

CONTENTS

Chapter 1 INTRODUCTION	1
1.1 Physicochemical Hydrodynamics	1
1.2 Fluid and flow Approximations	2
1.3 particle and Pore Geometry	3
References	8
Chapter 2 TRANSPORT IN FLUIDS	9
2.1 Phenomenological Models	9
2.2 Viscosity and Momentum Transport	10
2.3 Thermal Conductivity and Heat Transport	17
2.4 Diffusivity and Mass Transport	21
2.5 Electrical Conductivity and Charge Transport	26
References	29
Problems	29
Chapter 3 EQUATIONS OF CHANGE	31
3.1 Isothermal	31
3.2 Nonisothermal	34
3.3 Multicomponent	37
3.4 Charged Species	41
3.5 Characteristic Parameters	45
References	50
Problems	50
Chapter 4 SOLUTIONS OF UNCHARGED MOLECULES	53
4.1 Diffusion and Reaction Kinetics	53
4.2 Convective Diffusion Layer Characteristics	59
4.3 Channel Flow with Soluble or Rapidly Reacting Walls	64
4.4 Reverse Osmosis and Mixed Heterogeneous Reactions	68
4.5 Flow Part a Reacting Flat Plate	78
4.6 Taylor Dispersion in a Capillary Tube	81
4.7 Gel Chromatography and Capillary Models of Porous Media	96
References	102
Problems	103

Chapter 5 SOLUTIONS OF UNCHARGED MACROMOLECULES AND PARTICLES	107
5.1 Microhydrodynamics of Macromolecules and Particles	107
5.2 Brownian Motion	114
5.3 Viscosity of Dilute Suspensions	121
5.4 Sedimentation under Gravity	129
5.5 Sedimentation in a Centrifugal Fields	141
5.6 Ultrafiltration	152
References	157
Problems	158
Chapter 6 SOLUTIONS OF ELECTROLYTES	161
6.1 The Electrolytic Cell	161
6.2 Electrodialysis	170
6.3 Ion Exchange	178
6.4 The Electric Double Layer and Electrokinetic Phenomena	185
6.5 Electroosmosis	191
References	198
Problems	199
Chapter 7 SOLUTIONS OF CHARGED MACROMOLECULES AND PARTICLES	201
7.1 The Charge of Macromolecules and Particles	201
7.2 Electrophoresis	204
7.3 Electrophoretic Separation	213
7.4 Sedimentation Potential and Streaming Potential	220
References	222
Problems	223
Chapter 8 SUSPENSION STABILITY AND PARTICLE CAPTURE	227
8.1 Colloid Stability	227
8.2 Brownian and Velocity Gradient Flocculation	236
8.3 Particle Capture by Brownian Diffusion and Interception	241
8.4 Particle Capture with Surface Forces	249
8.5 Filtration and Drag Models of Porous Media	257
References	263
Problems	264

Chapter 9 SURFACE TENSION	267
9.1 Physical of Surface Tension	267
9.2 Capillarity and Capillary Motion	276
9.3 Coating Flows	280
9.4 Surface Waves and Jet Breakup	289
9.5 Flows Driven by Surface Tension Gradients	300
References	314
Problems	315
 Appendixes	
A. SI Units and Physical Constants	319
B. Symbols	321
Author Index	333
Subject Index	337
