

CONTENTS

1. The Chemical Industry- What It is and What it Does	1
2. Basic Considerations – Envisioning the Process	25
3. Material Accounting – the Law of Conservation of Mass Really Works	40
4. Energy Accounting in Chemical Processes – the Law of Conservation of Energy Works Too	78
5. Chemical Transport – A Chemist ' s View of Fluid Flow	98
6. Heat Transfer – Which Why Does It Go?	135
7. Kinetics – Experimental Data, Rate Constants, and Reactor Design	163
8. Separation Processes – Isolating the Product	209
9. Instrumentation – Controlling the Process	230
10. Further Considerations – Developing the Process	260
11. Chemical Patents – What, How, and Why	290
12. Economics – Financial Analysis of the Process	316
13. Research – Where Are We Going?	346
14. Development of a Process – The Manufacture of Urea, A a Case Study	363
15. Index	409
