1. Effective Dispersion Equations for Reactive Flows with Dominant Péclet and Damkohler Numbers

C.J. van Duijn, Andro Mikelić, I.S. Pop and Carole Rosier

1. Introduction	
2. Non-Dimensional Form of the Problem and Statement of the Results	
3. Derivation of the Effective Models in the Non-Dimensional Form	11
4. Numerical Tests	24
5. Conclusions and Perspectives	35
Acknowledgements	44
References	44

2. Overall Reaction Rate Equation of Single-Route Complex Catalytic Reaction in Terms of Hypergeometric Series **47**

Mark Z. Lazman and Gregory S. Yablonsky

1. Introduction	49
2. Rigorous Analysis of Complex Kinetic Models: Non-Linear Reaction Mechanisms	57
3. Reaction Rate Approximations	69
4. Discussion and Conclusions	86
References	89
Appendix 1. Reaction Overall Rate Equations for Linear Mechanisms	91
Appendix 2. Computer Generated "Brackets" for 4th Degree Polynomial	92
Appendix 3. Proof of Proposition 3	95
Appendix 4. Thermodynamic Branch is Feasible	98
Appendix 5. Sturfels Series Coincides with the Birkeland Series for the Case of "Thermodynamic Branch"	100

3. Dynamic and Static Limitation in Multiscale Reaction Networks, Revisited	103
A.N. Gorban and O. Radulescu	
1. Introduction	105
2. Static and Dynamic Limitation in a Linear Chain and a Simple Catalytic Cycle	111
3. Multiscale Ensembles and Finite-Additive Distributions	123
4. Relaxation of Multiscale Networks and Hierarchy of Auxiliary Discrete Dynamical Systems	127
5. The Reversible Triangle of Reactions: The Simple Example Case Study	148
6. Three Zero-One Laws and Nonequilibrium Phase Transitions in Multiscale Systems	155
7. Limitation in Modular Structure and Solvable Modules	160
8. Conclusion: Concept of Limit Simplification in Multiscale Systems	164
Acknowledgement	166
References	167
Appendix 1. Estimates of Eigenvectors for Diagonally Dominant Matrices with Diagonal Gap Condition	168
Appendix 2. Time Separation and Averaging in Cycles	170
4. Multiscale Theorems	175
Liqiu Wang, Mingtian Xu and Xiaohao Wei	
1. Introduction	177
2. Derivatives	209
3. Indicator Functions	228
4. Integration Theorems	260
5. Averaging Theorems	318
6. Applications in Transport-Phenomena Modeling and Scaling	393
7. Concluding Remarks	444
Nomenclature	447
Acknowledgements	451
References	451
Subject Index	469
Contents of Volumes in this Serial	475
See Color Plate Section at the End of this Book

1. Engineering Materials from the Bottom Up – Overview	
Rudy J. Koopmans and Anton P.J. Middelberg	
1. Introduction	1
2. Historical Context	2
3. Self-Assembling Peptide Literature	4
4. A Future of Challenges and Opportunities	7
References	8
2. Mechanisms and Principles of 1D Self-Assembly of Peptides into β-Sheet Tapes	11
Robert P.W. Davies, Amalia Aggeli, Neville Boden, Tom C.B. McLeish, Irena A. Nyrkova and Alexander N. Semenov	
1. Introduction	12
2. Model of Hierarchical Self-Assembling Chiral Rods in Solution	13
3. Responsiveness to External Triggers	25
4. Peptide Self-Assembly on Surfaces	37
5. Conclusions and Future Prospects	39
References	40
3. Nucleation and Co-Operativity in Supramolecular Polymers	45
Paul van der Schoot	
1. Introduction	45
2. Nucleated Assembly	51
3. Kinetics of Nucleated Assembly	55
4. Co-Operativity and Nucleation	61
5. Coarse Graining Reversed	66
6. Summary and Outlook	70
Acknowledgement	72
References	72
4. Recombinant Production of Self-Assembling Peptides	79
Michael J. McPherson, Kier James, Stuart Kyle, Stephen Parsons and Jessica Riley	
1. Introduction	80
2. Recombinant Protein Production	80

3.	Host Organisms for Recombinant Expression	87
4.	Repetitive and Self-Assembling Proteins and Peptides in Nature	97
5.	Recombinant Peptide Production	100
6.	Recombinant Expression of Self-Assembling Peptides	108
7.	Perspective	113
	Acknowledgments	113
	References	113
5.	Inspiration from Natural Silks and Their Proteins	119
	Boxun Leng, Lei Huang and Zhengzhong Shao	
1.	Introduction	119
2.	Structure and Properties of Proteins and Silks	120
3.	Artificial Spinning of Silk Fibroin	133
4.	Bioapplication of Silk Fibroin	142
5.	Biominerallization Regulated by Silk Proteins	144
6.	Conclusion and Perspective	148
	Acknowledgment	148
	References	148
6.	Surface- and Solution-Based Assembly of Amyloid Fibrils for Biomedical and Nanotechnology Applications	161
	Sally L. Gras	
1.	Introduction	161
2.	Polypeptide Self-Assembly	162
3.	The Role of Surfaces During and After Assembly	167
4.	Applications	189
5.	Conclusion	205
	References	206
7.	Hybrid Systems Engineering: Polymer–Peptide Conjugates	211
	Conan J. Fee	
1.	Introduction	211
2.	Peptide–Polymer Conjugation	213
3.	Peptide-Directed Formation of Gels	214
4.	Cyclopeptide Nanotubes	215
5.	Polyelectrolytic and Organometallic Polymer–Peptide Conjugates	216
6.	β -Sheet Suprastructures	217
7.	Rod–Coil Conformations	218
8.	Physical Manipulation of Nanostructural Orientation	220
9.	Conclusions	220
	References	221
	Subject Index	223
	Contents of Volumes in this Serial

1 Determination of Photoadsorption Capacity of Polychrystalline TiO₂ Catalyst in Irradiated Slurry	
Vincenzo Augugliaro, Sedat Yurdakal, Vittorio Loddo, Giovanni Palmisano and Leonardo Palmisano	
1. Introduction	2
2. Experimental	5
3. TiO ₂ Surface Modifications Under Irradiation	8
4. Photoadsorption Determination	10
5. Results	18
6. Discussion	21
7. Conclusions	28
Appendices	29
List of Symbols	33
References	33
2. Treatment of Chromium, Mercury, Lead, Uranium, and Arsenic in Water by Heterogeneous Photocatalysis	37
Marta I. Litter	
1. Introduction	37
2. Thermodynamical Considerations and Mechanistic Pathways	41
3. Chromium	44
4. Mercury	49
5. Lead	53
6. Uranium	57
7. Arsenic	58
8. Conclusions	61
Acknowledgment	62
References	62

5. Conclusions and Perspectives	222
Acknowledgments	223
List of Symbols	223
Abbreviations	225
References	225
7. Scaling-Up of Photoreactors: Applications to Advanced Oxidation Processes	229
Orlando M. Alfano and Alberto E. Cassano	
1. Introduction	230
2. Scaling-Up of a Photocatalytic Wall Reactor with Radiation Absorption and Reflection	234
3. Scaling-Up of a Homogeneous Photochemical Reactor with Radiation Absorption	250
4. Scaling-Up of a Heterogeneous Photocatalytic Reactor with Radiation Absorption and Scattering	263
5. Conclusions	282
Acknowledgments	283
Notation	283
References	286
8. Photocatalytic Treatment of Air: From Basic Aspects to Reactors	289
Yaron Paz	
1. Introduction	290
2. Types of Air-Treatment Applications	293
3. Basic Aspects of Photocatalysis for Air Treatment	296
4. Types of Target Pollutants	303
5. Photocatalytic Reactors for Air Treatment: Modes of Operation	310
6. Types of Photocatalytic Reactors for Air Treatment	312
7. Current Problems and Future Trends	329
8. Concluding Remarks	331
Acknowledgment	331
List of Symbols	331
Abbreviations	332
References	333
Index	337
Contents of Volumes in this Serial	353

<i>Preface</i>	ix
1. Ultrasound-Based Gas–Liquid Interface Detection in Gas–Liquid Two-Phase Flows	1
S. Roberto Gonzalez A, Yuichi Murai and Yasushi Takeda	
1. Introduction	2
2. Gas–Liquid Interface Inferred from Liquid Velocity	4
3. Gas–Liquid Interface Inferred from the Peak Ultrasound Echo Intensity	11
4. Summary	24
List of Symbols	25
Acknowledgments	26
References	27
2. Micromanipulation in Mechanical Characterisation of Single Particles	29
Z. Zhang, J.D. Stenson and C.R. Thomas	
1. Introduction	30
2. Description of the Techniques	31
3. Status and Applications	51
4. Other Applications	68
5. Perspectives on Future Development	77
Nomenclature	78
Acknowledgements	81
References	81
3. Particle Image Velocimetry Techniques and its Applications in Multiphase Systems	87
Feng-Chen Li and Koichi Hishida	
1. Introduction	88
2. Fundamentals of Particle Image Velocimetry	90
3. Various Types of Particle Image Velocimetry	103

4. Measurement of Multiphase Flow Using Particle Image Velocimetry	118
5. Summary and Outlook	140
Notation	141
References	142

4. Positron Emission Imaging in Chemical Engineering **149**

J.P.K. Seville, A. Ingram, X. Fan and D.J. Parker

1. Introduction	150
2. Positron Emission Techniques and their Recent Development	151
3. Applications	156
4. Portable PEPT	168
5. Summary and Future Plans	174
Symbols and Abbreviations	176
Acknowledgements	177
References	177

5. Electrical Capacitance, Electrical Resistance, and Positron Emission Tomography Techniques and their Applications in Multi-Phase Flow Systems **179**

Fei Wang, Qussai Marashdeh, Liang-Shih Fan and Richard A. Williams

1. Introduction	180
2. Electrical Capacitance Tomography	182
3. Electrical Resistance Tomography	196
4. Positron Emission Tomography	209
5. Concluding Remarks	216
Nomenclature	216
References	217

6. Time-Resolved Laser-Induced Incandescence **223**

Alfred Leipertz and Roland Sommer

1. Introduction	224
2. Measurement Principle	225
3. Flame Investigations	236
4. Technical Applications	237
5. Conclusions	265
Nomenclature	267
Acknowledgements	267
References	268

Subject Index **271**

Contents of Volumes in this Serial **279**

See Color Plate Section at the End of this Book

CONTENTS

<i>Contributors</i>	vii
<i>Preface</i>	ix
1. Microunit Operations and Continuous Flow Chemical Processing	1
Arata Aota and Takehiko Kitamori	
1. Introduction	2
2. Design and Construction Methodology for Integration of Microchemical Systems	4
3. Surface Chemistry for Multiphase Microflows	14
4. Discussion and Conclusions	33
List of Symbols	33
References	34
2. Microreactors with Electrical Fields	37
Anil Ağiral and Han J.G.E. Gardeniers	
1. Introduction	38
2. Microplasma Reactors	41
3. Electrochemical Microreactors	67
4. Electrokinetic Control of Chemical Reactions	72
5. Electronic Control of Reactions at Surfaces	85
6. Conclusion	95
Acknowledgments	96
References	96
3. High-Throughput Organic Synthesis in Microreactors	103
Charlotte Wiles and Paul Watts	
1. Introduction	104
2. The Use of Microreactors for High-Throughput Organic Synthesis	105
3. Compounds of Interest and Industrial Applications of Microreaction Technology	174
4. Conclusions	191
References	191

4. Microfluidic Reactors for Nanomaterial Synthesis	195
S. Krishnadasan, A. Yashina, A.J. deMello and J.C. deMello	
1. Introduction	196
2. Microfluidic Routes to the Synthesis of Nanoparticles	197
3. The Automated Production of CdSe Nanoparticles	208
4. The Automated Production of Nanoparticles	211
5. Process Control	222
6. The Application of Automated Microreactors in Nanotoxicology	224
7. Conclusions	228
Acknowledgement	229
References	229
Subject Index	233
Contents of Volumes in this Serial	245

<i>Contributors</i>	vii
<i>Preface</i>	ix
1. Equilibrium Thermodynamic Modeling of Dissipative Macroscopic Systems	1
B.M. Kaganovich, A.V. Keiko, and V.A. Shamansky	
1. Introduction	2
2. Substantiation of the Equilibrium Thermodynamics Capabilities for Describing Irreversible Processes	5
3. Models of Extreme Intermediate States	17
4. Comparison of MEIS with the Models of Nonequilibrium Thermodynamics	38
5. Examples of MEIS Application	50
6. Conclusion: What we have and what will be?	66
7. Problems of Equilibrium Thermodynamic Descriptions of Macroscopic Nonconservative Systems	69
Acknowledgments	72
References	72
2. Multiscale Equilibrium and Nonequilibrium Thermodynamics in Chemical Engineering	75
Miroslav Grmela	
1. Introduction	76
2. Multiscale Equilibrium Thermodynamics	78
3. Multiscale Nonequilibrium Thermodynamics	91
4. Multiscale Nonequilibrium Thermodynamics of Driven Systems	116
5. Concluding Remarks	127
Acknowledgment	128
References	128

3. Application of Mesoscale Field-Based Models to Predict Stability of Particle Dispersions in Polymer Melts	131
Prasanna K. Jog, Valeriy V. Ginzburg, Rakesh Srivastava, Jeffrey D. Weinhold, Shekhar Jain, and Walter G. Chapman	
1. Introduction	132
2. Theory	135
3. Applications	146
4. Summary and Outlook	161
Acknowledgment	162
References	162
4. Principles of Statistical Chemistry as Applied to Kinetic Modeling of Polymer-Obtaining Processes	165
Semion Kuchanov	
1. Introduction	166
2. Main Peculiarities of the Description of Polymers	168
3. Specificity of the Description of Branched Polymers	173
4. Kinetic Models of Macromolecular Reactions	175
5. Methods of Calculations	177
6. Some General Theoretical Results	182
7. Effect of Hydrodynamic Stirring in a Reactor on Some Service Properties of Polymer Products	188
Acknowledgments	197
References	197
Subject Index	201
Contents of Volumes in this Serial	211

<i>Contributors</i>	<i>vii</i>
<i>Preface</i>	<i>ix</i>
1. Meso-Scale Modeling—The Key to Multi-Scale CFD Simulation	1
Wei Wang, Wei Ge, Ning Yang and Jinghai Li	
1. Meso-Scale Structure—A Common Challenge for Chemical Engineering	2
2. Multi-Scale CFD-Solutions for High Predictability and Scalability	10
3. Meso-Scale Modeling-The Key to Multi-Scale Approaches	24
4. Industrial Applications	43
5. Summary	51
Acknowledgments	54
References	54
2. The Holistic Strategy in Multi-Scale Modeling	59
Pil Seung Chung, Myung S. Jhon, Lorenz T. Biegler	
1. Introduction	60
2. Illustration via Benchmark Examples	63
3. Structure of Hierarchical Equations	74
4. System Integration	84
5. Technological Applications: PEFC	92
6. Technological Applications: Hard Disk Drive	103
7. Summary and Conclusions	112
Acknowledgment	114
References	114
3. Industrial Applications of Plant-Wide Equation-Oriented Process Modeling-2010	119
Milo D. Meixell, Jr., Boyd Gochenour, and Chau-Chyun Chen	
1. Introduction	120
2. Sequential Modular Solution Techniques Versus Simultaneous Solution Techniques	123

3. Modeling Objectives	124
4. Model Variables	124
5. Simulation	125
6. Parameter Estimation and Reconciliation	126
7. Optimization	127
8. Summary of Simulate/Optimize/Parameter/Reconcile Cases	128
9. Model Scope	130
10. Model Fidelity	130
11. Embedded Solution Strategies	131
12. Process Economics	132
13. Offline and Online Usage	132
14. Model Maintenance	133
15. Examples of Industrial Applications	134
16. CO ₂ Capture with Aqueous Alkanolamine Solution	136
17. Modeling CO ₂ and Absorbent Physical Properties and Chemical Reactions	137
18. Modeling CO ₂ Capture Process	140
19. Modeling CO ₂ Capture Process and the Plant	143
20. Modeling Site-Wide Chemical Complex	148
21. Summary	150
Acknowledgment	150
References	151
4. Molecular Thermodynamic Models for Fluids of Chain-Like Molecules, Applications in Phase Equilibria and Micro-Phase Separation in Bulk and at Interface	153
Honglai Liu, Ying Hu, Xueqian Chen, Xingqin Xiao, and Yongmin Huang	
1. Introduction	155
2. Lattice based Molecular Thermodynamic Model of Polymer Systems	156
3. Density Functional Theory of lattice based Polymer Adsorption	176
4. Meso-Structures of Polymer Melts Confined in Curved Surfaces	184
5. Conclusions	210
Acknowledgments	213
References	213
Subject Index	219
Contents of Volumes in this Serial	229
