

## **CONTENTS**

1. Biocatalysis and Biomimetics: New Options for Chemistry	1
2. Biomedical Science and Technology: The Interdisciplinary Challenge	6
3. Interdisciplinary Challenges: Control of Angiogenesis	19

### **STRUCTURE-FUNCTION RELATIONSHIPS**

4. Crystallography and Site-Directed Mutagenesis of Two Isomerases	34
5. Computer-Automated Sequence Evaluation of Peptides: Application to the Study of Snake Venom Toxicity	52
6. Application of Simulation and Theory to Biocatalysis and Biomimetics	65

### **WATER-RESTRICTED MEDIA**

7. Enzymatic Reactions in Reversed Micelles at Low Solubilized Water Concentrations	90
8. Enzyme Structure and Function in Water-Restricted Environments: Electron Paramagnetic Resonance Studies in Organic Solvents and Reverse Micelles	104

### **BIOMIMETICS**

9. Hydroxylation of C <sub>2</sub> , C <sub>3</sub> , and Cyclo-C <sub>6</sub> Hydrocarbons by Manganese Porphyrin and Nonporphyrin Catalysts	116
10. Biominetic Catalytic Oxidation of Lignin Model Compounds	123
11. Zeolite Catalysts as Enzyme Mimics: Toward Silicon-Based Life?	141
12. Immobilization of Proteins and Enzymes onto Functionalized Polypropylene Surfaces by a Gaseous Plasma Modification Technique	155

## **INDEX**

Author Index	164
Affiliation Index	164
Subject Index	164
