

CONTENTS

1. An Introduction to Industrial Biocatalysis	
1.1. Scope of Biocatalysts	3
1.2. Industrial Applications of Biocatalysts	7
2. Historical Perspective on the Industrial Uses Of Biocatalysts	
2.1. Introduction	21
2.2. Early Patents	22
2.3. Enzyme Patents	24
2.4. Enzyme Sources	26
2.5. Conclusions	31
3. Enzymatic Depolymerization of Starch	
3.1. Introduction	37
3.2. Amylase	38
3.3. Glucoamylase	44
3.4. β -Amylase	49
3.5 Other Exo-Amylases	53
3.6. Applications and Future Trends	55
4. biocatalysis in the production of Carbohydrates for Food Uses	
4.1. Introduction	63
4.2. Enzyme Technology	67
4.3. Potential Products	73
4.4. Conclusion	79
5. Biocatalysts for the Synthesis and Modification of Biopolymers	
5.1. Introduction	83
5.2. Proteins and Polypeptides	85
5.3. Polysaccharides and Oligosaccharides	90
5.4. Nucleic Acids	101
5.5. Conclusion	105
6. Lignin-Degrading Enzymes from the Filamentous Fungus Phaneochacete	
6.1. The Structure of Lignin	115
6.2. Microbial Degradation of Lignin	117
6.3. Lignin-Degrading Enzymes	119
6.4. Molecular Biology of Lignin Biodegradation	124
6.5. heterologous and Homologous Expression of Ligninases	128
6.6. Potential Applications of the Ligninases in Biopulping	129
6.7. Potential Applications of Ligninases in Metabolism of Environmental Pollutants	131
6.8. Concluding Remarks	132
7. Microbial Biocatalysis for the Alterarion of Fossil Fuels	
7.1 Introduction	137

7.2. Microduction	138
7.3. Coal Conversion	146
7.4. Microbial-Enhanced Oil Recovery	155
7.8. Conclusion	156
8. Enzymes in Organic Solvents	
8.1. Introduction	161
8.2. Effect of Water and Organic Solvents on Enzymatic in Nonaqueous Media	163
8.3. Role of Support	166
8.4. Properties of Enzymes in Organic Solvents	167
8.5. Applications of Enzymes in Organic Solvents	172
8.6. Conclusions	177
9. Catalysis by Alcohol Dehydrogenases in Organic Solvents	
9.1. Introduction	181
9.2. Model Systems for Catalysis by Alcohol Dehydrogenases	182
9.3. Factors Affecting the Catalytic Activity of ADH in Organic Solvents	185
9.4. Cofactor Regeneration between Two Different Enzymes	188
9.5. Conclusions	190
10. Lipase Catalysis and Its Applications	
10.1. Introduction	193
10.2. Lipases in Aqueous Media	194
10.3. Enzymes in Essentially Nonaqueous Media	199
10.4. Future Directions	213
11. Biocatalysis in Supercritical Fluids	
11.1. Introduction	219
11.2. Transport Properties of Supercritical Fluids	220
11.3. Other Important Supercritical Fluid Properties	221
11.4. Reactions in Supercritical Fluids	223
11.5. Examples of Enzymatic Catalysis under Supercritical Conditions	227
11.6. Biocatalysis by Whole Cells in Supercritical Fluids	233
11.7. Concluding Remarks	235
12. Protein Stabilization	
12.1. Introduction	241
12.2. Additives	243
12.3. Chemical Modification	244
12.4. Genetic Engineering	247
12.5. Enzymes Isolated from Thermophiles	250
12.6. Summary	251
13. Protein Engineering of Subtilisin	
13.1. Introduction	257
13.2. Approaches to the Engineering of Subtilisin	258

13.3. Protein Engineering of Subtilisin	264
13.4. Conclusion and Future Outlook	280
14. Catalytic Antibodies	
14.1. Introduction and Background	285
14.2. The Isolation of Antibody Catalysts	290
14.3. Engineered Antibody Catalysts	302
14.4. Prospects for the Future	304
15. Enzymatic Catalysis in Bioseparations	
15.1. Introduction	311
15.2. Single-Phase Systems	312
15.3. Multiphase Systems	315
15.4. Future Directions	322
