

CONTENTS

Preface	vii
1. Large-Scale Protein Purification : Introduction	1
2. Strategies for Large-Scale protein Purification	14
3. Separations in Biotechnology : The Key Role of Adsorptive Separations	35
4. Peptide and Protein partitioning in Aqueous Two-Phase Systems : Effect of Amino Acid Sequence	52
5. Protein Separation via Polyelectrolyte Complexation	66
6. Mechanisms of Protein Retention in Hydrophobic Interaction Chromatography	80
7. Anion Exchange Stationary Phase for β -Galactosidase, Bovine Serum Albumin, and Insulin : Separation and Sorption Characteristics	93
8. Radial-Flow Affinity Chromatography for Trypsin Purification	104
9. Impact of Continuous Affinity-Recycle Extraction (CARE) in Downstream Processing	118
10. Novel Metal-Affinity Protein Separations	139
11. Recovery of Recombinant Protein by Immunoaffinity	150
12. Chelating Peptide-Immobilized Metal-Ion Affinity Chromatography	168
13. Site-Specific proteolysis of Fusion Proteins	181
14. Purification Alternatives for IgM (Human) Monoclonal Antibodies	194
15. Analytical, Preparative, and Large-Scale Zone Electrophoresis	210
16. Applied Electric Fields for Downstream Processing	244
Author Index	271
Affiliation Index	271
Subject Index	272
