

CONTENTS

1. Introduction to Zeolite Science and Technology	1
2. The Chemistry of Catalytic Processes	29
3. Preparation of Zeolite Catalysts	57
4. Refining Processes: Setting the Scene	75
5. Advances in Fluid Catalytic Cracking	105
6. Hydrocracking	131
7. C4-C6 Alkane Isomerization	153
8. Base Oil Production and Processing	167
9. Para-Xylene Manufacturing: Catalytic Reactions and Processes	189
10. Separation of Paraxylene by Adsorption	209
11. Aromatic Alkylation: Towards Cleaner Processes	223
12. Methanol to Olefins (MTO) and Beyond	239
13. Zeolite Effects on Catalytic Transformations of Fine Chemicals	261
14. Functionalization of Aromatics over Zeolite Catalysts	281
15. Zeolites and “Non Zeolitic” Molecular Sieves in the Synthesis of Fragrances and Flavors	301
16. Pollution Abatement Using Zeolites: State of the Art and Further Needs	345
Subject Index	375
