

CONTENTS

Introduction	1
Efficient Use of Waste Heat in Rectified spirit Distillation Plant	9
Recovery of Waste Heat in Power Alcohol Distillation Plant	13
Alcohol as Fuel for Diesel Engines	18
The Overall Steam Requirement in an Industrial Alcohol Distillaery	32
Vapour Re-Compression System for Steam Economy in Alcohol Distillation Plants	37
A New Design Molasses Dilutor for Distilleries	43
Proof Spirit System of Alcoholometry	45
Operational Efficiency in the Ethyl Alcohol Industry in India	49
Scaling In Wash Columns	55
Economics of Alcohol Manufacture	56
Some Aspects of the Working of a Distillery in India	58
Nutrients as Accelerator of Alcoholic Fermentation of Carbonation Molasses	67
Reeds as Potential Sources of Alcohol	73
Studies on the Saccharification of Kail Sawdust	76
Instrumentation and Automatic Control of Distillation Columns	79
A Note on Automation and Instrumentation	86
Treatment and Disposal of Distillery Wastes	88
Potash Recovery -- A Method of Disposal of Distillery Wastes and Saving Foreign Exchange	93
Preparation and Properties of a Protein Digest made from Distillery Sludge	98
Synthetic Routes to Aliphatic Organic Chemicals	105
Ethyl Alcohol vs Petrochemical Raw Materials for Organic Chemical Industries in India	110
Deterioration in the Activity of Activated Alumina During the Dehydration of Ethanol to Ethylene	117
Manufacture of Acetic Acid from Ethyl Alcohol	124
Ethyl Alcohol in the Production of Pesticide Chemicals	130
Chemicals form Alcohol	132
Summary of Proceedings of the Symposium	140
