

CONTENTS

1	Colloids, Phases, Interfaces	1
1.1	General Remarks	1
1.2	Physical Behavior of Atoms and Molecules inside Phase and at Interfaces and Surfaces	2
1.3	Some Essential Concepts in Colloid Chemistry	10
1.4	Intermolecular Binding Forces	16
1.5	The Liquid – Gas and Liquid – Liquid Interface	21
1.6	Cohesion, Adhesion, and Spreading	34
1.7	The Solid-Liquid Interface	38
1.8	Association Colloids, Basic and Secondary Structures	46
2	Emulsions – Properties and Production	59
2.1	General Remarks	59
2.2	Formulation of Emulsions	15
2.3	Stabilization by Solid Particles	20
2.4	Phenomenology of Emulsions	22
2.5	Stability of Emulsions	22
2.6	Rate-Determining Factors in Coalescence	23
2.7	Inversion of Emulsions	27
2.8	Emulsification Techniques	29
2.9	Some Important Consequences of Theory of Emulsion Stability	37
3	Microemulsions, Vesicles, and Liposomes	105
3.1	Microemulsions	105
3.2	Vesicles and Liquids	112
4	Foam	123
4.1	General Remarks	123
4.2	Foam Stabilization	125
4.3	Forces in Thin Films	126
4.4	Foaming Agents	128
4.5	Foam Stabilizers	129
4.6	Antifoaming Additives	129

5	Manufacture and Properties of Colloidal Suspensions and Dispersion	131
5.1	The Dispersion Procedure; Definition	131
5.2	The First Step in the Dispersion Procedure: Wetting of the Powder	133
5.3	The Second Step in the Dispersion Procedure: Comminution and Distribution of the Particles in the Liquid	133
5.4	Special Methods of Dispersion	142
5.5	The Third Step in the Dispersion Procedure: Stabilization of the Dispersion	145
5.6	The Most Important Points for Formulation Chemists from the Theory of Colloid Stability	154
5.7	Flocculation or Coagulation of Suspensions	166
5.8	Formulation of Stable Dispersions	172
6	Solid Forms	181
6.1	Powders and Powder Mixtures	181
6.2	Agglomerates, Granules	190
6.3	Preparation and Properties of Instant Products	226
6.4	Microencapsulation	234
7	Rheology	247
7.1	Basic Principles	247
7.2	Viscosity of Dispersions and Emulsions	253
7.3	Viscosity of Polymer Melts and Solutions	257
7.4	Viscometers	259
8	Solubility Parameters, Log	265
8.1	Hildebrand Solubility Parameters	266
8.2	Multicomponent Solubility Parameter	267
8.3	Incremental Methods	272
8.4	Solvent Mixtures	275
8.5	Polymer Solutions	275
8.6	Application of Solubility Parameters	279
8.7	QSAR, Octanol/Water Distribution Coefficient	283
8.8	LSER	284
8.9	M Numbers	288
9	Solubility, Crystallization	295
9.1	General Remarks and Basic Principles	317
9.2	Fundamental Phenomena in Detergency	317
9.3	Special Phenomena in Detergency	317
10.4	Detergents Additives, Builders	323
10.5	Laundry Detergents	324

11	Cosmetics	327
11.1	Skin as the Substrate for Cosmetics	327
11.2	The Effects of Tensides on the Skin	329
11.3	Cosmetic Preparations	330
11.4	Emulsions in Cosmetics	331
11.5	Microemulsions and Liposomes in Cosmetics	337
11.6	Solutions	338
11.7	Bath and Shower Products	338
11.8	Gels	339
11.9	pencils and Sticks	340
11.10	Powders, Cream Powders	340
11.11	Oral and Dental Hygiene Products	341
11.12	Shaving Aids	343
11.13	Hair Cosmetics	344
11.14	Bases and Auxiliaries	348
12	Pharmaceutical Technology	351
12.1	Absorption of the Active Substance	351
12.2	General Remarks Active Substance	351
12.3	Drug Dosage Forms	358
12.4	Preservatives and Antioxidants	371
13	Food Formulations	375
13.1	Some Important Principles for the Formulation of Foodstuffs	375
13.2	Food Colloids	377
13.3	Proteins	377
13.4	Lipids	383
13.5	Polysaccharides	385
14	Agricultural Formulations	389
14.1	Formulations and Targets of Active Substances	389
14.2	Types of Formulation	392
14.3	Adjuvants	397
15	Pigments and Dyes	399
15.1	Solubility of Pigments and Dyes	399
15.2	Pigments	401
15.3	Dyes	413
	Index	421
