

CONTENTS

1. The Chemistry of Mesophase Formation	1
2. Chemical Characterization and Preparation of the Carbonaceous Mesophase	29
3. The Pitch-Mesophase-Coke Transformation As Studied by Thermal Analytical and Rheological Techniques	45
4. Microstructure Formation in Mesophase Carbon Fibers and Other Graphitic Materials	62
5. Electron Microscopic Observations on Carbonization and Graphitization	85
6. Residual Oil Processing: Predicting Slurry Oil and Coke Yields	99
7. Synthetic Aromatic Pitch: Aromatic Pitches from the Asphaltene-Free Distillate Fraction of Catalytic Cracker Bottoms	118
8. Synthetic Aromatic Pitch: Aromatic Pitches from the Distillate Fraction of Catalytic Cracker Bottoms and Residue Fractions	126
9. Synthetic Aromatic Pitch: Aromatic Pitch Production Using Steam-Cracker Tar	134
10. Petroleum-Coke Overview	144
11. Delayed-Coking Process Update	155
12. Petroleum-Coke Calcining Technology	172
13. New Calcining Technology of Petroleum Coke	179
14. Petroleum-Coke Desulfurization: An Improved Thermal-Chemical Process	193
15. Granular Graphitic Carbon	200
16. Carbonization and Coke Characterization	215
17. Anode-Carbon Usage in the Aluminum Industry	234
18. Utilization of Petroleum Coke in Metallurgical Coke Making	251
19. Mechanism of Carbon-Black Formation in Relation to Compounded-Rubber Properties	269
20. High-Surface-Area Active Carbon	302
21. Dispersion of Metallic Derivates on Carbon Supports	310
22. Progress of Pitch-Based Carbon Fiber in Japan	323
23. Growth of Carbon Fibers in Stainless Steel Tubes by Natural Gas Pyrolysis	335
24. Carbon-Fiber-Reinforced Carbon composites Fabricated by Liquid Impregnation	346
25. Carbon-Carbon Composites: Matrix Microstructure and Its Possible Influence on Physical Properties	380
Author Index	395
Subject Index	395
