

CONTENTS

Chapter 1: Basic Concepts in Phase-Transfer Catalysis	1
A. Phase-Transfer-Catalyzed Reactions	1
B. Basic Steps of Phase-Transfer Catalysis	2
C. The PTC Reaction Rate Matrix	5
D. Anion Transfer and Anion Activation	6
E. Effect of Reaction Variables on Transfer and Intrinsic Rates	12
F. Outline of Compounds Used as Phase-Transfer Catalysts	18
Chapter 2: Phase-Transfer Catalysts: Fundamentals I	23
A. Introduction	23
B. Structural Factors Affecting the Distribution of Anions Between Aqueous and Organic Phases	24
C. Structural Factors Affecting the Distribution of Phase-Transfer Catalyst Cations Between the Aqueous and Organic Phases	26
D. Effects of the Organic Phase Polarity on the Distribution of Phase-Transfer Cation- Anion Pairs	29
E. Effects of Changes in Organic Phase Polarity During Reaction	31
F. Factors Affecting the Distribution of Phase-Transfer Catalyst Cation-Anion Pairs Between an Organic Phase and an Aqueous Phase Containing Hydroxide Ion	32
G. Effects of Hydration of the Transferred Anion and the Effect of Inorganic Salt and/or Hydroxide Concentration in the Aqueous Phase	40
Chapter 3: Phase-Transfer Catalysis: Fundamentals II	48
A. Introduction	48
B. Liquid-Liquid PTC	49
C. Solid-Liquid PTC	108
Chapter 4: Phase-Transfer Catalysts	123
A. Introduction	123
B. Use of Quaternary Salts as Phase-Transfer Catalysts	125
C. Macrocyclic and Macrobicyclic Ligands	153
D. PEGs, Tris (3,6-dioxahexy)amine (TDA-1), and Related Ethoxylated Compounds as Phase-Transfer Catalysts	158
E. Other Soluble Polymers and Related Multifunctional Compounds as Phase-Transfer Catalysts	171
F. Use of Dual PTC Catalysts or Use of Cocatalysts in Phase-Transfer Systems	175
G. Catalysts for Transfer Species Other Than Anions	179
H. Separation and Recovery of Phase-Transfer Catalysts	188

Chapter 5: Insoluble Phase-Transfer Catalysts	207
A. Introduction	207
B. PTC Catalysts Bound to Insoluble Resins	208
C. Phase-Transfer Catalysts Bound to Inorganic Solid Supports	248
D. PTC Catalysts Contained in a Separate Liquid Phase (Third-Liquid-Phase Catalyst)	252
Chapter 6: Variables in Reaction Design for Laboratory and Industrial Application of Phase-Transfer Catalysis	266
A. Choice of Catalyst	266
B. Choice of Solvent	303
C. Presence of Water	318
D. Agitation	319
E. Choice of Anion, Leaving Group, and Counteranion	322
F. Choice of Base	325
G. Guidelines for Exploring New PTC Applications	326
Chapter 7: Phase-Transfer Catalysis Displacement Reactions with Simple Anions	339
A. General Considerations	339
B. Behavior of Various Anions in PTC Displacement Reactions	343
Chapter 8: Phase-Transfer Catalysis Reaction with Strong Bases	383
A. C-Alkylation	384
B. N-Alkylation	400
C. O-Alkylation-Etherification	410
D. S-Alkylation-Thioetherification	418
E. Dehydrohalogenation	420
F. Carbene Reactions	424
G. Condensation Reactions	430
H. Deuterium Exchange, Isomerization, and Oxidation	438
Chapter 9: Phase-Transfer Catalysis: Polymerization and Polymer Modification	452
A. Introduction	452
B. Polymer Synthesis	452
C. Chemical Modification of Polymers	484
Chapter 10: Phase-Transfer-Catalyzed Oxidations	500
A. Introduction	500
B. Permanganate Oxidations	500
C. Oxidations with Hypochlorite and Hypobromite	508
D. PTC Oxidations with Hydrogen Peroxide	521

E. PTC Air or Oxygen Oxidations	534
F. Oxidations by Persulfates	540
H. PTC Oxidations with Nitric Acid	547
I. PTC Carbon Tetrachloride/Sodium Hydroxide Oxidations	548
J. PTC Oxidations with Periodate and Related Oxidizing Anions	549
K. PTC Oxidations with Perborate	550
L. PTC Oxidations with Ferrate and Ferricyanide	550
M. PTC Oxidations with Superoxide	551
N. PTC Electrochemical Oxidations	551
O. PTC Oxidations with Other Oxidants	552
Chapter 11: Phase-Transfer-Catalyzed Reductions	565
A. Sodium Borohydride Reductions	565
B. Lithium Aluminum Hydride Reductions	568
C. Reductions with Sodium Formate	568
D. Reductions with Sulfur-Containing Anions	569
E. Hydrogenation	570
F. Reductions with Formaldehyde	571
G. Electrochemical Reduction	571
H. Photochemical Reduction	572
I. Wolff-Kishner Reduction	572
J. Reduction by Dodecarbonyltriiron and Related Species	572
Chapter 12: Phase-Transfer Catalysis: Chiral Phase-Transfer-Catalyzed Formation of Carbon-Carbon Bonds	576
A. Introduction	576
B. Alkylation Reactions	577
Chapter 13: Phase Transfer Catalysis-Transition Metal Cocatalyzed Reactions	594
A. Introduction	594
B. Carbonylation and Reactions with Carbon Monoxide	595
B. PTC Reduction and Hydrogenation with Metal Cocatalysts	605
C. Coupling Reactions of Alkenes, Alkynes, and Alkyl Halides	613
D. Other Reactions	617
Chapter 14: Phase-Transfer Catalysis in Analytical Chemistry	622
A. The PTC/Analytical Chemistry Match	622
B. Esterification, Etherification, and other Nucleophilic Derivatizations	622
C. Non-Nucleophilic PTC Reactions Used in Analytical Chemistry	623

Chapter 15: Phase-Transfer Catalysis: Industrial Perspectives	626
A. Industrial Background	626
B. Evaluation of PTC as a Commercial Manufacturing Process Technology	626
Index	639
