

CONTENTS

Volume 4. Machinery (C. Nowotny) 11

Chapter 4.1 Compressors 12

4.1.1 Reciprocating compressors 14

4.1.1.1 Theory 14

4.1.1.2 Building elements 22

4.1.1.3 Lubrication 57

4.1.1.4 The drive of compressors 61

4.1.1.5 Delivery control 63

4.1.1.6 Construction of reciprocating compressors 67

4.1.1.7 Reciprocating machines without cylinder oil 84

4.1.1.8 Foundations 94

4.1.1.9 Erection 101

References to Section 4.1.1 109

4.1.2 Rotary-type displacement compressors 111

4.1.2.1 Lobe-type rotary compressors 111

4.1.2.2 The Lysholm compressor 113

4.1.2.3 The vane-type rotary compressor 113

References to Section 4.1.2 115

4.1.3 Dynamic type (turbo) compressors 115

4.1.3.1 General 116

4.1.3.2 Construction of turbocompressors 121

4.1.3.3 Turbocompressor selection 139

4.1.3.4 Examples of turbocompressor construction 140

References to Section 4.1.3 150

Chapter 4.2 Pumps 151

4.2.1 Centrifugal pumps 151

4.2.1.1 Basic principles 151

4.2.1.2 Pump components 170

4.2.1.3 Pump constructions 173

References to Section 4.2.1 181

4.2.2 Positive displacement pumps 182

4.2.2.1 Reciprocating pumps 182

4.2.2.2 Rotary pumps 204

References to Section 4.2.2 206

Volume 5. Equipment (C. Nowotny)	207
Chapter 5.1 Low-temperature equipment	207
5.1.1 Refrigeration	207
5.1.1.1 Vapour compression refrigeration	208
5.1.1.2 Absorption refrigeration	219
5.1.2 Low-temperature gas separation	220
5.1.2.1 Air separation	221
5.1.2.2 Low-temperature separation of industrial gases	234
References to Chapter 5.1	240
Chapter 5.2 Medium-pressure equipment	241
5.2.1 Reformer furnaces	241
5.2.1.1 Tubes	241
5.2.1.2 Pigtails	245
5.2.1.3 Headers and transfer lines	246
5.2.1.4 Thermal insulation	249
5.2.1.5 Convection section	251
5.2.2 Autothermal reformer	251
5.2.2.1 Burner (mixer)	253
5.2.2.2 The vessel	254
References to Chapter 5.2	256
Chapter 5.3 High-pressure techniques	257
5.3.1 High-pressure vessels	257
5.3.1.1 Design calculations	258
5.3.1.2 Construction types	268
5.3.1.3 Special constructions	285
5.3.2 Other high-pressure equipment (heat-exchangers)	300
5.3.2.1 Gas coolers	300
5.3.2.2 High-pressure waste-heat boilers	305
5.3.3 Transport and erection	307
References to Chapter 5.3	313
Chapter 5.4 Pipes and fittings	315
5.4.1 Pipes	315
5.4.2 Pipe connections	319
5.4.3 Valves	324
References to Chapter 5.4	328
Volume 6. Energetics (I. Molnár)	329
Chapter 6.1 Electric energy system	330
6.1.1 Reliability	330
6.1.2 Layout of the power-transmission system	330

Chapter 6.2	Electricity consumers	332
6.2.1	Basic principles	332
6.2.2	Three-phase asynchronous motors	334
6.2.3	Synchronous motors	335
Chapter 6.3	Selection of the electric drives	341
6.3.1	Conditions of equilibrium in electric drives	341
6.3.2	Starting of machines driven by asynchronous motors	345
6.3.2.1	Starting time	345
6.3.2.2	Indirect starting of squirrel-cage asynchronous motors	348
6.3.2.3	Asynchronous starting of synchronous motors	353
6.3.3	Comparison between synchronous and asynchronous motors	356
6.3.4	The selection of the rated voltage of the motors	357
Chapter 6.4	Substations	361
6.4.1	The selection of the busbar systems for substations	361
6.4.1.1	Non-sectionalized single-busbar	361
6.4.1.2	Sectionalized single busbar	362
6.4.1.3	Single-busbar system with reserve or transfer busbar	363
6.4.1.4	The double-busbar system	365
6.4.1.5	Sectionalized double busbars	366
6.4.2	Number of spares for distribution system transformers	368
Chapter 6.5	Distribution network of nitrogen plants	372
6.5.1	The busbar systems of central receiver stations	372
6.5.2	Distribution systems	375
6.5.3	Layout of substations in industrial plants	378
6.5.4	Protection of transmission lines and machines	379
6.5.5	Short circuits in the plant distribution system	383
Chapter 6.6	Earth faults in an industrial distribution system	384
References to Volume 6		387

Volume 7. Systems engineering (I. Nagy, G. D. Honti, I. Pallai and E. Almásy) 388

Chapter 7.1	Process instrumentation and control	390
7.1.1	Generalities	390
7.1.1.1	Information collection	390
7.1.1.2	Evaluation and decision	391
7.1.1.3	Order	392
7.1.1.4	Order execution	392
7.1.2	Instrument selection	393
7.1.3	Control action	393
7.1.3.1	Feedback control	395
7.1.3.2	Feedforward control	396

7.1.3.3	Control modes	396
7.1.3.4	Reset (integral) control	398
7.1.3.5	Rate (derivative) control mode	398
7.1.4	Controllers	400
7.1.4.1	Mechanical controllers	400
7.1.4.2	Hydraulic controllers	400
7.1.4.3	Electronic controllers	401
7.1.4.4	Pneumatic controllers	401
7.1.5	Final control elements	405
7.1.5.1	Control valve characteristics	406
7.1.5.2	High-pressure control valves	410
7.1.5.3	Butterfly valves	414
7.1.6	Process characteristics	415
7.1.6.1	Capacitance	415
7.1.6.2	Resistance	415
7.1.6.3	Dead time	416
7.1.7	Data processing	416
7.1.8	Instrument flow plan symbols	417
Chapter 7.2.	Measurement and control	420
7.2.1	Temperature	420
7.2.1.1	Measurement	420
7.2.1.2	Indication and recording	427
7.2.1.3	Control	428
7.2.2	Pressure	430
7.2.2.1	Measurement	430
7.2.2.2	Alarm and control	437
7.2.3	Liquid level	440
7.2.3.1	Measurement	440
7.2.3.2	Control	444
7.2.4	Flow	447
7.2.4.1	Measurement	447
7.2.4.2	Control	455
7.2.5	Composition	457
7.2.5.1	Sampling	457
7.2.5.2	Analysers	458
7.2.6	Solids handling	469
7.2.6.1	Flow measurement and control	469
7.2.7	Control systems	470
7.2.7.1	Ammonium nitrate production	471
7.2.7.2	Urea evaporator	472
7.2.7.3	Diammonium phosphate	474
7.2.8	Computer control (L. Pállay and G. Almásy)	478
7.2.9	Control rooms	480

Chapter 7.3. Optimization	482
7.3.1 Model construction	482
7.3.1.1 Steady-state modelling	484
7.3.1.2 Dynamic (transient) modelling	485
7.3.1.3 Model construction in the nitrogen industry	486
7.3.2 Optimization in design	498
7.3.2.1 Optimization examples	498
7.3.3 Optimization in operation	500
7.3.3.1 Steady-state optimization	502
7.3.3.2 Transient optimization	504
7.3.4 Conclusions	505
References to Volume 7	505
Books on process instrumentation and control	507
Cited papers	508
Volume 8. Layout (J. Száva and G. D. Honti)	509
Chapter 8.1 General layout rules	511
8.2 Nitrogen plant layout	512
8.2.1 Historical examples	512
8.2.2 Modern nitrogen plants	515
References to Volume 8	519
Volume 9. Future trends in nitrogen fixation (G. D. Honti)	520
Chapter 9.1 Nuclear impact	524
9.1.1 Utilization of power generated by nuclear methods	524
9.1.1.1 Nuclear power utilization by 'classical' methods	525
9.1.1.2 Plasma technology	526
9.1.2 Chemonuclear processes	527
9.1.2.1 Basic principles	527
9.1.2.2 Chemonuclear nitrogen fixation	530
Chapter 9.2 Nitrogen complex formation	535
References to Volume 9	537
