heat Transfer	75
Electrochemical Reaction Engineering	91
5. Electrochemical Thermodynamics and Electrode Kinetics	93
5.1 Electrochemical Thermodynamics	93
5.2 Electrode Kinetics	98
6. Kinetics in Electrochemical Reactors	117
6.1 Electrochemical Batch Reactor	122
6.2 Cells with Packed and Fluidized Bed Electrodes	127
6.3 Multiple Parallel Plate Cell Units	136
7. Separation Systems in Electrochemical Cells	143
7.1 Mechanical Separators (Diaphragms)	144
7.2 Ion Exchange Membranes	154

8. Optimization and Factorial Design of Experiments	161
8.1 Optimum Operating Temperature for an Electrochemical Conversion	163
8.2 Factorial Design of Experiments	169
9. Materials and Corrosion	177
9.1 Corrosion in Electrolysis Plant and their Components	178
9.3 Principles of Corrosion Prevention	180
10. Experimental Modelling of Industrial Processes	189
10.1 Chlor-alkali Electrolysis	189
10.2 Methanol-air Fuel Cell	198
10.3 Organic Electrosynthesis	202
10.4 Effluent Treatment by Means of a Packed Bed Cell	206
Appendix	211
A1. Definitions of Electrochemical and Engineering Terms	211
A2. Problems	221
A3. Results and Discussion of Experiment	239
<i>Index</i>	289
