

CONTENTS

I.	FUNDAMENTAL ASPECTS OF BRINE AND SALT ELECTROLYSIS	1
	1. General	
	2. Decomposition Voltage	
	3. Current Efficiency	
	4. Working Voltage	
	5. Energy Efficiency	
	6. Cell Output	
	7. Energy and Fuel Consumption	
	8. Cell Design and Operating Conditions	
II.	RAW MATERIALS AND ENERGY	18
	1. Brine and Salt	
	2. Energy	
III.	THE MANUFACTURING PROCESSES	21
	1. Mercury Cell Process	
	2. Diaphragm Cell Process	
	3. Downs Sodium Process	
	4. The Cell-Room: Arrangement of the Cells	
	5. Liquefaction of Chlorine	
	6. Concentration of Caustic Liquor	
	7. Chlorate and Hypochlorite Manufacture	
IV.	PACKING, STORAGE, AND TRANSPORT OF THE PRODUCTS	49
	1. Chlorine	
	2. Caustic Soda	
	3. Sodium	
V.	PRODUCTION STATISTICS AND TRENDS	54
	1. Chlorine	
	2. Caustic Soda	
	3. Sodium	
	4. Caustic Potash	
	5. Types of Cells Used	
	6. The Chlorine-Caustic Soda Balance	

VI.	PHYSICAL AND CHEMICAL PROPERTIES OF THE PRODUCTS	63
	1. Chlorine	
	2. Caustic Soda	
	3. Sodium	
	4. Caustic Potash	
	5. Sodium Chlorate	
VII.	PRINCIPAL USES OF THE PRODUCTS	70
	1. Chlorine	
	2. Caustic Soda	
	3. Sodium	
	4. Caustic Potash	
	5. Hydrogen	
	6. Sodium Chlorate	
VIII.	OUTLINE OF HISTORICAL DEVELOPMENT	75
	1. Non-electrolytic Manufacture of Alkali and Chlorine	
	2. Early Development of Electrolysis	
	3. Diaphragm Cells	
	4. Mercury Cells	
	5. Castner Sodium Cell	
	6. Electrolysis of Fused Salt	
	7. The Chlorine and Alkali Industries	
APPENDIX I		82
	Chronology of Early Development of Electrolytic Manufacture of Chemicals from Salt	
APPENDIX II		86
	Explanation of Technical Terms and Definitions of Units	
BIBLIOGRAPHY		91
