

CONTENTS

A. The chemistry of coal and crude oil and the production of chemical raw materials and intermediates	9
I. Technology and upgrading of coal	11
II. Natural gas and petroleum	74
III. Hydrogenation of coal, tar, and crude oil	110
IV. Syntheses with carbon monoxide	132
V. Production and processing of simple paraffins and olefins	155
VI. Industrial processes for the production of various aliphatic compounds	184
VII. Acetylene production and syntheses based on acetylene	190
VIII. Aromatic intermediates	225
B. The chemical processing of raw materials produced in agriculture and forestry	273
I. Wood as a chemical raw material	276
II. Sugar, starch and glucose	316
III. The fermentation industry	333
IV. Technology of fats, oils, fatty acids and so pas	345
V. Tanning and the manufacture of leather. Tannins	361
C. The manufacture of commodities by chemical processing of natural and synthetic raw materials	369
I. Synthetic fibres	371
II. Raw materials for lacquers, plastics, elastomers, exchange resins, silicones	392
III. Textile auxiliaries and washing raw materials	436
IV. Pharmaceutical products	455
V. Protection of plants and stores (pesticides)	482
VI. Synthetic organic dyestuffs	490
VII. Explosives (gunpowder and blasting agents)	534
Subject index	543
