

CONTENTS

1. Large-Scale Mammalian Cell Culture	1
2. Use of Recombinant DNA Technology for Engineering Mammalian Cells to Produce Proteins	15
3. Large-Scale Animal Cell Culture: A Biological Perspective	71
4. Mammalian Cell Physiology	93
5. Cell Banking	147
6. Expression of Cloned Proteins in Mammalian Cells: Regulation of Cell-Associated Parameters	161
7. Assay Requirements for Cell Culture Process Development	179
8. Nonperfused Attachment Systems for Cell Cultivation	208
9. Perfusion Systems for Cell Cultivation	217
10. Suspension Culture of Mammalian Cells	251
11. Microcarrier Culture Systems	271
12. Microencapsulation of Mammalian Cells	343
13. Continuous Culture with Macroporous Matrix, Fluidized Bed Systems	363
14. Downstream Processing of Proteins from Mammalian Cells	393
15. Management of Process Technology	417
16. Monitoring and Control of Animal Cell Bioreactors	451
17. Methods for the Detection of Adventitious Viruses in Cell Cultures Used in the Production of Biotechnology Products	483
18. Continuous Cell Substrate Considerations	495
19. Process Validation for Cell Culture-Derived Pharmaceutical Proteins	515
20. Quality Control of rDNA-Derived Human Tissue-Type Plasminogen Activator	543
21. Design and Construction of Manufacturing Facilities for Mammalian Cell-Derived Pharmaceuticals	567
22. Large-Scale Propagation of Insect Cells	597
Index	619
